Digital Fiber Sensors

Perfection Transcended!
A Wealth of Advanced Functions for Easy and Reliable Application

Innovation in the Solution Age

OMRON INDUSTRIAL AUTOMATION

Evolution and Perfection

The next-generation platform for a wide range of sensing

point 1
The industry's first Power Tuning Function in a digital sensor.

point 2
Large, Easy-to-Read Displays that are clear even from a distance.
Seven convenient display formats.

point 3
Stable long-term performance achieved with
OMRON's Auto Power Control (APC) function.

point 4
A wide array of Advanced Functions for even more applications.

point 5
The same Ease-of-Use as the E3X-DA-N Amplifier.

point 6
Environmentally
Friendly design.

point 7
Improved Mobile Console.

point 1

Smart Style!

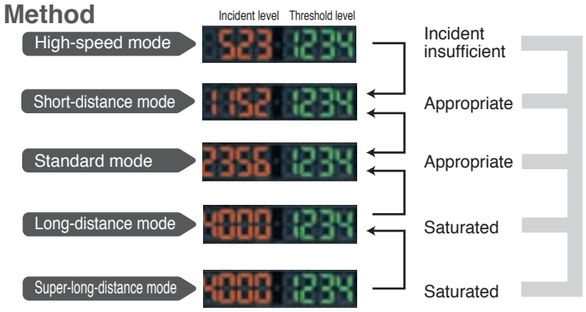
Industry's First Power Tuning Function in a Digital Sensor.

No complicated mode settings.

Patent Pending

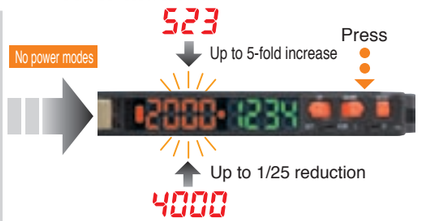
Troublesome power adjustments have been eliminated, so it isn't necessary to select from power mode settings, such as long-distance mode, standard mode, and short-distance mode. When the MODE Key is pressed once, the power tuning function shifts the power level so that the present incident level is set to the ideal level (2000 on the digital display.)

Earlier Method



The best mode for each application was selected from several power modes.

New Method



The Sensor can be used immediately without setting the mode.
If the incident light level is too high or too low, just press the Mode key to achieve the optimum status.

Insufficient light or saturation at short distances can be corrected.

The power tuning range is extended to the allowable limits to eliminate problems such as insufficient light or detection failures due to saturation.
If the installation distance is too short, the incident light may saturate (i.e., to a digital incident level of 4,000), preventing detection. The power can be tuned down to 1/25th of the default setting for stable detection even at close range.

Variations between different Sensors can be eliminated.

Threshold levels had to be set and maintained separately for individual Sensors due to variations in the digital light levels measured by each Sensor. With power tuning, the incident level can be fine-tuned so the same threshold level can be set for each Sensor in an application. Maintenance is also simplified because it is easier to recognize measurement levels that have shifted during operation.

Earlier Method

Digital light levels vary due to individual differences in the Sensors, so the threshold levels must be set individually.

New Method

All of the Amplifiers are set to the same digital light level, so the same threshold level can be set and maintained for the Sensors.

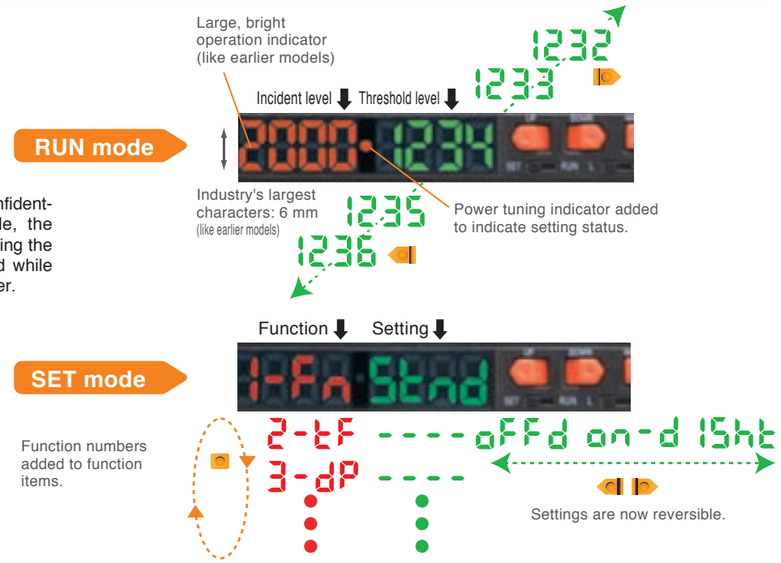
point 2

Smart Style!

Large, Easy-to-Read Displays: Clear Even from a Distance

The displays are large and easy-to-read, despite the small case.

Settings can be made more simply and confidently with two digital displays. For example, the threshold value can be changed while reading the incident level or a setting can be changed while confirming the setting's function item number.



Seven Convenient Display Formats

Patent Pending

An incident level/threshold display, percentage/threshold display, and large bar graph display have been added, so you can select the best display method for the application.

Incident Level/Threshold Display

Change the threshold level while reading the incident level.

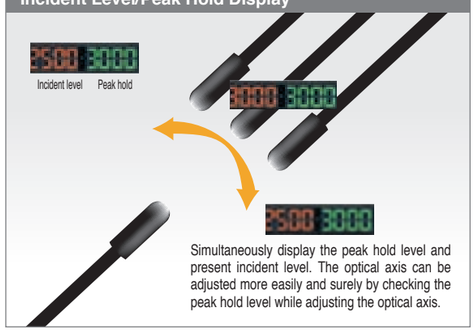
Percentage/Threshold Display

Verify the difference between the incident level and threshold level while setting the threshold level.

Large Bar Graph Display

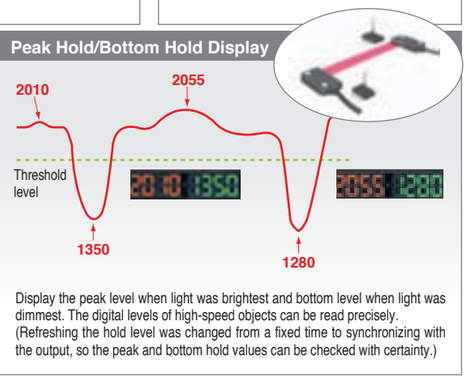
Check the incident level intuitively. Ideal when it is better to view an analog display instead of the actual digital level.

Incident Level/Peak Hold Display



Simultaneously display the peak hold level and present incident level. The optical axis can be adjusted more easily and surely by checking the peak hold level while adjusting the optical axis.

Peak Hold/Bottom Hold Display



Display the peak level when light was brightest and bottom level when light was dimmest. The digital levels of high-speed objects can be read precisely. (Refreshing the hold level was changed from a fixed time to synchronizing with the output, so the peak and bottom hold values can be checked with certainty.)

point 3

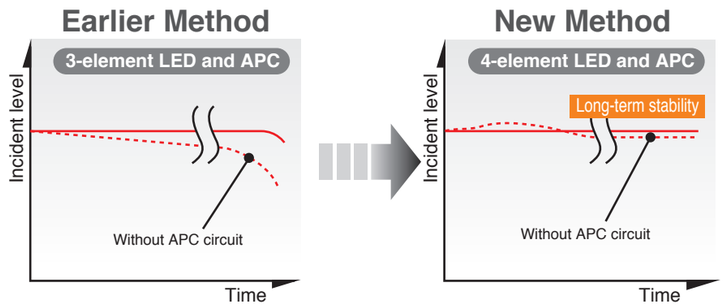
Smart Style!

Stable, Long-term Performance with OMRON's APC Function

OMRON provides the industry's most stable long-term detection by using new 4-element LEDs and an APC (Auto Power Control) circuit.

Highest Level of Stability

In addition to our unique APC circuit used in the E3X-DA-N Amplifiers to compensate for the deterioration of the LED, the E3X-DA-S uses 4-element LEDs to counteract the deterioration of the light-emitting elements over time and achieve the industry's most stable long-term detection performance.
Furthermore, the circuit is designed with excess light capacity, so the Sensors can be used with high stability regardless of whether the APC circuit is ON or OFF.



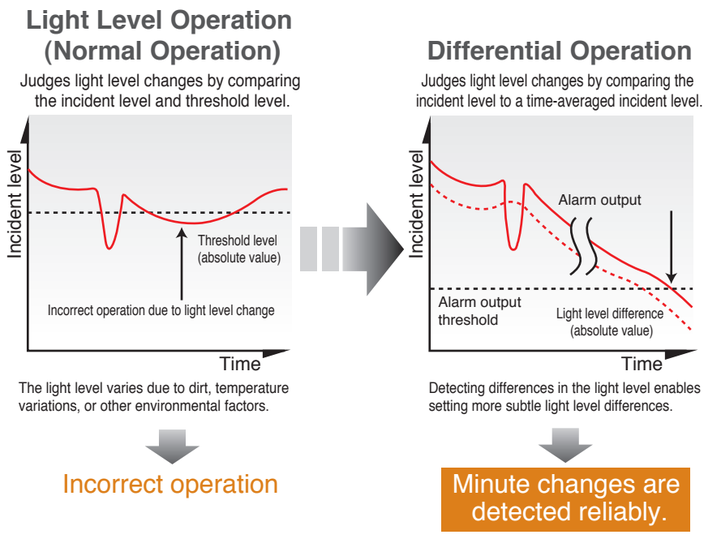
Compensate for the effects of contaminants and temperature variation with differential operation mode. (Advanced Models)

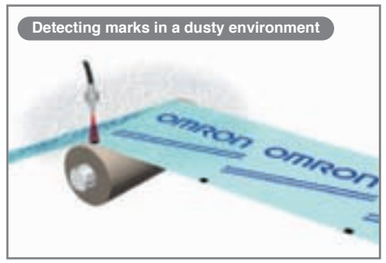
This operation mode uses a special OMRON algorithm to compensate for slight light level changes due to dirt or temperature variations and detect only the light level changes due to the workpiece.

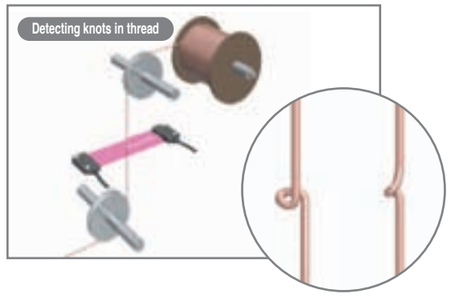
Slight light level changes can be detected with stability and precision, eliminating the need for time-consuming manual adjustments for light level changes.

With the Twin-output Amplifiers, output 2 can function as an alarm output (light level operation) to indicate when the light level has changed due to dirt or other causes.

Patent Pending







point 4

Smart Style!

Many Advanced Functions for Even More Applications

In super-high-speed mode, it is the fastest digital model at 48 μs. (Standard Models)

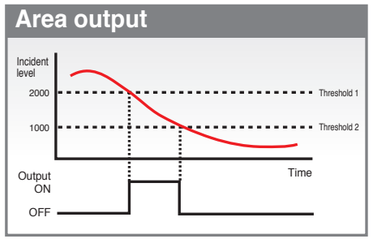
Fastest in the Industry

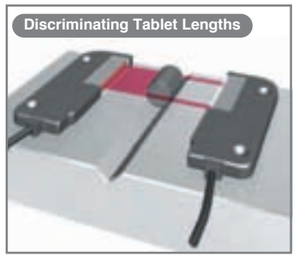
Provides high-speed response for miniature workpieces, such as chip parts and devices with short tact times.

Three kinds of timer functions are supported. The timers can be set between 1 ms and 5 s.
A one-shot timer is supported in addition to the ON-delay and OFF-delay timers.
The Amplifier's ON time can be fixed, which is useful during high-speed workpiece detection.

Area output function can be used for range judgement. (Advanced Twin-output Models)

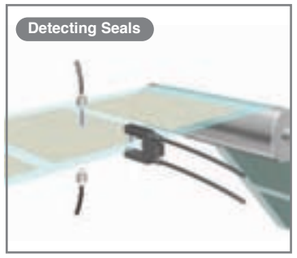
Operations that required multiple Sensors, such as height measurement, can be performed with just one Sensor. Two threshold levels can be set to easily output within-range and out-of-range outputs.





Remote input function can control the Sensor remotely. (Advanced External-input Models)

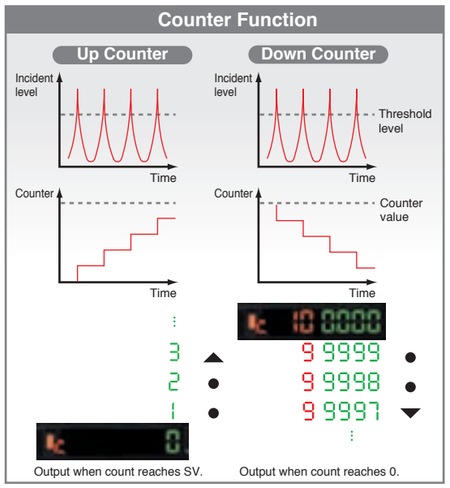
Input signals can make various remote settings, such as teaching operations, power tuning, and emitter OFF. This model is ideal for diverse needs, such as checking Sensor operation remotely before operation or making settings remotely because teaching has to be performed often for frequent workpiece model changes.

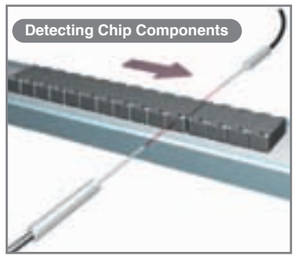


The counter function can output signal after counter counts up or down. (Advanced External-input Models)

Patent Pending

A counter function is built-in, so the number of workpieces can be counted without a separate counter or small PLC that used to be required.





The Same Ease-of-Use as the E3X-DA-N

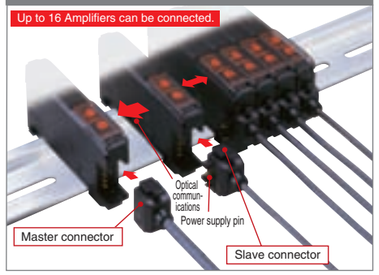
The E3X-DA-S uses OMRON's own simplified wiring connectors that were introduced with the E3X-DA-N.

Patent Pending
Japan patent number 3266198

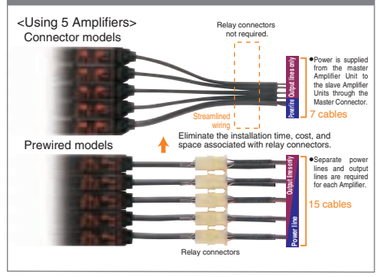
In Amplifiers with Connectors, the power supply is distributed to slave connectors through a single master connector. This design has three major advantages.

1. Wiring time is significantly reduced.
2. Relay connectors are unnecessary, so wiring takes up less space.
3. Storage and maintenance are simpler because it isn't necessary to distinguish between master connector and slave connectors on the Amplifier.

Simplified Connector Design

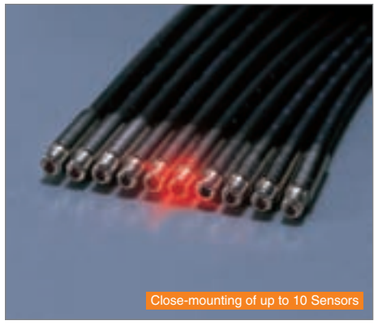


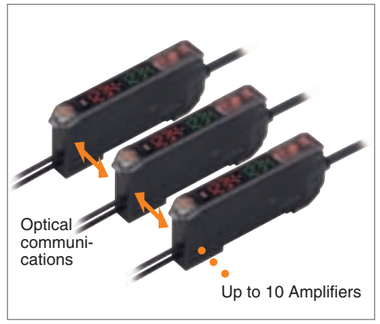
Reduced Power Wiring Saves Space



Optical communications prevents mutual interference.

Mutual interference is prevented with optical communications, so up to 10 Amplifiers can be mounted together.
(The number of Amplifiers depends on the operating conditions.)

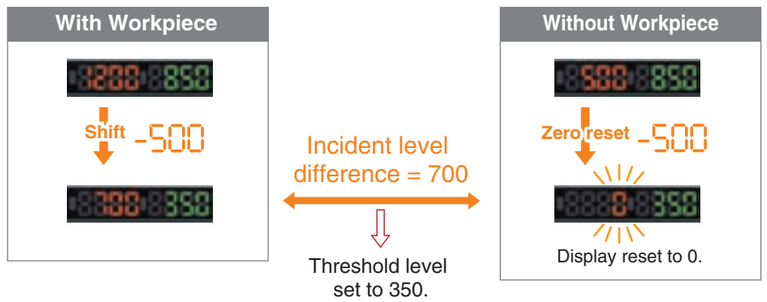




Zero reset function immediately resets the digital display to 0.

Patent Pending
Japan patent number 3255229

The zero reset function can immediately reset the digital display to 0 at any time. By setting the reference value to 0, the threshold value can be set while monitoring differences in incident light levels. The threshold value will also shift simultaneously when the zero reset button is pressed.



Reversible Digital Display (Reverse Mode)

The digital display can be reversed to match the Amplifier's mounting direction.

Environmentally Friendly Design

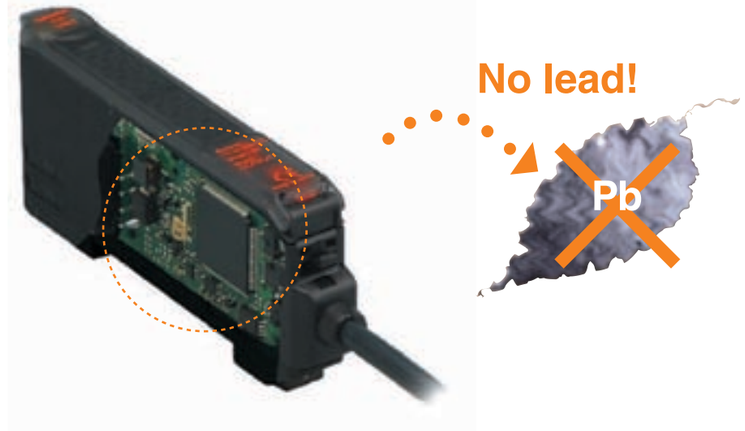
Environmentally friendly features are essential in truly high-performance products.

1 Materials containing lead have been completely eliminated.

First in the industry

The Fiber Sensor is the first in the industry to use environmentally friendly lead-free solder.

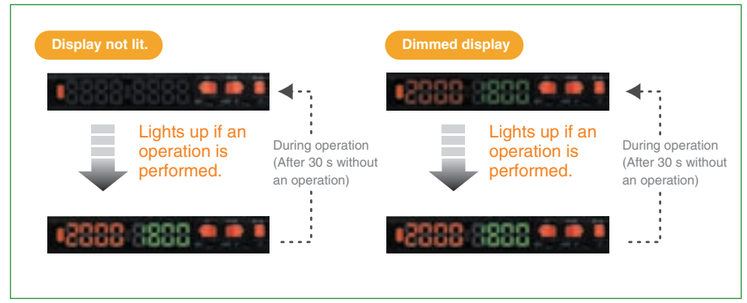
This ECO label is indicated on products that meet the environmental standards established by OMRON.



2 The digital display can be turned OFF or dimmed during operation.

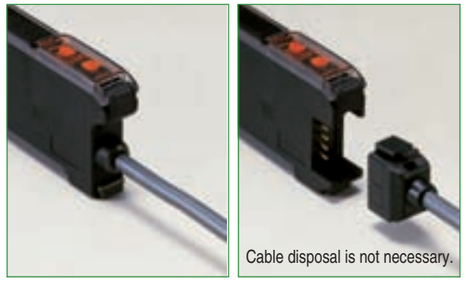
Eco-mode

When the digital display is viewed infrequently during operation, current consumption can be reduced by dimming the display or turning it OFF entirely.
The display will light up again automatically when an operation key is touched. (Eco-mode can be set from the Mobile Console only.)



3 Cable disposal is not required during maintenance.

In addition to saving space and reducing wiring time, the new connector design eliminates the need to dispose of cables together with the Amplifiers.



Further Improvements to the Mobile Console

E3X-DA-S
Digital Fiber Sensor

E3X-MC-S
Mobile Console

Can also be used with Photoelectric Sensors with Separate Digital Amplifiers.

E3C-LDA
Photoelectric Sensor with Separate Digital Amplifier

Group Power Tuning

Easily set multiple Sensors.

With the group power tuning function, power tuning is possible for multiple Sensors at the same time.

Improved Mode Lock Function

The Age of User-customizable Sensors.

Settings can be customized for different applications by locking out unnecessary function blocks within function settings.

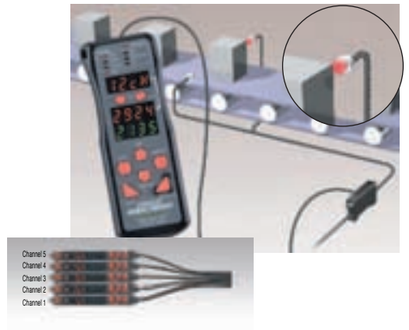
Application		Function Block		
		Manual setting	Teaching	Function setting
Manual	Set for manual operation.	Operation OK	Locked	Locked
Teaching	Set for teaching operation.	Locked	Operation OK	Locked
Teaching + Manual	Set for teaching + manual operation.	Operation OK	Operation OK	Locked

Retains all of the Previous Advantages of the Mobile Console.

New and Improved Fiber Sensor and Mobile Console.

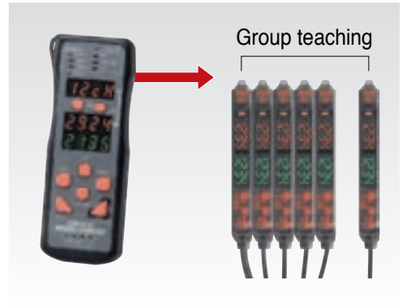
Settings, teaching, and fine-tuning can be performed at the fiber tip.

The Mobile Console can be used for settings and teaching at the tip of the fiber. Difficult adjustments can be made while checking the workpiece position.
Even if the Amplifier and Sensor head are separated during operation, it is still possible to flash the Sensor head and display the amplifier channels.



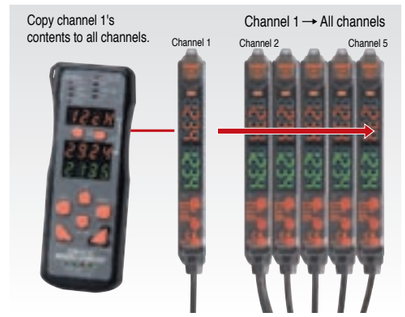
With Group Teaching, Teach Multiple Amplifiers Simultaneously.

The tedious teaching that had to be performed separately for each Amplifier can now be performed for several Amplifiers at once using the Mobile Console.



Copying Settings within the Same Group

Settings such as mode or threshold settings in an Amplifier or bank can be copied to all of the Amplifiers in the same group.



Copying Settings to Other Groups

The settings for a group of Amplifiers on one machine can be copied to a group of Amplifiers on another machine.
(The settings can also be copied to and from banks.)

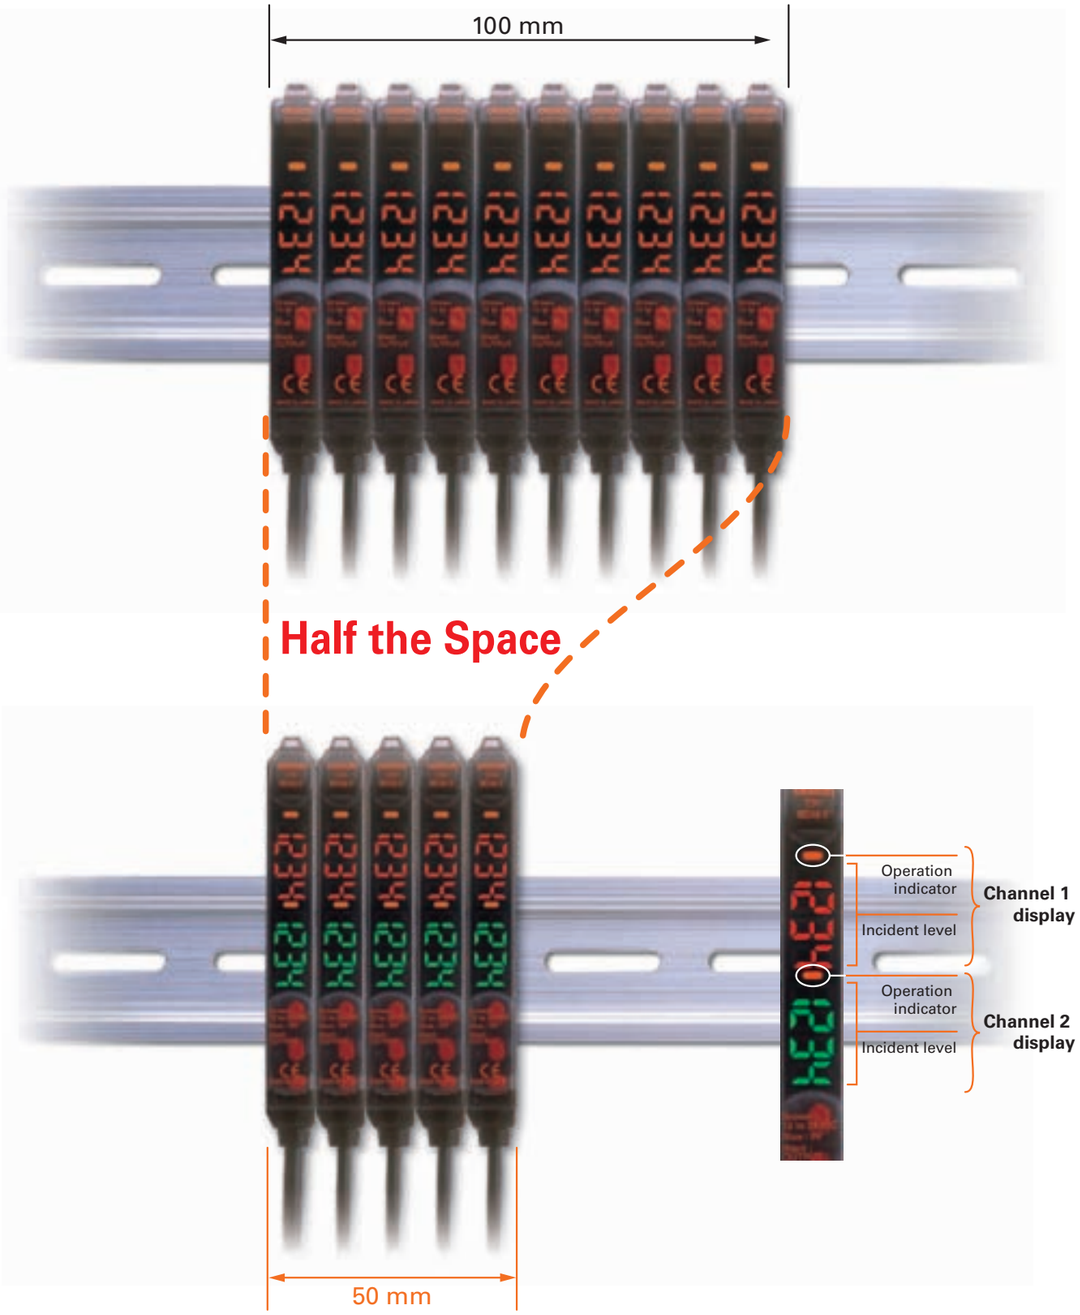
Having problems gang-mounting Fiber Sensor Amplifier Units in tight spaces?



Smart Style!

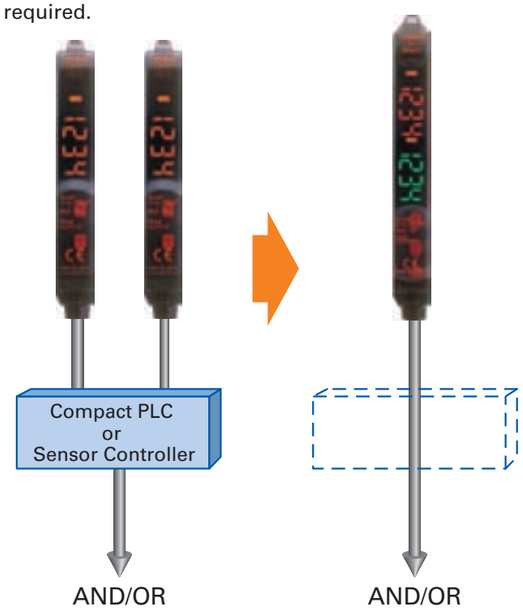
Slimmest in the industry — 5 mm per channel. Patent pending

Two Amplifiers squeezed into a body of width 10 mm.
Remarkable space saving of approx. 50%.
Power saving of approx. 40%.
(Savings per channel compared with existing products.)

Checking alignment and mounting of LCD substrates

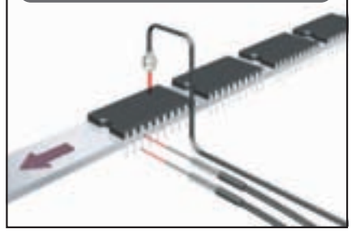
Equipped with AND/OR control output. Patent pending

Two types of control output possible with one Sensor (AND/OR).
Compact PLCs and Sensor Controllers no longer required.



Detection and front/back discrimination of parts

Detection of bends in electronic component leads



Flexible control with Mobile Console.

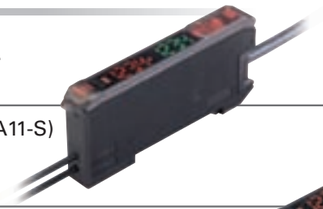
The Mobile Console, which can also be used with the E3X-DA-S, allows handheld operation of the Fiber Head even when it is separated from the Amplifier.

An impressive lineup of Digital Amplifiers to handle a wide variety of applications.

The Digital Amplifiers achieve a maximum response time of 48 μs.

Standard Models

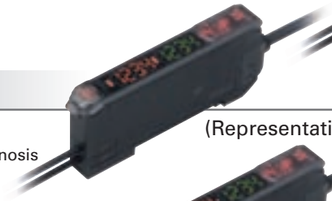
Models with Cables (E3X-DA11-S)



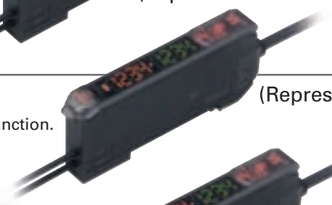
Models with Connectors (E3X-DA6-S)
Equipped with OMRON's own easy-wiring connector.

Advanced Models

Twin-output Models (Representative model: E3X-DA6TW-S)
Two threshold values can be set. Judgement and self-diagnosis output available.



External-input Models (Representative model: E3X-DA6RM-S)
The Sensor can be controlled externally. Equipped with counting function.



A wide variety of color variations available. Equipped with APC circuit for more stable detection.

Mark-detecting Models and Infrared Models

Models with Green LED (Representative model: E3X-DAG6-S)

Models with Blue LED (Representative model:E3X-DAB6-S)

Infrared Models Available Soon (Representative model:E3X-DAH6-S)

NEW Two Amplifiers squeezed into a single, compact Unit. AND/OR output available.

2-channel Models

(Representative model:E3X-MDA6)

Maximize Fiber Amplifier potential using remote setting, copying, and other functionality.

Mobile Console

(E3X-MC11-S)

A host of remarkable functions inside a compact body. A complete lineup of Sensor Heads to handle an even wider range of applications. This is the platform for OMRON's sensing technology.

Linear Platform

High-resolution sensing using laser and magnetic technology

Smart Monitor

Laser-type Smart Sensors ZX-L Series

An improved lineup for smarter sensing

Inductive Displacement Smart Sensors ZX-E Series

A lineup of Smart Sensors that use the eddy current method

ON/OFF Platform

A common platform for Fiber Sensors and Sensors with Separate Amplifiers

Mobile Console

Digital Fiber Sensors E3X-DA-S/MDA Series

Refinement and a new dimension that goes beyond superior performance.

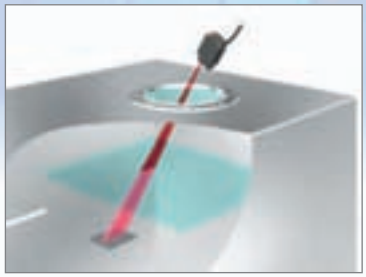
Laser-type Photoelectric Sensors with Separate Amplifiers E3C-LDA Series

Photoelectric Sensors with Separate Digital Amplifiers have joined the Smart Sensor family.

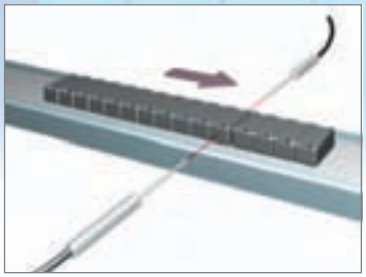
New Models That Counteract the Decline in Operating Rates Caused by Dust and Dirt

Advanced ATC Models

- **Active Threshold Control (ATC)**
  Automatically adjusts the threshold value.
- **ATC Error Output (Selectable Function)**
  Provides an error output when ATC does not adjust the threshold value.
- **Alarm Output (Selectable Function)**
  Provides an alarm when maintenance is required.



Glass substrate detection though view ports



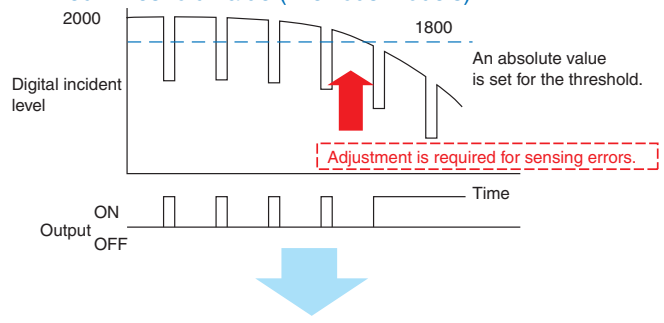
Chip component detection

Technology

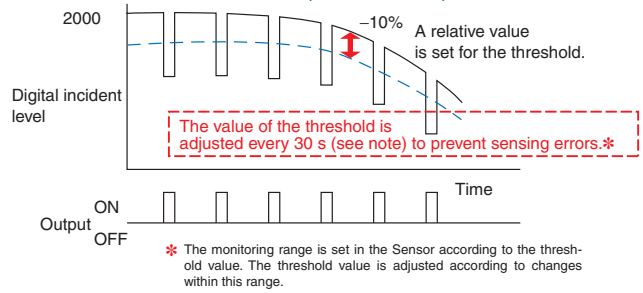
Intelligently Solve Problems Onsite with ATC Function

A unique OMRON algorithm has been used that can determine whether changes have been caused by dust and dirt or by differences in workpieces.
The threshold value is automatically adjusted by the Sensor according to changes to increase equipment operating rates by reducing sensing errors. This is particularly true in applications requiring high-precision detection.

Fixed Threshold Value (Previous Models)



Active Threshold Control (ATC Models)



* The monitoring range is set in the Sensor according to the threshold value. The threshold value is adjusted according to changes within this range.

The *DINC* Engine for High-performance Sensing

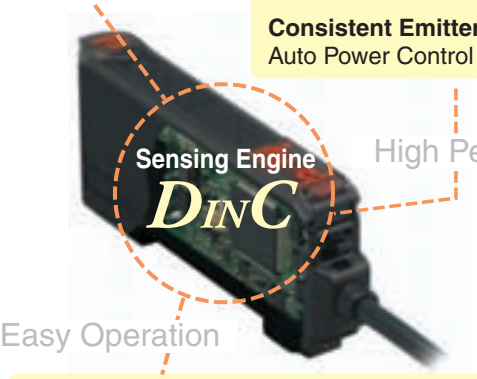
OMRON's many years of accumulated sensing technology and high-speed digital processing techniques merge to meet onsite needs. Our goal is high-performance sensing that provides easy, reliable application.

Reliable Detection of Small Workpieces
12-bit A/D converter (4,000 resolution), high-speed response of 48 μs (Fiber Sensors)

Fine Sensing

Automatic Compensation for External Changes
Active Threshold Control (ATC)

Consistent Emitter Power
Auto Power Control (APC)



High Performance

Easy Operation

New Models That Eliminate Worries about Digital Sensor Setting Mistakes

Limited-function Models: Simple and Easy

Easy and Reliable Digital Sensors with the Same Detection Performance as Previous Models

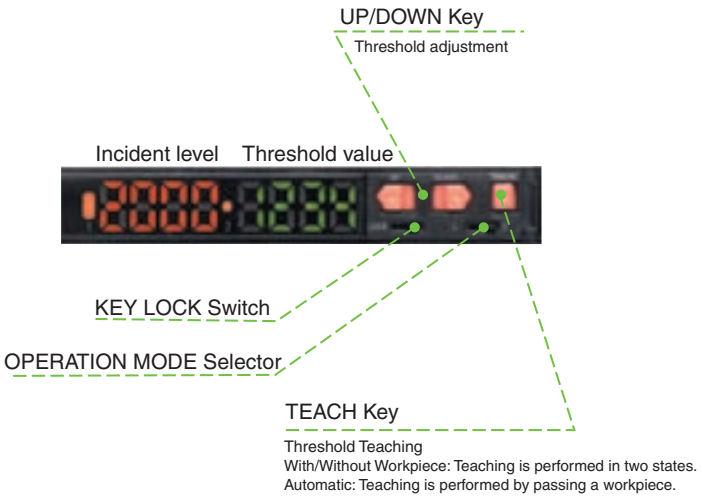
Digital Fiber Sensors
E3X-DA□SE-S

- One-key, one-operation concept for easy operation.
- Threshold value setting with direct operation performed while monitoring the detection status.
- Lock function to prevent operating errors through unintentional operation.

Technology

The Simplest Digital Fiber Sensor

Some people think that digital sensors with their advanced performance are difficult to use, so we went back to the drawing board to rethink performance and functions.
Without changing basic functions like APC and digital displays, OMRON created a Digital Fiber Sensor that can be used as easily as the familiar sensors with sensitivity adjustment knobs.



The *DINC* Engine for High-performance Sensing

OMRON's many years of accumulated sensing technology and high-speed digital processing techniques merge to meet onsite needs.
Our goal is high-performance sensing that provides easy, reliable application.

Digital Fiber Sensors

E3X-DA-S/MDA

CSM_E3X-DA-S_MDA_DS_E_3_1

OMRON's Next-generation Platform for a Wide Range of Detection

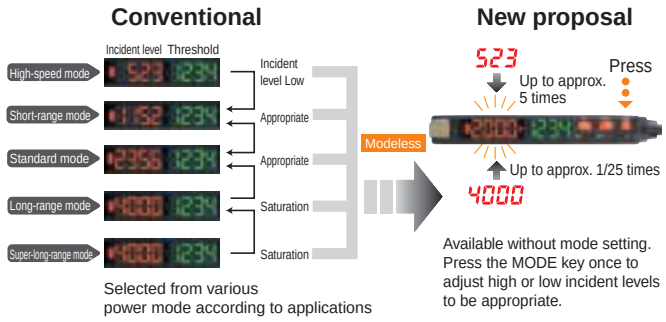
- Features a Power Tuning function that optimizes light reception at the press of a button.
- Combines newly developed 4-element LEDs with an APC circuit to ensure stable, long-term LED performance.
- Utilizes OMRON's innovative wire-saving connector.
- 2-channel models achieve the thinnest profile in the industry, at only 5 mm per channel.
- 2-channel models also offer AND/OR control output.

⚠ Be sure to read *Safety Precautions* on page 15.

Features

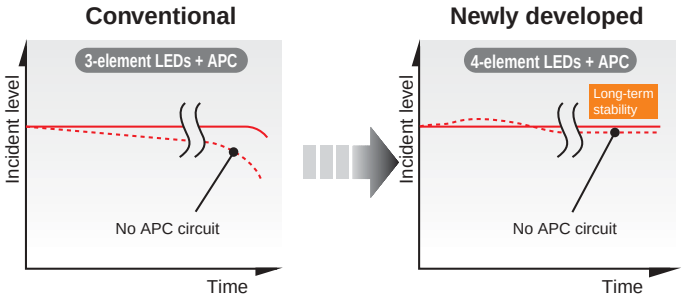
Equipped with an Industry's First Power Tuning (Optimum Light Setting) Function

The E3X-DA-S/MDA features a Power Tuning function that optimizes power at the press of a button.
This function easily but securely resolves saturation due to short sensing distances or insufficient incident light due to long sensing distances.
In addition, the response speed does not change as mode selection has tuned the power.



Adoption of Newly Developed 4-Element LEDs and an APC (Auto Power Control) Circuit Achieves Long-term Reliable Detection at the Highest Level in the Industry

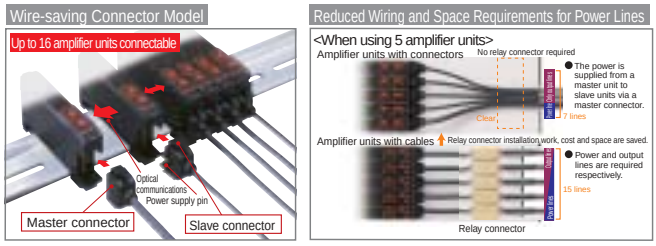
The long-term reliable detection at the highest level in the industry is achieved with the innovative APC circuit whose performance is proved by E3X-DA-N series and the newly developed high-power LEDs (4-element type) to ensure super stable, long-term LED performance.
Stable performance is always available without the ON/OFF setting of an APC circuit.



OMRON's Innovative Wire-saving Connector Inherited from the E3X-DA-N

The amplifier units with connectors supply the power to slave connectors via a master connector. This offers three following advantages.

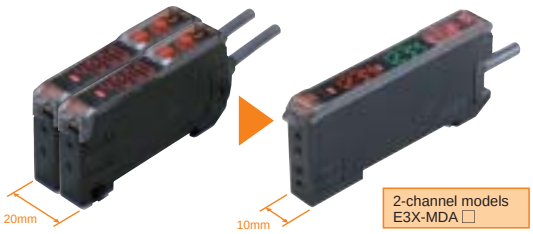
1. Greatly reduced wiring work
2. Improved space usability due to the unnecessity of relay connectors
3. Simple stock management due to the unnecessity of distinction between master and slave for amplifiers



Models available for a wide variety of applications at manufacturing sites

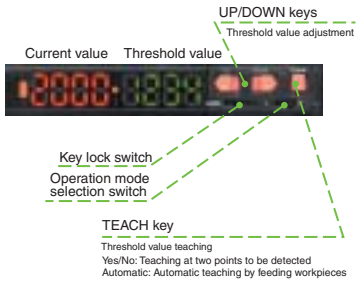
Industry Leading Two Amplifiers Loaded in a Small Body ···· 2-channel models

Two amplifiers are loaded in a 10 mm-wide body.
Space usability can be approximately doubled.
In addition, approximately 40% of the energy can be saved.
(compared to the value per channel of the former model)



Simpler Digital Fiber Sensors ···· Simple & Easy Single-function Models

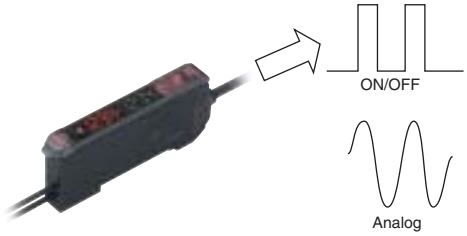
Required performance and functions have been reviewed from basic points to improve high-performance but hard-to-use digital models. Digital fiber sensors, used in the sense as if using volume type sensors, are added to the basic functions such as an APC function and digital display.



High-speed and High-resolution Analog Output Supports Wide Variety of Applications ····Advanced Analog Output Models

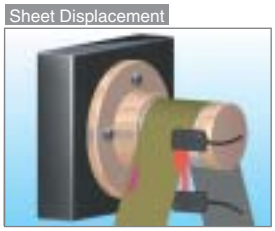
Analog Control Output

The voltage in the range of 1 to 5 V is output according to the incident level (digital display). Wide variety of applications is possible including positioning control or difference detection with multiple levels.



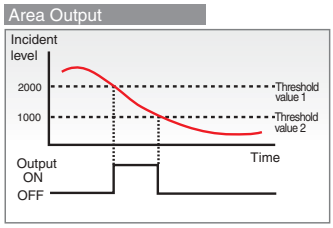
High-speed and High Resolution

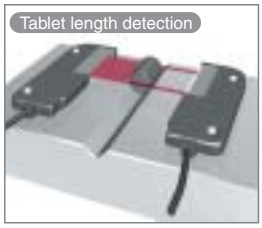
Detection modes can be switched in accordance with applications. High-speed response of 80 μs (super-high-speed mode) supports the positioning controls that require high-speed control.



Area Output Function Area Judgment Is Possible ····Advanced, Twin-output Models

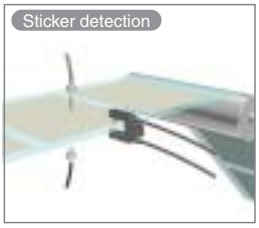
Only one sensor is enough for area judgment for height or others that has required multiple sensors.
Setting two threshold values allows easy output inside and outside range.





Remote Input Function Sensors Controlled from Outside ····Advanced, External-input Models

Remote settings for teaching/power tuning/light OFF are possible with input signals.
The remote input function meets the diversifying demands such as remote settings made for frequent teaching due to level change corresponding to workpiece change or remote operation check of sensors before operation.



Equipped with an Industry's First ATC Function that Resolves Problems at Manufacturing Sites ····Advanced ATC Models

OMRON's unique algorithm is equipped to distinguish dust or dirt and the change of workpieces. Automatic correction of threshold values by sensors in accordance with changes prevents malfunctions and improves the operating rates of machines. The ATC function is especially effective for the applications that require high-resolution detection.

Amplifier Unit Connectors (Order Separately)

Note: Protector seals are provided as accessories. [Refer to *Dimensions* on page 19.]

Item	Appearance	Cable length	No. of conductors	Model
Master Connector		2 m	3	**E3X-CN11**
			4	**E3X-CN21**
Slave Connector			1	**E3X-CN12**
			2	**E3X-CN22**

Combining Amplifier Units and Connectors

Amplifier Units and Connectors are sold separately. Refer to the following tables when placing an order.

Amplifier Unit				Applicable Connector (Order Separately)	
Model	NPN output	PNP output		Master Connector	Slave Connector
Single-function models	E3X-DA6SE-S	E3X-DA8SE-S	+	E3X-CN11	E3X-CN12
Standard models	E3X-DA6-S	E3X-DA8-S			
Mark-detecting models (multiple color light sources)	E3X-DAG6-S	E3X-DAG8-S			
	E3X-DAB6-S	E3X-DAB8-S			
	E3X-DAH6-S	E3X-DAH8-S			
Advanced models	E3X-DA6TW-S	E3X-DA8TW-S		E3X-CN21	E3X-CN22
	E3X-DA6RM-S	E3X-DA8RM-S			
	E3X-DA6AT-S	E3X-DA8AT-S			
2-channel models	E3X-MDA6	E3X-MDA8			

When Using 5 Amplifier Units

Amplifier Units (5 Units)	+	1 Master Connector + 4 Slave Connectors

Mobile Console (Order Separately) [Refer to *Dimensions* on page 20.]

Appearance	Model	Remarks
	**E3X-MC11-SV2** (model number of set)	Mobile Console with Head, Cable, and AC adapter provided as accessories
	**E3X-MC11-C1-SV2**	Mobile Console
	**E3X-MC11-H1**	Head
	**E39-Z12-1**	Cable (1.5 m)

Note: Use the E3X-MC11-SV2 Mobile Console for the E3X-DA-S/MDA-series Amplifier Units.
The E3X-MC11-SV2 is an upgraded version of the E3X-MC11-S that is fully interchangeable with the older model.

Accessories (Order Separately)

Mounting Bracket [Refer to *E39-L/F39-L/E39-S/E39-R.*]

Appearance	Model	Quantity
	**E39-L143**	1

End Plate [Refer to *PFP-□.*]

Appearance	Model	Quantity
	**PFP-M**	1

Ratings and Specifications

Refer to pages 17 to 20 for dimensions.

Amplifier Units

Item \ Type		Single-function models	Standard models	Mark-detecting models (multiple color light sources)		
				Green LED	Blue LED	Infrared LED
Item	Model	E3X-DA□SE-S	E3X-DA□-S	E3X-DAG□-S	E3X-DAB□-S	E3X-DAH□-S
Light source (wavelength)		Red LED (635 nm)		Green LED (525 nm)	Blue LED (470 nm)	Infrared LED (870nm)
Power supply voltage		12 to 24 VDC ±10%, ripple (p-p) 10% max.				
Power consumption		960 mW max. (current consumption: 40 mA max. at power supply voltage of 24 VDC)				
Control output		Load power supply voltage: 26.4 VDC; NPN/PNP open collector; load current: 50 mA max.; residual voltage: 1 V max.				
Protection circuits		Reverse polarity for power supply connection, output short-circuit				
Response time	Super-high-speed mode	---	Operate: 48 μs, reset: 50 μs *1, *2			
	High-speed mode	---	Operate/reset: 250 μs			
	Standard mode	Operate or reset: 1 ms				
	High-resolution mode	---	Operate or reset: 4 ms			
Sensitivity setting		Teaching or manual method				
Functions	Power tuning	---	Light emission power and reception gain, digital control method			
	Timer function	---	Select from OFF-delay, ON-delay, or one-shot timer. 1 ms to 5 s (1 to 20 ms set in 1-ms increments, 20 to 200 ms set in 10-ms increments, 200 ms to 1 s set in 100-ms increments, and 1 to 5 s set in 1 s-increments)			
	Automatic power control (APC)	High-speed control method for emission current				
	Zero-reset	---	Negative values can be displayed. (Threshold value is shifted.)			
	Initial reset	Settings can be returned to defaults as required.				
	Mutual interference prevention	Possible for up to 10 Units *3				
Display		Operation indicator (orange)	Operation indicator (orange), Power Tuning indicator (orange)			
Digital display		incident level + threshold	Select from incident level + threshold or other 6 patterns			
Display orientation		---	Switching between normal/reversed display is possible.			
Ambient illumination (Receiver side)		Incandescent lamp: 10,000 lux max. Sunlight: 20,000 lux max.				
Ambient temperature range		Operating: Groups of 1 to 2 Amplifiers: −25°C to 55°C Groups of 3 to 10 Amplifiers: −25°C to 50°C Groups of 11 to 16 Amplifiers: −25°C to 45°C Storage: −30°C to 70°C (with no icing or condensation)				
Ambient humidity range		Operating and storage: 35% to 85% (with no condensation)				
Insulation resistance		20 MΩ min. (at 500 VDC)				
Dielectric strength		1,000 VAC at 50/60 Hz for 1 minute				
Vibration resistance		Destruction: 10 to 55 Hz with a 1.5-mm double amplitude for 2 hrs each in X, Y and Z directions				
Shock resistance		Destruction: 500 m/s^2, for 3 times each in X, Y and Z directions				
Degree of protection		IEC 60529 IP50 (with Protective Cover attached)				
Connection method		Pre-wired or amplifier unit connector				
Weight (packed state)		Pre-wired model: Approx. 100 g, Amplifier unit connector model: Approx. 55 g				
Materials	Case	Polybutylene terephthalate (PBT)				
	Cover	Polycarbonate (PC)				
Accessories		Instruction manual				

*1. Communications are disabled if the detection mode is selected during super-high-speed mode, and the communications functions for mutual interference prevention and the Mobile Console will not function.
*2. PNP output is as follows: Operate: 53 μs, reset: 55 μs.
*3. Mutual interference prevention can be used for only up to 6 Units if power tuning is enabled.

Item \ Type		Advanced models				2-channel models
		External input models	Twin output models	ATC function models	Analog output models	
	Model	E3X-DA□RM-S	E3X-DA□TW-S	E3X-DA□AT-S	E3X-DA□AN-S	E3X-MDA□
Light source (wavelength)		Red LED (635 nm)				
Power supply voltage		12 to 24 VDC ±10%, ripple (p-p) 10% max.				
Power consumption		1,080 mW max. (current consumption: 45 mA max. at power supply voltage of 24 VDC)				
Control output	ON/OFF output	Load power supply voltage: 26.4 VDC; NPN/PNP open collector; load current: 50 mA max.; residual voltage: 1 V max.				
	Analog output	---			**Control output** Voltage output: 1 to 5 VDC (Connection load 10 kΩ min.) **Temperature characteristics** 0.3%F.S./°C **Response speed/repeat accuracy** Super-high-speed mode: 80 μs/1.5%F.S. High-speed mode: 250 μs/1.5%F.S. Standard mode: 1 ms/1%F.S. High-resolution mode: 4 ms/0.75%F.S.	---
Remote control input		No-voltage input (contact/non-contact) *1				
Protection circuits		Reverse polarity for power supply connection, output short-circuit				
Response time	Super-high-speed mode	Operate: 48 μs, reset: 50 μs *2, *3, *4	Operate or reset: 80 μs *2	Operate or reset: 130 μs *2	Operate or reset: 80 μs *2	Operate or reset: 130 μs *2, *5
	High-speed mode	Operate or reset: 250 μs				Operate or reset: 450 μs
	Standard mode	Operate or reset: 1ms				
	High-resolution mode	Operate or reset: 4ms				
Sensitivity setting		Teaching or manual method				
Functions	Power tuning	Light emission power and reception gain, digital control method				
	Differential detection	Switchable between single edge and double edge detection mode Single edge: Can be set to 250 μs, 500 μs, 1 ms, 10 ms, or 100 ms. Double edge: Can be set to 500 μs, 1 ms, 2 ms, 20 ms, or 200 ms.			---	
	Timer function	Select from OFF-delay, ON-delay, or one-shot timer. 1 ms to 5 s (1 to 20 ms set in 1-ms increments, 20 to 200 ms set in 10-ms increments, 200 ms to 1 s set in 100-ms increments, and 1 to 5 s set in 1 s-increments)				
	Automatic power control (APC)	High-speed control method for emission current				
	Zero-reset	Negative values can be displayed. (Threshold value is shifted.)				
	Initial reset	Settings can be returned to defaults as required.				
	Mutual interference prevention	Possible for up to 10 Units *6				Possible for up to 9 Units (18 channels) *7
	Counter	Switchable between up counter and down counter. Set count: 0 to 9,999,999	---			

*1. Input Specifications

	Contact input (relay or switch)	Non-contact input (transistor)
NPN	ON: Shorted to 0 V (sourcing current: 1 mA max.). OFF: Open or shorted to Vcc.	ON: 1.5 V max. (sourcing current: 1 mA max.) OFF: Vcc - 1.5 V to Vcc (leakage current: 0.1 mA max.)
PNP	ON: Shorted to Vcc (sinking current: 3 mA max.). OFF: Open or shorted to 0 V.	ON: Vcc - 1.5 V to Vcc (sinking current: 3 mA max.) OFF: 1.5 V max. (leakage current: 0.1 mA max.)

*2. Communications are disabled if the detection mode is selected during super-high-speed mode, and the communications functions for mutual interference prevention and the Mobile Console will not function.
*3. PNP output is as follows: Operate: 53 μs, reset: 55 μs.
*4. When counter is enabled: 80 μs for operate and reset respectively.
*5. When differential output is selected for the output setting, the second channel output is 200 μs for operation and reset respectively.
*6. Mutual interference prevention can be used for only up to 6 Units if power tuning is enabled.
*7. Mutual interference prevention can be used for up to 5 Units (10 channels) if power tuning is enabled.

Amplifier Unit Connectors

Item	Model	E3X-CN11/21/22	E3X-CN12
Rated current		2.5 A	
Rated voltage		50 V	
Contact resistance		20 mΩ max. (20 mVDC max., 100 mA max.) (The figure is for connection to the Amplifier Unit and the adjacent Connector. It does not include the conductor resistance of the cable.)	
No. of insertions		Destruction: 50 times (The figure for the number of insertions is for connection to the Amplifier Unit and the adjacent Connector.)	
Materials	Housing	Polybutylene terephthalate (PBT)	
	Contacts	Phosphor bronze/gold-plated nickel	
Weight (packed state)		Approx. 55 g	Approx. 25 g

Mobile Console

Item	Model	E3X-MC11-SV2
Applicable Sensors		E3X-DA-S E3X-MDA E3C-LDA E2C-EDA
Power supply voltage		Charged with AC adapter
Connection method		Connected via adapter
Weight (packed state)		Approx. 580 g (Console only: 120 g)

Refer to *Instruction Manual* provided with the Mobile Console for details.

Safety Precautions

Refer to *Warranty and Limitations of Liability*.

⚠ WARNING

This product is not designed or rated for ensuring safety of persons either directly or indirectly. Do not use it for such purposes.

Precautions for Correct Use

Do not use the product in atmospheres or environments that exceed product ratings.

Amplifier Unit

● Designing

Operation after Turning Power ON

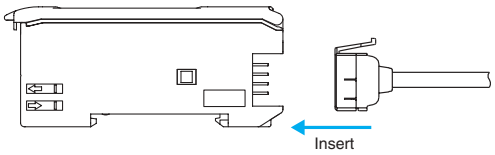
The Sensor is ready to detect within 200 ms after the power supply is turned ON. If the Sensor and load are connected to separate power supplies, be sure to turn ON the Sensor first.

● Mounting

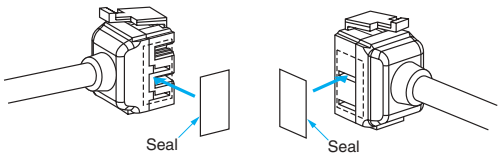
Connecting and Disconnecting Connectors

Mounting Connectors

1. Insert the Master or Slave Connector into the Amplifier Unit until it clicks into place.



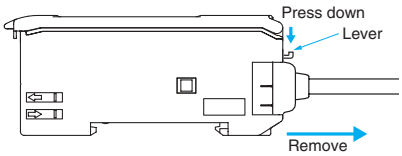
2. Attach the protector seals (provided as accessories) to the sides of master and slave connectors that are not connected.



Note: Attach the seals to the sides with grooves.

Removing Connectors

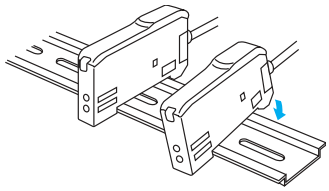
1. Slide the slave Amplifier Unit(s) for which the Connector is to be removed away from the rest of the group.
2. After the Amplifier Unit(s) has been separated, press down on the lever on the Connector and remove it. (Do not attempt to remove Connectors without separating them from other Amplifier Units first.)



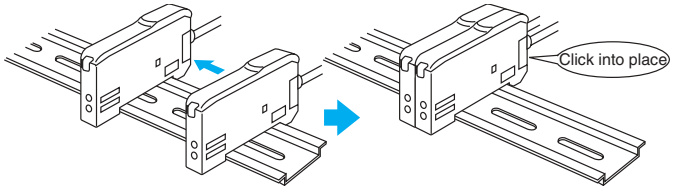
Adding and Removing Amplifier Units

Adding Amplifier Units

1. Mount the Amplifier Units one at a time onto the DIN track.



2. Slide the Amplifier Units together, line up the clips, and press the Amplifier Units together until they click into place.



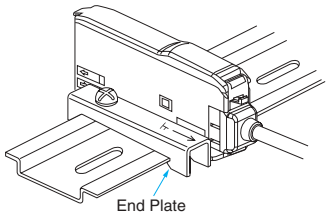
Removing Amplifier Units

Slide Amplifier Units away from each other, and remove from the DIN track one at a time. (Do not attempt to remove Amplifier Units from the DIN track without separating them first.)

Note: 1. The specifications for ambient temperature will vary according to the number of Amplifier Units used together. For details, refer to *Ratings and Specifications*.
2. Always turn OFF the power supply before joining or separating Amplifier Units.

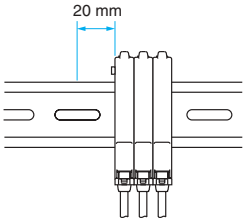
Mounting the End Plate (PFP-M)

An End Plate should be used if there is a possibility of the Amplifier Unit moving, e.g., due to vibration. If a Mobile Console is going to be mounted, connect the End Plate in the direction shown in the following diagram.



Mounting the Mobile Console Head

Leave a gap of at least 20 mm between the nearest Amplifier Unit and the Mobile Console head.

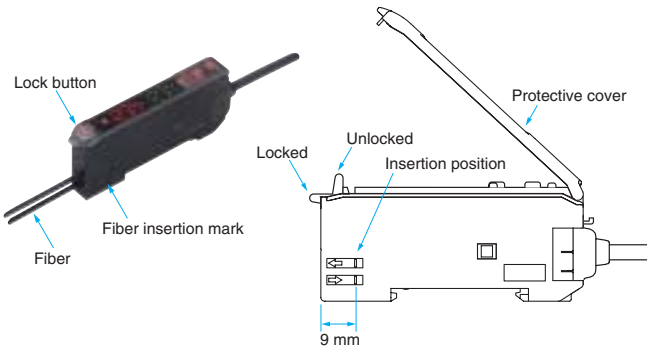


Fiber Connection

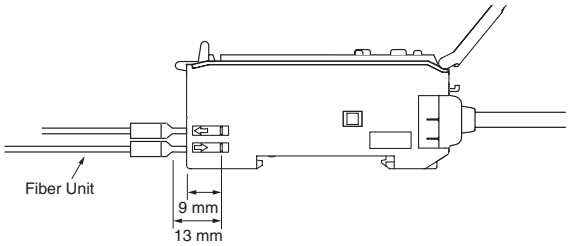
The E3X Amplifier Unit has a lock button for easy connection of the Fiber Unit. Connect or disconnect the fibers using the following procedures:

1. Connection

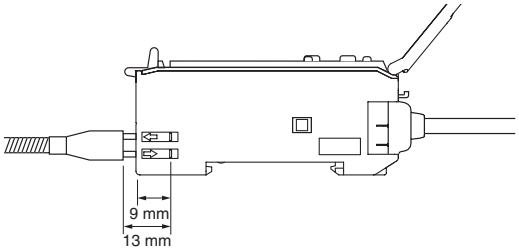
Open the protective cover, insert the fibers according to the fiber insertion marks on the side of the Amplifier Unit, and lower the lock lever.



Fibers with E39-F9 Attachment

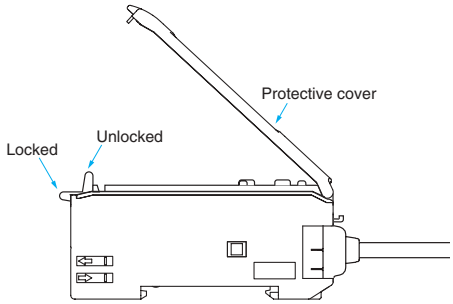


Fibers That Cannot Be Free-Cut (with Sleeves)



2. Disconnecting Fibers

Remove the protective cover and raise the lock lever to pull out the fibers.



Note: 1. To maintain the fiber properties, confirm that the lock is released before removing the fibers.
2. Be sure to lock or unlock the lock button within an ambient temperature range between –10°C and 40°C.

● Adjusting

Mutual Interference Protection Function

There may be some instability in the digital display values due to light from other sensors. If this occurs, decrease the sensitivity (i.e., decrease the power or increase the threshold) to perform stable detection.

EEPROM Writing Error

If the data is not written to the EEPROM correctly due to a power failure or static-electric noise, initialize the settings with the keys on the Amplifier Unit. ERR/EEP will flash on the display when a writing error has occurred.

Optical Communications

Several Amplifier Units can be slid together and used in groups. Do not, however, slide the Amplifier Units or attempt to remove any of the Amplifier Units during operation.

● Others

Protective Cover

Always keep the protective cover in place when using the Amplifier Unit.

Mobile Console

Use the E3X-MC11-SV2 Mobile Console for the E3X-DA-S-series Amplifier Units.
