Description

Desco Statshield® Moisture Barrier Bags combine the properties of a MOISTURE BARRIER protection with EMI-RFI-ESD shielding. Statshield® Moisture Barrier Bags meet the electrical and physical requirements of ANSI/ESD S20.20, Packaging standard ANSI/ESD S541, and Static Control Bag ANSI/ESD S11.4. All Statshield® Moisture Barrier Bags are amide, amine, and silicone free and pass outgassing and corrosion tests. All bags are printed with ESD protective symbol and the Moisture-Sensitive Identification Label and are dated and lot coded for quality control traceability.

All three styles are available in a variety of standard sizes, custom sizes and with custom printing.

Desco offers three styles of Moisture Barrier Bags:

Construction

Desco's Statshield® Moisture Barrier Bags

manufactured from a static dissipative metalized laminated film. The metal layer of the Desco's Statshield® Moisture Barrier Bags and Statshield® High Moisture Barrier Bags is created by vacuum deposited manufacturing technique. This manufacturing technique allows for a more flexible finished bag that is less likely to tear or rip during use. Finished bags with foil layer, such as Desco's Statshield® Foil Moisture Barrier Bags provides a better moisture barrier and is a good choice when having to meet IPC/JEDEC J-STD-033 Standard.

Dry Packing Information

The Statshield® Moisture Barrier Bag, Desiccant Packs and Humidity Indicator Cards have been developed for use in "DRY PACKAGING" applications. In order for the MBB bag and its accessories to perform properly, Desco recommends the user follow procedures defined in IPC/JEDEC J-STD-033B.

DESICCANT

Desiccant is a drying agent used to lower the moisture content of air within a closed space, such as a sealed Moisture Barrier bag. Desiccant is packaged in fractional units in order to facilitate its usage with a variety of bag sizes. One full "unit" of packaged desiccant will absorb the following quantities of water at equilibrium with air at 77°F (25°C): 3.00 grams @ 20% rH and 6.00 grams @ 40% rH, when tested to MIL-D-3464.

Figure 4. Desiccant packs

In order to provide a complete moisture barrier packaging system, desiccant must be inserted into the bag, prior to having the bag vacuum sealed. The recommended amount of desiccant is dependent on the interior surface area of the bag to be used. Figure 5 is a reference table indicating recommended minimum amounts of desiccant that should be used with Moisture Barrier Bags.

INTERIOR BAG SURFACE AREA	NUMBER OF DESICCANT UNITS		
	*MIH <20%	MIH <30%	MIH < 40%

HUMIDITY INDICATOR CARDS

Humidity Indicator Cards contain chemically impregnated, humidity sensitive, indicating spots that will change color with moisture. The comparison bar is used to determine relative humidity of air. Select the indicating spot that most closely matches the color of the comparison bar. The measured relative humidity is the percentage indicated on the matching spot. The chemical reaction of the indicating spots is completely reversible; the spots will continue to change color as the moisture levels change.
