### **[Industrial Control Equipment] Programmable Controllers - Component**

The devices covered under this category are incomplete in certain constructional features or restricted in performance capabilities and are intended for use as components of complete equipment submitted for investigation rather than for direct separate installation in the field. THE FINAL ACCEPTANCE OF THE COMPONENT IS DEPENDENT UPON ITS INSTALLATION AND USE IN COMPLETE EQUIPMENT SUBMITTED TO UNDERWRITERS LABORATORIES INC.

This category covers programmable industrial control systems utilizing a programmable memory for internal storage of user oriented instructions for specific functions such as logic, sequencing, counting, and controlling various industrial equipment through digital or analog inputs or outputs. This category also includes power supplies, central processing units, input and output accessories, computer interfaces and programming or program diagnostic units associated with programmable control systems.

The basic standard used to investigate products in this category is UL 508 "Industrial Control Equipment" .

Products Recognized under the Component Program are identified by significant markings, consisting of the manufacturer's identification and catalog, model or other product designation, which correspond with the marking specified in the Laboratories published records. Only those components which actually carry the "Marking" shown in the individual Recognition should be considered as being covered under the Component Program. In addition, component products which are produced under the UL Component Recognition Program also bear the Recognized Component Mark.

The Listing Mark of Underwriters Laboratories Inc. is not authorized for use on, or in connection with, Recognized Components.
