

13A Switchsockets

Standard and Non Standard
13A Switchsockets
with Clean Earth Facility

*Please leave this leaflet with the
end user for future reference*

The Switchsockets have two independent earth terminals so they can be used for 'clean earth' as well as conventional earth installations.

The Non Standard Switchsockets are for use on installations where restricted access is required and will only accept MK LN647 13A Non Standard Plug with 'T' shaped earth pin.

If in any doubt please contact
MK Technical Sales Service Department.
Telephone 01268 563720.

A. Conventional Earth Installation

The earth conductors may be connected to either or both earth terminals.

Ensure Earth Wire Link remains fitted as supplied, i.e. providing a connection between the terminals marked  and .

B. Clean Earth Installation.

Earth Wire Link must be removed.

The functional 'clean earth' should be connected to the terminal marked .

The circuit protective conductor and any metal box bonding earth should be connected to the terminal marked .
