

UM30-2 Ultrasonic Sensors

Detection with many advantages and now with EasyTouch

UM30-2 ultrasonic sensors – flexible to use, even easier to operate with EasyTouch

No matter how dusty: The ultrasonic proximity sensors remain largely unaffected by foreign matter in the air, fog, vapour and dirt. Even the background suppression is perfect. That's what you call focussing on the essentials.

UM30-2

Proven sensor technology with innovative “EasyTouch” control panel

Even easier to operate – all adjustments are made using 2 keys and the three-digit LED display. Even better feedback – tri-colour LEDs for optimum display of all operating conditions. Even faster adjustment – Teach-in or numeric adjustment via LED display.

Short, medium or long range? The UM30-2 is available with five scanning distances: For short ranges, the minimum scanning distance starts at 30 mm and for long range applications, the operating distance extends to 6000 mm.

UM30-2 units are equipped with a binary switching output and an analogue output. Depending on the task, objects can be easily detected and the distance measured.

Ultrasonic sensors from SICK accurately detect objects and distances. The sound has its own world – with ultrasonic sensors offering clear advantages in many industrial sensor applications.

- High measuring accuracy using time-of-flight measurement
- Colour-independent (even glass and clear film are detected)
- Display for quick and flexible sensor adjustment
- Insensitive to dust, dirt and fog
- Also with combined analogue and digital output
- Operating scanning range up to 6000 mm
