EAGLE[®]

POLYURETHANE BELTING & O-RINGS

The possibilities are endless with Eagle Polyurethane & Polyester Belting and O-Rings from Fenner Drives. As a world leader in belting, we have a comprehensive range of high quality non-reinforced and reinforced products. From light, medium or heavy duty conveying to custom profiles, Fenner Drives has the right product for your application.

Food Grade Belting

Eagle® FDA Compliant Polyurethane Belting

Over 400 of our Eagle Belting products are FDA compliant. Choose from a broad range of durometers, colours and profiles for the right product for your application. FDA compliancy is dependent upon these three primary principles:

Materials

Only supplier certified FDA compliant materials per regulations CFR 21 177.1680, CFR 21 177.2600 and CFR 21 178.3297 are used to manufacture Fenner Drives FDA compliant Eagle Belting.

Good Manufacturing Processes (GMP)

Fenner Drives FDA compliant Eagle Belting is manufactured in accordance to CFR 21 110. The products are comprised of raw materials that are traceable by lot number and are manufactured via controlled processes to eliminate contamination from handling and environmental conditions.

Testing

Fenner Drives FDA compliant Eagle Belting is independently tested and verified to meet FDA standards for direct food contact per regulations CFR 21 177.1680 and CFR 21 177.2600

Look for a † by the product name in the Product Range Chart (pg. 46-47) to designate FDA compliancy. Need help choosing the right Eagle product? Our Application Engineers are here to help!

Eagle® Blue 80 MD: Metal Detectable Polyurethane Belting

- Developed specifically for food processing.
- Independently tested and verified to meet FDA standards for direct food contact.
- Designed to be detected by standard metal detectors utilized to ensure food safety.
- Available in Round and V- profiles.

Eagle® EC Belting: Premium Belting for Direct Food Contact

- Independently tested and verified to meet the requirements of European Regulation 10/2011 (and the legislation which it replaces; Commission Directive 2002/72/EC) within the framework defined by the Regulation 1935/2004/EC (27/10/2004) relating to plastic materials and articles intended to come into direct contact with foodstuffs.
- Suitable for repeat use food contact at temperatures up to 40°C (104°F) over a period of up to one hour with all food types having a pH of greater than 4.5.
- When used in a range of “typical” process environments, Eagle EC belting will not transfer its components into food in quantities that could endanger human health, change the composition of the food in an unacceptable way or deteriorate the taste and smell of foodstuffs.
- Available in Blue 80 EC and Clear 80 EC in Round, V- or T-Top profiles, and Blue 80 EC Quick-Connect.

Non-Reinforced Polyurethane Belting

Eagle Blue 80 EC
Eagle Clear 80 EC
Eagle Blue 80 MD
Eagle Brown 80
Eagle Opaque 80
Eagle Blue 85
Eagle Clear 85
Eagle Ivory 85
Eagle Orange 85
Eagle Red 85
Eagle Green 89
Eagle Green 89 T
Eagle Red 90
Eagle Beige 95
Eagle Clear 95

Eagle® Non-Reinforced Polyurethane Belting — the proven workhorses for material transfer and light-duty power transmission applications.

- Solid polyurethane construction
- Round, V- and flat profiles
- Excellent abrasion resistance
- Self tensioning — no take-ups required
- Easily welded on site with a Fenner Drives Welding Kit

Non-Reinforced Quick-Connect Belting

Eagle Blue 80 EC QC
Eagle Blue 85 QC
Eagle Clear 85 QC
Eagle Red 85 QC
Eagle Yellow 85 QC
Eagle Clear 85 TOR

Eagle® Non-Reinforced Quick-Connect Polyurethane Belting — the quick and easy way to avoid conveyor and system downtime — no welding required.

- Ideal quick fixes — zero downtime products
- Twisted O-Rings (TOR) are an ideal fast fit solution for live roller conveyors
- Twisted loop construction packaged with metal hooks. Plastic hooks also available.
- Quick-Connect (QC) round hollow construction packaged with metal connectors
- No need to dismantle drive components
- Custom colours and durometers available to order

6 Factory Welded Endless Belts

Eagle Endless O-Rings and Fabricated Belts

Eagle® Endless O-Rings and Fabricated Belts — let us do the work for you and take the hassle out of fabricating your own endless belts.

- Available in all Eagle Belting colours and durometers except Can Cable
- O-Rings for line shaft, live roller and motion transfer conveyors
- High coefficient of friction
- Elastic with excellent memory
- Popular $\frac{1}{8}$ ", $\frac{3}{16}$ ", $\frac{1}{4}$ ", 5mm and 6mm sizes in stock
- Additional sizes, colours and durometers are made to order
- Rapid order turnaround for all specials

Reinforced Polyurethane Belting

Eagle Opaque 80 R
Eagle Hyfen 85 R
Eagle Ivory 85 R
Eagle Orange 85 R
Eagle Green 89 R
Eagle Green 89 RT
Eagle Beige 95 R
Eagle Hyfen 95 R

Eagle® Reinforced Polyurethane Belting — the ideal high-strength, low-stretch choice for longer conveyor lengths, heavier conveyed loads, or medium-duty power transmission applications.

- For more highly loaded applications
- Polyester cord or tape reinforcement
- High strength — low stretch
- Round, V- and Twin V- profiles
- Can be cogged for increased flexibility
- Reinforced belting is not self-tensioning — take up the slack with a Fenner Drives T-Max Belt & Chain Tensioner®

Eagle White 40D
Eagle Blue 55D

Eagle® Polyester Belting — a low-stretch, hard-wearing option. Ideal for conveying heavy or abrasive materials over short or long conveyor lengths.

- Made from solid polyester
- Low stretch characteristics
- Ideal for longer spans
- Ideal for conveying heavy materials
- Lower coefficient of friction than polyurethane
- Allows for accumulation while conveying
- Not self-tensioning — take up the slack with a Fenner Drives T-Max Belt & Chain Tensioner®

Reinforced Can Cable

Eagle Red 50D CC LCF
Eagle Blue 55D CC
Eagle Blue 55D
Aramid CC
Eagle Natural 55D CC
Eagle Green 63D CC
Eagle Natural 63D CC

Eagle® Reinforced Can Cable — when canning lines go down, don't call in the wire splicing team and wait; weld our Can Cables endless in minutes yourself!

- Blue, Green and Natural are 100% polyester reinforced with high tensile cord; Red is a Fenner Drives engineered proprietary polymer blend
- Blue 55D Aramid is 100% polyester with high strength Aramid cord reinforcement
- High performance, low cost alternative to steel cables
- Fast installation — a zero downtime product
- Easily welded endless on site with Fenner Drives Overlap Welding Kit
- Eagle Red 50D has a lower coefficient of friction (LCF)
- Popular 3/8" (9.5mm) diameter cable always in stock
- Other sizes and colours made to order

Eagle Red 85 CFX
Eagle Hyfen 85 CFX®
Eagle Hyfen 85 CXR®

Eagle® Red 85 & Reinforced Hyfen 85 Co-Extruded Polyurethane Belting — provides extra grip and cushioning for flat or inclined conveyors.

- Non-reinforced and reinforced versions
- Ultra-grip co-extruded 60A top surface
- Tough 85A base
- Flat (CXF) and ribbed (CXR) top surfaces available
- V- and Twin V- profiles
- Integrally bonded top cannot delaminate
- Outperforms all adhesive-bonded special surface belts
- Reinforced belting is not self-tensioning — use a T-Max Belt & Chain Tensioner® from Fenner Drives

SuperGrip Top Belting

A variety of colours, durometers, and top surfaces are available.

Eagle® SuperGrip Top (SGT) Belting — incorporating high grip, low wear top surfaces. Ideally suited for ceramic, wood processing and corrugated conveying applications.

- Polyurethane 85A, 89A, and 90A base durometers
- Polyester 40D base durometer
- Non-reinforced (SGT) and reinforced (RSGT) versions
- PVC SuperGrip Top for high grip — non-abrasive materials
- Polyurethane (PU) SuperGrip Top for heavier duty — highly abrasive materials
- Proprietary Thermoplastic Elastomer (TPE) SuperGrip Top with almost identical grip of PVC and wear of polyurethane
- Integrally bonded top cannot delaminate
- Custom base and top surfaces available on request

Work one on one with our design engineers to develop an optimum solution

Eagle® Custom Belting — our product design and engineering teams work with you to develop the correct belt profile and optimum material selection for your specific application.

- Dual durometers — a variety of options are available to utilize the best properties of two different polyurethane materials
- Static dissipative and UV stabilized material options
- Tracking features to fit unique pulleys and drive configurations
- Ridged profiles for reduced product contact surface
- Special grip top surfaces for a variety of direct conveying applications
- Larger surface areas to lower unit pressure on heavy or sensitive product surfaces

Welding Kits

EAGLE FREESTYLE[®] BY FENNER DRIVES

Cordless belt welding in the palm of your hand!

- Quick, effective welds for Eagle Non-Reinforced polyurethane belting
- Weld anywhere, any time – no plug required during welding
- Four specialty rechargeable batteries and charger included with kit – two to use, and two to spare

Patent No. 7,730,921 B2

Kit Includes:
Welder
Flat Plate Adapters
Professional Battery Charger
(4) D Cell NiMH Batteries
Blade Release Tape
Cutting Shears
Flash Cutters
Tool Bag

See the video demonstration at
www.youtube.com/FennerDrives
 Scan or click the code below!

BUTT WELDING

- Fast, economical way to join all Eagle Non-Reinforced and some Reinforced polyurethane belting
- Unique, reliable, easy-to-use clamping tool ensures proper belt-end alignment
- 75mm (3") hot knife available for larger profiles
- Available in 115 V or 240 V kits

Kit Includes:
Hot Knife
Large Clamp
or Mini Clamp
Flash Cutters
Cutting Shears
Carrying Case

Mini Clamp

OVERLAP WELDING

- Specifically designed to weld your Eagle Reinforced polyurethane and Can Cable belting
- Strongest weld you can make in the field, yet still flexible
- Proper weld delivers 100% of belts' maximum working load
- Smooth surfaces will not damage transferred product
- Available in 115 V or 240 V kits

Kit Includes:
Welder
Control Box
Set of Dies
Flash Cutters
Cutting Shears
Carrying Case

Flash Cutters & Cutting Shears

Eagle® Belting provides solutions for all sorts of applications in virtually every industry. For inspiration on how we can solve your application problem, here's just a small sampling of our belting products at work. Not sure what you need? Contact us for advice on your specific application.

1. *Eagle® Hyfen Ridge-Top on a pop-up diverter conveying wood products.*
2. *Eagle Hyfen on a tray conveyor system, such as found in cafeterias, hospitals, etc.; chosen for its high strength, low stretch characteristics on long centre distances.*
3. *Wood panels being moved by Eagle Opaque 80; chosen for its non-marking characteristics.*
4. *Eagle Green 89 T, with its excellent abrasion resistance, is a great choice for conveying egg cartons.*
5. *Eagle Blue 80 EC, approved for direct food contact, used on tomato packaging line.*

6. *Eagle® Red 90 moving roofing tile; chosen for its excellent abrasion resistance.*
7. *Eagle Twisted O-Rings easily installed without dismantling line shaft.*
8. *Eagle Orange 85 belts driving the roller conveyor.*
9. *Custom Eagle White profile for pear sorting machine.*
10. *Co-extruded reinforced Eagle Hyfen 85 CXF® on conveying system. Lower durometer top surface increases coefficient of friction for excellent grip to convey or move products.*

1. *Eagle® EC Blue 80 is certified for repeat use food contact, perfect for this pizza conveyor.*
2. *Non-marking Eagle Ivory SGT with a polyurethane top surface carries ceramic tiles up an incline for further processing.*
3. *Eagle Natural Can Cable transports soft drink cans in the manufacturing and filling process, providing a low cost alternative to steel cables.*
4. *A light bulb conveyor uses Eagle Orange 85 5/16" round to safely move light bulbs.*
5. *Eagle Orange 85 on egg conveyor.*
6. *This hot dog conveying machine is fitted with Eagle Orange 85 Flat. In one section of the process, the belt flexes into a vee-shape to guide product consistently.*

Eagle Blue 80 EC and Eagle Blue 85 Quick-Connect Belting packaged with a pack of stainless steel connectors; all other Quick-Connect packaged with aluminum.

QC Connectors

	Aluminum		Stainless Steel	
3/16" and 5mm	4935009	25/pack	L04CON5T	10/pack
1/4" and 6–7mm	L04CON6S	25/pack	L04CON6T	10/pack
5/16" and 8mm	L04CON8S	25/pack	L04CON8T	10/pack
3/8" and 10mm	L04CON10S	20/pack	L04CON10T	10/pack
1/2" and 12–13mm	L04CON13S	20/pack	L04CON13T	10/pack
5/8" and 16mm	4935030	15/pack	–	–

All belting sold in 100'/30.5m lengths, except Can Cable (sold in 500' lengths).

May be subject to minimum order. Consult factory for availability.

Dimensions are for reference only.

5700613	C/22 Die Set
5700460	D Hyfen Die Set
5700480	A Die Set for Hyfen CXF and CXR
5700472	B Die Set for Hyfen CXF and CXR
5700476	C Die Set for Hyfen CXF and CXR
5700474	D Die Set for Hyfen CXF and CXR

Overlap Welder availability may be subject to minimum purchase of reinforced belting. Consult factory for details.

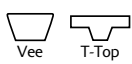

All belting sold in 100'/30.5m lengths, except Can Cable (sold in 500' lengths).

May be subject to minimum order. Consult factory for availability.

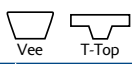

Dimensions are for reference only.

Eagle Ivory 85 SGT PU

DESCRIPTION
Trapezoidal, Non-Reinforced
with Integrally Bonded Top

← nominal 4mm
Add 4mm nominal to listed
height for total belt height.

Vee - SGT

HARDNESS
85A with 70A PU Top
FDA COMPLIANT
No

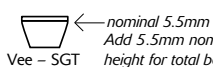

COEFFICIENT OF FRICTION
Stainless Steel .70
Steel .60
UHMW .45

Eagle Ivory 85 SGT PVC

DESCRIPTION
Trapezoidal, Non-Reinforced
with Integrally Bonded Top

← nominal 5.5mm
Add 5.5mm nominal to listed
height for total belt height.

Vee - SGT

HARDNESS
85A with 50A PVC Top
FDA COMPLIANT
No

COEFFICIENT OF FRICTION
Stainless Steel .70
Steel .60
UHMW .45

TEMPERATURE RANGE

Round Belts

Eagle round belts are commonly run in pulleys with a round groove; see Figure 2a. In the absence of round groove pulleys, they can also be used in V-groove pulleys (Figure 2b). The table at right shows the dimensional data for a round belt used in a V-groove pulley.

Figure 2a

C/22	Over 12.00" D.D.	38°	5/8"	.895	.226	.149

Note: above dimensions are belt fit in groove under no tension. Dimensions in inches unless otherwise indicated.

Flat Belts

All flat belts have a natural tendency to move laterally. Therefore a flat or straight pulley is not recommended, as the belt would walk off the pulley. To keep the belt in the centre of the pulley it must have a crown. Figure 3a illustrates a round crown and is the preferred method. A modified round crown as illustrated in Figure 3b is also acceptable. A flat pulley with guide flanges (Figure 3c) is not recommended. Even with the guide flanges the belt will move laterally and potentially could climb up onto them.

Figure 3a

Figure 3b

Figure 3c

Engineering Data — Metric Pulley Sections

V-Belts

Eagle® V-belts in “classical” Z/10, A/13, B/17, C/22 and D/32 cross sections are designed to fit ISO and DIN 2215 compliant pulleys as per the groove details illustrated in Figure 1.

Figure 1

Cross Section	Datum Diameter Range	Groove Angle	b_g (mm)	h_g Min (mm)	S_g (mm)	S_e (mm)

Dimensions are in millimetres unless otherwise indicated.

Flat Belts

All flat belts have a natural tendency to move laterally. Therefore a flat or straight pulley is not recommended, as the belt would walk off the pulley. To keep the belt in the centre of the pulley it must have a crown. Figure 3a illustrates a round crown and is the preferred method. A modified round crown as illustrated in Figure 3b is also acceptable. A flat pulley with guide flanges (Figure 3c) is not recommended. Even with the guide flanges the belt will move laterally and potentially could climb up onto them.

Figure 3a

Figure 3b

Figure 3c

Belt Installation Tension

All belts require a certain amount of tension to function properly in the application. The specific installation tension is determined from several factors including belt type, construction and working load. Belt details are in the Technical Data section of this catalog and working load is derived from your application.

Non-Reinforced Belting: When non-reinforced belting is stretched and released, elasticity is the property that brings the material back to its original shape. This "memory" is what gives our non-reinforced belting its self-tensioning properties. When a non-reinforced belt is first installed (stretched) the material does not return to 100% of its original length and continues to lose elasticity over its life span. This loss in elasticity is evident as tension decay. To overcome tension decay effects, a non-reinforced belt requires a relatively high install tension. Installation tensions ranging from 6% to 10% will normally be sufficient for most applications. If higher tensions are required, the application may exceed the belt's load capacity.

Reinforced Belting: Reinforced belts contain a reinforcing tensile member which increases the belt's modulus of elasticity. This reduces the belt's ability to stretch and minimizes tension decay. This allows a reinforced belt to carry a greater load than a non-reinforced belt. Since an endless reinforced belt is essentially a fixed length, it cannot be stretched on like a non-reinforced belt. Consequently, reinforced belts require a mechanical take-up mechanism to apply the appropriate installation tension as well as accommodating any eventual small amount of tension decay that may occur. This mechanism should accommodate at least 4% of the belt's length.

Belt Installation Length

In this section, we will refer to two different lengths that are defined as follows:

1. **Reference Length:** The length determined by taking a measuring tape and following the path of the belt around all of the pulleys, or through computer aided design (CAD) techniques. This length may also be obtained from the equation below. Take up mechanisms should be adjusted to the minimum position to allow for maximum adjustment of the belt prior to taking or calculating length. Note: this equation applies to two-pulley drives only.

$$L = 2C + \frac{\pi}{2}(D + d) + \frac{(D - d)^2}{4C}$$

where: L = reference length
C = centre of pulley shaft to centre of pulley shaft distance
D = pitch diameter of large pulley
d = pitch diameter of small pulley

2. **Cut Length:** The length the belt is cut to prior to welding.

Apply the following formulas to determine the Cut Length from Reference Length:

Butt weld non-reinforced:

$$\text{Cut Length} = \text{Reference Length} \div (1 + \% \text{ tension})$$

Example: Reference Length for a non-reinforced belt is 44" (1120mm), requires 8% tension and will be butt welded. Cut Length is calculated on right.

$$\begin{array}{ll} \text{Cut Length} = 44" \div (1 + 8\%) & \text{Cut Length} = 1120\text{mm} \div (1 + 8\%) \\ = 44" \div 1.08 & = 1120\text{mm} \div 1.08 \\ = 40.7" & = 1037\text{mm} \end{array}$$

Overlap weld reinforced: $\text{Cut Length} = \text{Reference Length} + 1.5" (38\text{mm})$

Example: Reference Length for a reinforced belt is 44" (1120mm) and will be overlap welded. The overlap weld consumes 1.5" (38mm) of belt length. Cut Length is calculated on right.

$$\begin{array}{ll} \text{Cut Length} = 44" + 1.5" & \text{Cut Length} = 1120\text{mm} + 38\text{mm} \\ = 45.5" & = 1158\text{mm} \end{array}$$

Butt weld reinforced: $\text{Cut Length} = \text{Reference Length}$

Example: Reference Length for a reinforced belt is 44" (1120mm) and will be butt welded. The weld consumes a negligible amount of belt length, consequently, Cut Length and Reference Length are the same. Cut Length is calculated on right.

$$\begin{array}{ll} \text{Cut Length} = 44" & \text{Cut Length} = 1120\text{mm} \end{array}$$

Temperature

The temperature range of polyurethane belting is determined by the thermoplastic resin. Like all thermoplastic resins its physical properties change with changes in temperature. At higher temperatures the material will soften, lose strength and can elongate excessively to the point of premature failure. At lower temperatures the material will become more brittle and stiff which can result in cracking. The temperature ranges are for guidance and listed under each individual belt type in the Technical Data section.

Minimum Pulley Diameter

The most common serious mistake in designing belt drives is the selection of a pulley diameter that is too small. In most cases, non-reinforced belts can operate on smaller diameter pulleys than belts with a reinforcing tensile member. Reinforced belts require a larger pulley diameter to prevent premature flex fatigue failure of the tensile member. Listed under each individual belt type in the Technical Data section is the recommended minimum pulley diameter. Smaller diameters can be used only if a reduction in belt service life is acceptable.

Belt Profile Tolerances

Round Belts:

Up to and including 3/16" (5mm) diameter:	± .005" (± 0.13mm)
Over 3/16" (5mm) up to and including 1/4" (7mm) diameter:	± .007" (± 0.18mm)
Over 1/4" (7mm) up to and including 9/16" (15mm) diameter:	± .010" (± 0.25mm)
Over 9/16" (15mm) up to and including 5/8" (18mm) diameter:	± .012" (± 0.30mm)
Over 5/8" (18mm) diameter:	± .015" (± 0.38mm)

Flat and V-Belts:

All profiles: ± .015" (± 0.38mm)

If tighter tolerances are required, consult Fenner Drives Applications Engineering Group with your requirements.

Engineering Data — Selection Procedure, Conveying

- Refer to the Technical Data chart for the belt material and cross section selected.
- Use the following formula that meets your application requirements (Note: if belt supported by rollers use .17 for μ):
 - Horizontal Transport with Slider Bed

$$T_e = W_t \times \mu + B_{wt}$$
 - Horizontal Transport with Slider Bed and Product Accumulation

$$T_e = W_t \times \mu + B_{wt} + A_{wt}$$
 - Incline or Decline Transport with Slider Bed

$$T_e = \frac{W_t}{C} \times (H_t + \mu \times \sqrt{C^2 + H_t^2}) + B_{wt}$$
 - Incline or Decline Transport with Slider Bed and Product Accumulation

$$T_e = \frac{W_t}{C} \times (H_t + \mu \times \sqrt{C^2 + H_t^2}) + B_{wt} + A_{wt}$$
- Determine Tight Tension (T_1).
 Flat and round belts: $T_1 = T_e \times 2$
 V-belts: $T_1 = T_e \times 1.25$
- Refer to the Technical Data chart for the material and cross section selected and compare T_1 to the Working Load at maximum % tension. If only one belt is desired, T_1 may not be greater than the Working Load at maximum % tension. If more than one belt is required, divide T_1 by the Working Load at maximum % tension to arrive at number of belts. Round up to the nearest whole number of belts.
- Find load per belt by dividing T_1 by number of belts. From the Technical Data chart, determine the percent installed tension for the load per belt.

Where:

T_e = Effective Tension

W_t = Total Weight on Conveyor

C = Conveyor Centre Distance

B_{wt} = Belt weight/unit length $\times C$

A_{wt} = Accumulating weight $\times \mu'$
 (where μ' is the COF between belt and product)

H_t = Incline or decline height

μ = COF on slider bed material from chart

To determine the required belt length, please refer to the "Belt Installation Length" section on the previous page.

Engineering Data — Selection Example

Eagle Orange 85		HARDNESS		COEFFICIENT OF FRICTION		TEMPERATURE RANGE							
DESCRIPTION Round, Non-Reinforced		85A		Stainless Steel .70		-22°F to +150°F							
		FDA COMPLIANT Yes		Steel .60		-30°C to +66°C							
				UHMW .45									
Cross Section	Part Number	Dimensions Ø (in) (mm)	Minimum Pulley Ø (in) (mm)	Working Load @ Percent Tension								Wt/ft (lbs)	Wt/m (kg)
				4%		6%		8%		10%			
				(lbs)	(N)	(lbs)	(N)	(lbs)	(N)	(lbs)	(N)		
6mm	L04OG856M	6	1.89 48	1.7	7.7	2.7	11.8	3.5	15.8	4.4	19.4	0.023	0.034
1/4"	1032008	1/4 6.3	2.00 51	1.9	8.6	3.0	13.3	4.0	17.7	4.9	21.9	0.026	0.038

Example 1

Type of belt being considered = Eagle Orange 85 in 1/4" round

Head-to-tail centre distance (C) = 10 feet

Incline or decline = none

Product accumulation on belt(s)? = none

Total weight on belt(s) = 15 lbs.

Type of belt support = UHMW slider bed

- Horizontal Transport with Slider Bed.

Since the belt will run in UHMW slider bed the COF(μ) of .45 is used from Technical Data chart. From the chart the belt weight is .026 lbs/ft giving a total belt weight of .26 lbs (.026 \times 10').

$$T_e = 15 \text{ lbs} \times .45 + .26 = 7.01$$

- Determine Tight Tension (T_1).

$$\text{round belts } T_1 = 7.01 \times 2 = 14.02$$

- Refer to the Technical Data chart for the material and cross section selected and compare T_1 to the Working Load at 10% tension.

If only one belt is desired, T_1 may not be greater than the Working Load at 10% tension. If more than one belt is required, divide T_1 by the Working Load at 10% tension to arrive at number of belts. Round up to the nearest whole number of belts.

$$1/4" \text{ round rated } 4.9 \text{ lbs @ } 10\% \text{ tension. } 14.02 \div 4.9 = 2.86 \text{ use } 3 \text{ belts}$$

- Find load per belt by dividing T_1 by number of belts. From the Technical Data chart, determine the percent installed tension for the load per belt.

$$\text{Load/belt} = 14.02 \div 3 = 4.67 \text{ lbs}$$

$$\text{corresponding installed tension} = 9.7\%$$

Example 2

Eagle Orange 85 in 6mm round

Head-to-tail centre distance (C) = 3 metres

Incline or decline = none

Product accumulation on belt(s)? = none

Total weight on belt(s) = 6 kg

Type of belt support = UHMW slider bed

- Horizontal Transport with Slider Bed.

Since the belt will run in UHMW slider bed the COF(μ) of .45 is used from Technical Data chart. From the chart the belt weight is .034 kgs/m giving a total belt weight of .102 kg (.034 \times 3M).

$$T_e = 6 \text{ kg} \times .45 + .102 = 2.802 \text{ kg}$$

- Determine Tight Tension (T_1).

$$\text{round belts } T_1 = 2.802 \times 2 = 5.604 \text{ kg} = 54.98 \text{ Newtons (} 5.604 \times 9.81 \text{)}$$

- Refer to the Technical Data chart for the material and cross section selected and compare T_1 to the Working Load at 10% tension.

If only one belt is desired, T_1 may not be greater than the Working Load at 10% tension. If more than one belt is required, divide T_1 by the Working Load at 10% tension to arrive at number of belts. Round up to the nearest whole number of belts.

$$6 \text{ mm round rated } 19.4 \text{ kg @ } 10\% \text{ tension. } 54.98 \div 19.4 = 2.83 \text{ use } 3 \text{ belts}$$

- Find load per belt by dividing T_1 by number of belts. From the Technical Data chart, determine the percent installed tension for the load per belt.

$$\text{Load/belt} = 54.98 \text{ N} \div 3 = 18.33 \text{ Newtons}$$

$$\text{corresponding installed tension} = 9.6\%$$

Chemical Resistance Chart

Polyurethane is extremely resistant to many industrial oils and chemicals, but not all. Below are a wide variety of oils and chemicals found in industrial applications. Consult Fenner Drives Applications Engineering group for assistance on projects with design criteria outside these parameters, or obtain a sample belt and determine its compatibility in the precise operating conditions.

Rating Key

A - Fluid has little or no effect

B - Fluid has minor to moderate effect

C - Fluid has severe effect

Frequently Asked Questions

Q I will be using Eagle® Belting in a high humidity environment. Will this affect the life of the belting?

A High humidity will have some effect, although not believed to be significant, on the belt life.

Q I have an application involving 200°F/93°C temperature. Can I use your polyurethane belting?

A Our Eagle polyurethane products are usually limited to 150°F/66°C (see Eagle Technical Data Brochure for details). At higher temperatures the polyurethane softens and loses strength, resulting in excessive stretch. However, Fenner Drives' PowerTwist Plus® should be considered as an option.

Q My application involves washdown. What effect will it have on the belt?

A Polyurethane is resistant to water and many industrial chemicals, but not resistant to all. Consult the Eagle Technical Data Brochure for chemical resistance information or contact Fenner Drives Applications Engineering group with the contaminants present and we will make a recommendation.

Q The standard profiles shown do not appear to suit my needs. Do you make special profiles?

A Yes! At Fenner Drives, we welcome the opportunity. Contact Fenner Drives Applications Engineering group at ae@fennerdrives.com for assistance.

For any questions about our extensive line of products, just call 1-800-243-3374 or +44 (0)870 757 7007 and your Customer Support Specialist will help you.

Q Are Eagle® Polyurethane and Polyester belting products REACH compliant?

A Most of our products do not contain substances listed as hazardous in the REACH Regulation. Please visit www.fennerdrives.com/ehs for further information.

Q I plan on using a B/17 section polyurethane belt. Will your belt fit pulleys that I can buy from numerous power transmission distributors?

A Yes. All of our "classical" polyurethane belts, i.e. Z/10, A/13, B/17, C/22 and D/32, are designed to fit RMA/BS/DIN/ISO compliant pulleys.

Q Why can't I butt weld your reinforced polyurethane belting?

A You can, but it will be necessary to drill back the reinforcement. Follow butt welding instructions available at www.fennerdrives.com/install.

Q Do I need some take-up adjustment when using your polyurethane belts?

A When using non-reinforced polyurethane belting, take-up is not required. However, all reinforced type belting does require take-up. One good option is our T-Max Belt & Chain Tensioner® with a PowerMax™ Idler Pulley.

Q On my conveying application, the product being moved could occasionally accumulate. What belt do you recommend for this?

A Our Eagle Green 89 T with its textured surface provides a lower coefficient of friction, ideal for applications where product accumulation can occur.

Fenner Drives is a proven leader in the design and manufacture of problem-solving power transmission and motion transfer components. Recognized widely for our expertise and innovation in manufacturing technology, we consistently blend reliability, quality and value in our products. As part of our commitment to provide unsurpassed technical support and service, we maintain extensive engineering, development and testing facilities.
