1. Product Introduction

1.1. Overview

Innodisk Industrial SLC SD Card is a slim and low power consumed storage module that designed especially for portable devices. Innodisk Industrial SLC SD Card is compatible with SD 2.0/1.1/1.01 standard and supports SDHC Class 10 that provides excellent performance. The built-in auto ECC function can also detect and correct errors during data transfer. Moreover, Innodisk Industrial SLC SD Card supports standby and sleep mode that reduces power consumption in advance for application with limited power source.

1.2. Product Picture

Figure 1: Industrial SD Card picture

1.3. Product Features

- Interface: 9 pins SD standard interface
- SLC NAND Flash
- Capacity
 - SD: 128MB, 256MB, 512MB, 1GB, 2GB
 - SDHC: 4GB, 8GB, 16GB, 32GB
 - Data transfer rate (Max.): Read: 20MB/sec, Write: 16MB/sec
- Built-in ECC corrects up to 24 bits per 1 KB
- Durability
 - Insertion/removal: 10,000 cycles
 - Write protect switch: 1,000 cycles

- Dimension: 24.00 x 32.00 x 2.10 mm
- Enhanced Power Cycling: Pass 1,000 times copy and compare test under Non-Safe Mode/Safe Mode.
- · Golden finger 30u".

2. Theory of operation

2.1. Overview

Figure 2 shows the operation of Innodisk Industrial SD Card from the system level, including the major hardware blocks.

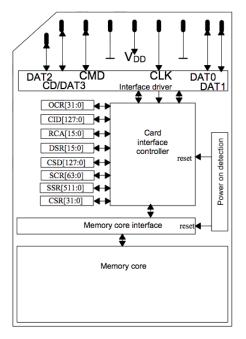

Figure 2: Innodisk Industrial SD Card Architecture

2.2. Error Detection and Correction ECC

Highly sophisticated Error Correction Code algorithms are implemented. The ECC unit consists of the Parity Unit (parity-byte generation) and the Syndrome Unit (syndrome-byte computation). This unit implements an algorithm that can correct 16 bits per 1 KB in an ECC block. Code-byte generation during write operations, as well as error detection during read operation, is implemented on the fly without any speed penalties.

2.3. Wear-Leveling

Flash memory can be erased within a limited number of times. This number is called the **erase cycle limit** or **write endurance limit** and is defined by the flash array vendor. The erase cycle limit applies to each individual erase block in the flash device.

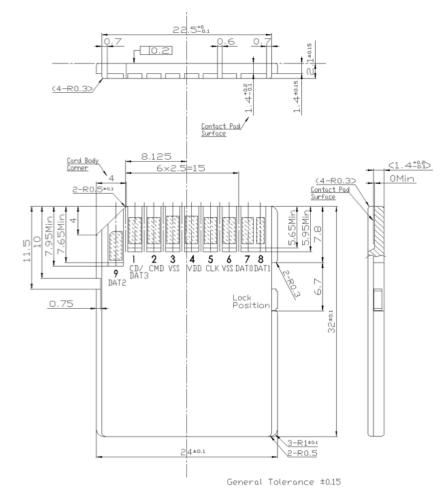

Innodisk Industrial SD Card uses a wear-leveling algorithm to ensure that consecutive writes of a specific sector are not written physically to the same page and block in the flash. This spreads flash media usage evenly across all pages, thereby extending flash lifetime.

2.4. Bad Blocks Management

Bad Blocks are blocks that contain one or more invalid bits whose reliability are not guaranteed. The Bad Blocks may be presented while the SD is shipped, or may develop during the life time of the SD. The Bad Blocks will not exceed more than 3% of the total device volume. When the Bad Blocks is detected, it will be flagged, and not be used anymore. The SD implement Bad Blocks management, Bad Blocks replacement, Error Correct Code to avoid data error occurred. The functions will be enabled automatically to transfer data from Bad Blocks to spare blocks, and correct error bit.

3. Specifications

3.1. Mechanical Dimensions

Figure 3: Innodisk Industrial SD Card mechanical dimensions

Rev 1.9

3.2. Performance

Data Transfer Rate (Sequential Read/Write, Max.)

- Class 10: 4GB, 8GB, 16GB, 32GB
 - ◆ 20/16 MB/sec
- Class 6: 128MB, 256MB, 512MB, 1GB, 2GB
 - ◆ 19/12 MB/sec

3.3. NAND Flash Memory

Innodisk Industrial SLC SD Card uses Single Level Cell (SLC) NAND flash memory, which is non-volatility, high reliability and high speed memory storage. Read or Write data to flash memory for SD is control by micro processor.

3.4. Power Requirement

3.4.1. DC Input Voltage

2.7V to 3.6V

3.4.2. Power Mode

Auto stand-by and sleep mode

3.4.3. Power Consumption

Table 1: Innodisk Industrial SD Card power consumption

Sustained Read	40 mA
Sustained Write	60 mA
IDLE	180 µA

3.5. Storage Temperature Range

- Operating Temperature Range
 - Standard Grade: 0°C to +70°C
 - Wide Temp: -40°C to +85°C
- Storage Temperature Range: -55°C to +95°C

3.6. Humidity

Relative Humidity: 10-95%, non-condensing

3.7. Shock and Vibration

Table 2: Shock/Vibration Testing for Innodisk Industrial SD Card

Reliability	Test Conditions
Vibration	7 Hz to 2000 Hz, 5G, 3 axes
Mechanical Shock	Duration: 10ms, 50G, 3 axes

3.8. System Reliability

3.8.1. ECC Technology

High reliability based on the internal error correct code (ECC) function. Built-in ECC corrects up to 16 bits per 1 KB.

3.8.2. Mean Time between Failures (MTBF)

Table 2 summarizes the MTBF prediction results for various Innodisk Industrial SD Card configurations. The analysis is performed using a RAM Commander[™] failure rate prediction.

- Failure Rate: The total number of failures within an item population, divided by the total number of life units expended by that population, during a particular measurement interval under stated condition.
- Mean Time between Failures (MTBF): A basic measure of reliability for repairable items: The mean number of life units during which all parts of the item perform within their specified limits, during a particular measurement interval under stated conditions.

Product	Condition	MTBF (Hours)
Innodisk Industrial SD Card	Telcordia SR-332 GB, 25°C	> 4,000,000

Table 3: Innodisk Industrial SD Card MTBF

3.8.3. Enhanced Power Cycling Technology

In order to make sure Innodisk Industrial SD Card can work well under unstable

power supply environments. Our FW enhance the power cycling ability and pass

following test modes with 1,000 times.

- Non-Safe Mode test: Power off when accessing files.
- Safe Mode test: Power off when accessing files finish.

3.9. Certificate

• CE and FCC Compatibility

Innodisk Industrial SD Card conforms to CE and FCC requirements.

RoHS Compliance

Innodisk Industrial SD Card is fully compliant with RoHS directive.

3.10. Pin Description

3.10.1. Industrial SD Card Pin Direction

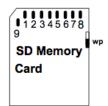

Figure 4: Signal Segment and Power Segment

3.10.2. Pin Assignment

Table 4 demonstrates Innodisk Industrial SD Card pin assignments.

Pin #	SD Mode			SPI Mode			
FIII #	Name	Type ¹	Description	Name	Type ¹	Description	
1	CD/DAT3 ²	I/O/PP ³	Card Detect/Data Line [Bit 3]	CS	l ³	Chip Select (neg true)	
2	CMD	I/O/PP	Command/Response	DI	I	Data In	
3	V _{SS1}	S	Supply voltage ground	V _{SS}	S	Supply voltage ground	
4	V _{DD}	S	Supply voltage	V_{DD}	S	Supply voltage	
5	CLK	Ι	Clock	SCLK	I	Clock	
6	V _{SS2}	S	Supply voltage ground	V_{SS2}	S	Supply voltage ground	
7	DAT0	I/O/PP	Data Line [Bit 0]	DO	O/PP	Data Out	
8	DAT1 ⁴	I/O/PP	Data Line [Bit 1]	RSV			
9	DAT2⁵	I/O/PP	Data Line [Bit 2]	RSV			

Table 4: Innodisk Industrial SD Card Pin Assignment

1) S: power supply; I: input; O: output using push-pull drivers; PP: I/O using push-pull drivers

2) The extended DAT lines (DAT1-DAT3) are inout on power up. They start to operate as DAT lines after

SET_BUS_WIDTH command. The Host shall keep its own DAT1-DAT3 lines in input mode, as well, while they are not used.

3) At power up this line has a 50KOhm pull up enabled in the card. This resistor serves two functions Card detection and Mode Selection. For Mode Selection, the host can drive the line high or let it be pulled high to select SD mode. If the host wants to select SPI mode it should drive the line low. For Card deception, the host detects that

the line is pulled high. This pull-up should be disconnected by the user, during regular data transfer, with

SET_CLR_CARD_DETECT (ACMD42) command.

4) DAT1 line may be used as Interrupt Output (from the Card) in SDIO mode during all the times that it is not in use for data transfer operations (refer to "SDIO Card Specification" for further details).

5) DAT2 line may be used as Read Wait signal in SDIO mode (refer to "SDIO Card Specification" for further details).

4. Electrical Specifications

4.1. General DC Character

Parameter	Symbol	Min.	Max.	Unit	Remark	
Peak voltage on all lines		-0.3	3.6	V		
All input leakage current		-10	10	μA		
All output leakage current		-10	10	μA		
Supply voltage for low voltage range	V _{DDL}	1.7	1.95	V		
Supply voltage for high voltage range	V _{DDH}	2.7	3.6	V		
Supply voltage differential		-0.5	0.5	V

4.2. Bus Signal Line Loading

Table 6: Bus Signal Line Loading

Parameter	Symbol	Min.	Max.	Unit	Remark
Pull up resistance for SDC line	R _{CMD}	10	100	K Ohm	To prevent bus floating
Pull up resistance for SDD line	R _{DAT}	10	100	K Ohm	To prevent bus floating
Total Bus capacitance for each	C		40	~ F	Single card
signal line	CL		40	pF	$C_{\text{HOST}}\text{+}C_{\text{BUS}}$ shall not exceed 30 pF
Signal line inductance			16	nH	f _{PP} <= 20 MHZ
Pull-up resistance inside card (pin 1)	R _{DAT3}	10	90	K Ohm	May be used for card detection

4.3. Bus Signal Level

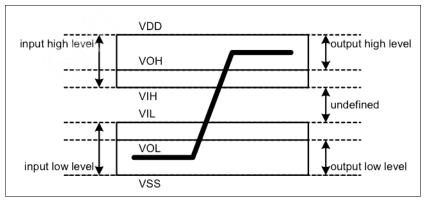

Figure 5: Bus Signal Level

Parameter	Symbol	Min.	Max.	Unit	Remark
Output High voltage	V _{OH}	2.4		V	$V_{DD} = 3.3V$
Output Low voltage	V _{OL}		0.4	V	$V_{DD} = 3.3V$
Input High voltage	V _{IH}	2	3.6	V	$V_{DD} = 3.3V$
Input Low voltage	V _{IL}	-0.3	0.8	V	$V_{DD} = 3.3V$
Output High voltage	V _{OH}	1.6		V	V _{DD} = 1.8V
Output Low voltage	V _{OL}		0.2	V	$V_{DD} = 1.8V$
Input High voltage	V _{IH}	1.26	2.1	V	$V_{DD} = 1.8V$
Input Low voltage	V _{IL}	-0.3	0.54	V	$V_{DD} = 1.8V$

Table 7: Bus Signal Level

4.4. Bus Timing (High Speed Mode)

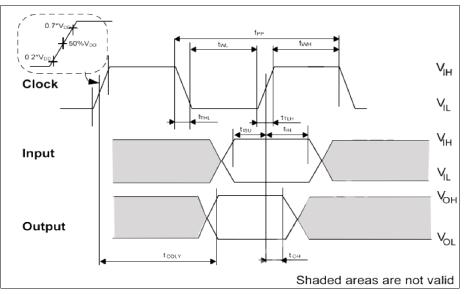

Table 8: Figh Speed Mode Bus Timing							
Parameter	Symbol	Min.	Max.	Unit	Remark		
	Input SDC	К					
Clock frequency data transfer mode	f _{PP}	0	50	MHz	C _{CARD} <= 10pF (1 card)		
Clock low time / Clock high time	t _{wL} / t _{wH}	7		ns	C _{CARD} <= 10pF (1 card)		
Clock rise time / Clock fall time	t _{TLH} / t _{THL}		3	ns	C _{CARD} <= 10pF (1 card)		
Input SDD/SDC, reference to SDCK							
Input set-up time	t _{ISU}	6		ns	C _{CARD} <= 10pF (1 card)		
Input hold time	t _{IH}	2		ns	C _{CARD} <= 10pF (1 card)		
Output SDD/SDC, reference to SDCK							
Output delay time during Data Transfer Mode	t _{ODLY}		14	ns	C _L <= 40pF (1 card)		
Output hold time	t _{OH}	2.5		ns	$C_L >= 15 pF (1 card)$		
Total System capacitance for each line	CL		40	pF			

Table 8: High Speed Mode Bus Timing

5. Register Table

5.1. Operation Condition Register (OCR)

The 32-bit operation conditions register stores the VDD voltage profile of the card. In addition, this register includes status information bits. One status bit is set if the card power up procedure has been finished. This register includes another status bit indicating the card capacity status after set power up status bit. The OCR register shall be implemented by all cards. As long as the card is busy, the corresponding bit (31) is set to LOW.

Additionally, this register includes 2 more status information bits. Bit 31 – Card power up status bit, this status bit is set if the card power up procedure has been finished. Bit 30 – Card capacity status bit, this status bit is set to 1 if card is High Capacity SD Memory Card. 0 indicates that the card is Standard Capacity SD Memory Card. The Card Capacity status bit is valid after the card power up procedure is completed and the card power up status bit is set to 1. The Host shall read this status bit to identify a Standard or High Capacity SD Memory Card.

OCR bit	VDD voltage window	Value			
[6:0]	Reserved	000 0000 b			
[7]	1.7V – 1.95V	0 b			
[14:8]	2.0V – 2.6V	000 0000 b			

Table 9: Innodisk Industrial SD Card OCR Table

[23:15]	2.7V – 3.6V 1 1111 1111 b			
[29:24]	Reserved 00 0000 b			
[30]	Card capacity status			
[31]	Card power status			

5.2. Card Identification Register (CID)

The Card IDentification (CID) register is 128 bits wide. It contains the card identification information used during the card identification phase. Every individual flash card shall have a unique identification number. The structure of the CID register is defined in the following table.

CID bit	Width	Name	Field
[127:120]	8	Manufacturer ID	MID
[119:104]	16	OEM/Application ID	OID
[103:64]	40	Product Name	PNM
[63:56]	8	Product Revision	PRV
[55:24]	32	Product Serial Number	PSN
[23:20]	4	Reserved	
[19:8]	12	Manufacturing Date	MDT
[7:1]	7	CRC7 check sum	CRC
[0]	1	Not used, always '1'	

 Table 10: Innodisk Industrial SD Card CID Table

5.3. Relative Card Address Register (RCA)

The writable 16-bit relative card address register carries the card address this is published by the card during the card identification. This address is used for the addressed host-card communication after the card identification procedure. The default value of the RCA register is 0x0000. The value 0x0000 is reserved to set all cards into the Stand-by State with CMD7

5.4. Card Specific Data Register (CSD)

The Card-Specific Data register provides information on how to access the card contents. The CSD defines the data format, error correction type, maximum data access time, data transfer speed, whether the DSR register can be used etc. The programmable part of the register can be changed by CMD27.

		e 11: Innodisk Industrial		· · ·

[54:52]	3	SD security support	SD_SECURITY	011 b	Secure-Protocol 2.0
[51:48]	4	DAT bus width support	SD_BUS_WIDTH	0101 b	Support 1 / 4 bits
[47:32]	16	Reserved			
[31:0]	32	Reserved			

Table 13: Innodisk Industrial SD Card SCR Table

6. Commands

The following table describe in detail all SD Memory Card bus commands.

CMD Index	Abbreviation	Description		
CMD0		Resets all cards to idle state		
	GO_IDLE_STATE Resets all cards to idle state Reserved			
CMD1				
CMD2	ALL_SEND_CID	Asks any card to send the CID numbers on the CMD line		
		(any card that is connected to the host will respond)		
CMD3	SEND_RELATIVE_ ADDR	Ask the card to publish a new relative address (RCA)		
CMD4	SET_DSR	Programs the DSR of all cards		
CMD5	Reserved for I/O cards			
CMD6	Reserved			
		Command toggles a card between the stand-by and		
		transfer states or between the programming and		
		disconnect states. In both cases the card is selected by		
CMD7	SELECT/DESELECT_CARD	its own relative address and gets deselected by any		
		other address; address 0 deselects all. In the case that		
		the RCA equals 0, then the host may do one of the		
		following:		
		- use other RCA number to perform card de-selection.		
		- re-send CMD3 to change its RCA number to other than		
		0 and then use CMD7 with RCA-0 for card de-selection		
		Send SD Memory Card interface condition, which		
CMD8	SEND_IF_COND	includes host supply voltage information and asks the		
CIVIDO		card whether card supports voltage. Reserved bits shall		
		be set to '0'		
CMD9	SEND_CSD	Addressed card sends its card-specific data (CSD) on		
CIVID9	SEND_COD	the CMD line.		
	SEND_CID	Addressed card sends its card identification (CID) on		
CMD10	SEND_CID	CMD the line.		
CMD11	VOLTAGE_SWITCH	Switch to 1.8V bus signaling level.		
CMD12	STOP_TRANSMISSION	Forces the card to stop transmission		
CMD13	SEND_STATUS	Addressed card sends its status register.		
CMD14	Reserved			

Table 14: SD Bus Mode Command Table

CMD15 GO_INACTIVE_STATE Sends an addressed card into the Inactive State. This command is used when the host explicitly wants to deactivate a card. Reserved bits shall be set to '0'. In the case of a Standard Capacity SD Memory Card, th command sets the block length (in bytes) for all followin block commands (read, write, lock). Default block lengt is fixed to 512 Bytes. Set length is valid for memory access commands only if partial block read operation a allowed in CSD. In the case of SDHC and SDXC Cards block length is used. This command doesn't affect memory read and write command. Always 512 Bytes fixed block length is used. This command is effective for LOCK_UNLOCK command. In both cases, if block lengt is set larger than 512 Bytes, the card sets the BLOCK_LEN_ERROR bit.In DDR50 mode, data is sampled on both edges of the clock. Therefore, block length shall always be even. CMD17 READ_SINGLE_BLOCK In the case of a Standard Capacity SD Memory Card, th command reads a block of the size selected by the SET_BLOCKLEN command. In case of SDHC and SDXC Cards, block length is fixed 512 Bytes regardless of the SET_BLOCKLEN command. CMD17 READ_MULTIPLE_BLOCK In the case of a Standard Capacity SD Memory Card, th command reads a block of the size selected by the SET_BLOCKLEN command. CMD18 READ_MULTIPLE_BLOCK Continuously transfers data blocks from card to host un interrupted by a STOP_TRANSMISSION command.
CMD16 SET_BLOCKLEN In the case of a Standard Capacity SD Memory Card, th CMD16 SET_BLOCKLEN In the case of a Standard Capacity SD Memory Card, th CMD16 SET_BLOCKLEN In the case of a Standard Capacity SD Memory Card, th CMD16 SET_BLOCKLEN In the case of SDHC and SDXC Cards block length is used. This command sets the block length is used. This command doesn't affect memory read and write commands. Always 512 Bytes fixed block length is used. This command is effective for LOCK_UNLOCK command.In both cases, if block length is set larger than 512 Bytes, the card sets the BLOCK_LEN In the case of a Standard Capacity SD Memory Card, th command reads a block of the size selected by the SET_BLOCKLE_BLOCK In the case of a Standard Capacity SD Memory Card, th command reads a block of the size selected by the SET_BLOCKLEN command. In the case of SDHC and SDXC Cards, block length is fixe SINGLE_BLOCK READ_SINGLE_BLOCK READ_MULTIPLE_BLOCK READ_MULTIPLE_BLOCK BLOCK length is fixed 512 Bytes regardless of the Block length is fixed 512 Bytes regardless of the
CMD16 SET_BLOCKLEN In the case of a Standard Capacity SD Memory Card, th command sets the block length (in bytes) for all followin block commands (read, write, lock). Default block length is fixed to 512 Bytes. Set length is valid for memory access commands only if partial block read operation a allowed in CSD. In the case of SDHC and SDXC Cards block length set by CMD16 command doesn't affect memory read and write commands. Always 512 Bytes fixed block length is used. This command is effective for LOCK_UNLOCK command. In both cases, if block lengt is set larger than 512 Bytes, the card sets the BLOCK_LEN_ERROR bit. In DDR50 mode, data is sampled on both edges of the clock. Therefore, block length shall always be even. CMD17 READ_SINGLE_BLOCK In the case of a Standard Capacity SD Memory Card, th command reads a block of the size selected by the SET_BLOCKLEN command. CMD18 READ_MULTIPLE_BLOCK Continuously transfers data blocks from card to host un interrupted by a STOP_TRANSMISSION command.
CMD16SET_BLOCKLENcommand sets the block length (in bytes) for all following block commands (read, write, lock). Default block length is fixed to 512 Bytes. Set length is valid for memory access commands only if partial block read operation at allowed in CSD. In the case of SDHC and SDXC Cards block length set by CMD16 command doesn't affect memory read and write commands. Always 512 Bytes fixed block length is used. This command is effective for LOCK_UNLOCK command. In both cases, if block length is set larger than 512 Bytes, the card sets the BLOCK_LEN_ERROR bit. In DDR50 mode, data is sampled on both edges of the clock. Therefore, block length shall always be even.CMD17READ_SINGLE_BLOCKIn the case of a Standard Capacity SD Memory Card, the command reads a block of the size selected by the SET_BLOCKLEN command. In case of SDHC and SDXC Cards, block length is fixe 512 Bytes regardless of the SET_BLOCKLEN command. In case of SDHC and SDXC Cards, block length is fixe fixed block length is fixed 512 Bytes regardless of the set arger than 512 Bytes regardless of the set arger than 512 Bytes regardless of the set arger than 512 Bytes. SET_BLOCKLEN command. In case of a Standard Capacity SD Memory Card, the command reads a block of the size selected by the SET_BLOCKLEN command. In case of SDHC and SDXC Cards, block length is fixed 512 Bytes regardless of the SET_BLOCKLEN command. Block length is fixed 512 Bytes regardless of the set as Stop_TRANSMISSION command. Block length is fixed 512 Bytes regardless of the
CMD16SET_BLOCKLENblock commands (read, write, lock). Default block length is fixed to 512 Bytes. Set length is valid for memory access commands only if partial block read operation a allowed in CSD. In the case of SDHC and SDXC Cards block length set by CMD16 command doesn't affect memory read and write commands. Always 512 Bytes fixed block length is used. This command is effective for LOCK_UNLOCK command.In both cases, if block length is set larger than 512 Bytes, the card sets the BLOCK_LEN_ERROR bit.In DDR50 mode, data is sampled on both edges of the clock. Therefore, block length shall always be even.CMD17READ_SINGLE_BLOCKIn the case of a Standard Capacity SD Memory Card, the command reads a block of the size selected by the SET_BLOCKLEN command. In case of SDHC and SDXC Cards, block length is fixe 512 Bytes regardless of the SET_BLOCKLEN command. Block length is fixed 512 Bytes regardless of the STP_TRANSMISSION command. Block length is fixed 512 Bytes regardless of the
CMD16SET_BLOCKLENis fixed to 512 Bytes. Set length is valid for memory access commands only if partial block read operation a allowed in CSD. In the case of SDHC and SDXC Cards block length set by CMD16 command doesn't affect memory read and write commands. Always 512 Bytes fixed block length is used. This command is effective for LOCK_UNLOCK command.In both cases, if block lengt is set larger than 512 Bytes, the card sets the BLOCK_LEN_ERROR bit.In DDR50 mode, data is sampled on both edges of the clock. Therefore, block length shall always be even.CMD17READ_SINGLE_ BLOCKIn the case of a Standard Capacity SD Memory Card, the command reads a block of the size selected by the SET_BLOCKLEN command. In cases of SDHC and SDXC Cards, block length is fixe 512 Bytes regardless of the SET_BLOCKLEN command. READ_MULTIPLE_BLOCKCMD18READ_MULTIPLE_BLOCKContinuously transfers data blocks from card to host un interrupted by a STOP_TRANSMISSION command. Block length is fixed 512 Bytes regardless of the
CMD16SET_BLOCKLENaccess commands only if partial block read operation a allowed in CSD. In the case of SDHC and SDXC Cards block length set by CMD16 command doesn't affect memory read and write commands. Always 512 Bytes fixed block length is used. This command is effective for LOCK_UNLOCK command.In both cases, if block lengt is set larger than 512 Bytes, the card sets the BLOCK_LEN_ERROR bit.In DDR50 mode, data is sampled on both edges of the clock. Therefore, block length shall always be even.CMD17READ_SINGLE_BLOCKIn the case of a Standard Capacity SD Memory Card, th command reads a block of the size selected by the SET_BLOCKLEN command. In case of SDHC and SDXC Cards, block length is fixe 512 Bytes regardless of the SET_BLOCKLEN command. Block length is fixed 512 Bytes regardless of the SION command. Block length is fixed 512 Bytes regardless of the
CMD16SET_BLOCKLENallowed in CSD. In the case of SDHC and SDXC Cards block length set by CMD16 command doesn't affect memory read and write commands. Always 512 Bytes fixed block length is used. This command is effective for LOCK_UNLOCK command. In both cases, if block lengt is set larger than 512 Bytes, the card sets the BLOCK_LEN_ERROR bit. In DDR50 mode, data is sampled on both edges of the clock. Therefore, block length shall always be even.CMD17READ_SINGLE_BLOCKIn the case of a Standard Capacity SD Memory Card, the command reads a block of the size selected by the SET_BLOCKLEN command. In case of SDHC and SDXC Cards, block length is fixed 512 Bytes regardless of the SET_BLOCKLEN command. Block length is fixed 512 Bytes regardless of theCMD18READ_MULTIPLE_BLOCKContinuously transfers data blocks from card to host un interrupted by a STOP_TRANSMISSION command. Block length is fixed 512 Bytes regardless of the
CMD16SET_BLOCKLENblock length set by CMD16 command doesn't affect memory read and write commands. Always 512 Bytes fixed block length is used. This command is effective for LOCK_UNLOCK command.In both cases, if block lengt is set larger than 512 Bytes, the card sets the BLOCK_LEN_ERROR bit.In DDR50 mode, data is sampled on both edges of the clock. Therefore, block length shall always be even.CMD17READ_SINGLE_BLOCKIn the case of a Standard Capacity SD Memory Card, the command reads a block of the size selected by the SET_BLOCKLEN command. In cases of SDHC and SDXC Cards, block length is fixed 512 Bytes regardless of the SET_BLOCKLEN command. Block length is fixed 512 Bytes regardless of theCMD18READ_MULTIPLE_BLOCKContinuously transfers data blocks from card to host un interrupted by a STOP_TRANSMISSION command. Block length is fixed 512 Bytes regardless of the
CMD16 SET_BLOCKLEN memory read and write commands. Always 512 Bytes fixed block length is used. This command is effective for LOCK_UNLOCK command.In both cases, if block lengti is set larger than 512 Bytes, the card sets the BLOCK_LEN_ERROR bit.In DDR50 mode, data is sampled on both edges of the clock. Therefore, block length shall always be even. CMD17 READ_SINGLE_BLOCK In the case of a Standard Capacity SD Memory Card, the command reads a block of the size selected by the SET_BLOCKLEN command. CMD17 READ_SINGLE_BLOCK In case of SDHC and SDXC Cards, block length is fixe 512 Bytes regardless of the SET_BLOCKLEN command. CMD18 READ_MULTIPLE_BLOCK Continuously transfers data blocks from card to host un interrupted by a STOP_TRANSMISSION command.
CMD18 READ_MULTIPLE_BLOCK memory read and write commands. Always 512 Bytes remory read and write commands. Always 512 Bytes fixed block length is used. This command is effective for LOCK_UNLOCK command.In both cases, if block length is set larger than 512 Bytes, the card sets the BLOCK_LEN_ERROR bit.In DDR50 mode, data is sampled on both edges of the clock. Therefore, block Iength shall always be even. In the case of a Standard Capacity SD Memory Card, the command reads a block of the size selected by the SET_BLOCKLEN command. In cases of SDHC and SDXC Cards, block length is fixe 512 Bytes regardless of the SET_BLOCKLEN command. Interrupted by a STOP_TRANSMISSION command. Block length is fixed 512 Bytes regardless of the Block length is fixed 512 Bytes regardless of the
CMD17 READ_SINGLE_BLOCK LOCK_UNLOCK command.In both cases, if block length is set larger than 512 Bytes, the card sets the BLOCK_LEN_ERROR bit.In DDR50 mode, data is sampled on both edges of the clock. Therefore, block length shall always be even. CMD17 READ_SINGLE_BLOCK In the case of a Standard Capacity SD Memory Card, the command reads a block of the size selected by the SET_BLOCKLEN command. In case of SDHC and SDXC Cards, block length is fixed 512 Bytes regardless of the SET_BLOCKLEN command. Block length is fixed 512 Bytes regardless of the STOP_TRANSMISSION command. Block length is fixed 512 Bytes regardless of the STOP_TRANSMISSION command.
CMD17READ_MULTIPLE_BLOCKis set larger than 512 Bytes, the card sets the BLOCK_LEN_ERROR bit.In DDR50 mode, data is sampled on both edges of the clock. Therefore, block length shall always be even.CMD18READ_MULTIPLE_BLOCKIn the case of a Standard Capacity SD Memory Card, th command reads a block of the size selected by the SET_BLOCKLEN command. In cases of SDHC and SDXC Cards, block length is fixe 512 Bytes regardless of the SET_BLOCKLEN command. Continuously transfers data blocks from card to host un interrupted by a STOP_TRANSMISSION command. Block length is fixed 512 Bytes regardless of the
CMD17 READ_SINGLE_ BLOCK BLOCK_LEN_ERROR bit.In DDR50 mode, data is sampled on both edges of the clock. Therefore, block length shall always be even. In the case of a Standard Capacity SD Memory Card, the command reads a block of the size selected by the SET_BLOCKLEN command. In cases of SDHC and SDXC Cards, block length is fixe 512 Bytes regardless of the SET_BLOCKLEN command. READ_MULTIPLE_BLOCK Continuously transfers data blocks from card to host up interrupted by a STOP_TRANSMISSION command. Block length is fixed 512 Bytes regardless of the Block length is fixed 512 Bytes regardless of the
CMD17READ_SINGLE_ BLOCKsampled on both edges of the clock. Therefore, block length shall always be even.CMD17READ_SINGLE_ BLOCKIn the case of a Standard Capacity SD Memory Card, the command reads a block of the size selected by the SET_BLOCKLEN command. In cases of SDHC and SDXC Cards, block length is fixe 512 Bytes regardless of the SET_BLOCKLEN command Continuously transfers data blocks from card to host un interrupted by a STOP_TRANSMISSION command. Block length is fixed 512 Bytes regardless of the
Image: Constraint of the sector of the se
CMD17 READ_SINGLE_ BLOCK In the case of a Standard Capacity SD Memory Card, the command reads a block of the size selected by the SET_BLOCKLEN command. In cases of SDHC and SDXC Cards, block length is fixed 512 Bytes regardless of the SET_BLOCKLEN command. CMD18 READ_MULTIPLE_ BLOCK READ_MULTIPLE_BLOCK Continuously transfers data blocks from card to host up interrupted by a STOP_TRANSMISSION command. Block length is fixed 512 Bytes regardless of the
CMD17 READ_SINGLE_BLOCK command reads a block of the size selected by the SET_BLOCKLEN command. In caes of SDHC and SDXC Cards, block length is fixe 512 Bytes regardless of the SET_BLOCKLEN command CMD18 READ_MULTIPLE_BLOCK Continuously transfers data blocks from card to host un interrupted by a STOP_TRANSMISSION command. Block length is fixed 512 Bytes regardless of the
CMD17 READ_SINGLE_BLOCK SET_BLOCKLEN command. In cases of SDHC and SDXC Cards, block length is fixe 512 Bytes regardless of the SET_BLOCKLEN command. CMD18 READ_MULTIPLE_BLOCK Continuously transfers data blocks from card to host uninterrupted by a STOP_TRANSMISSION command. Block length is fixed 512 Bytes regardless of the STOP_TRANSMISSION command.
CMD18 READ_MULTIPLE_BLOCK In case of SDHC and SDXC Cards, block length is fixed 512 Bytes regardless of the SET_BLOCKLEN command. Block length is fixed 512 Bytes regardless of the SET_BLOCKLEN command.
CMD18 READ_MULTIPLE_BLOCK State State State State State State State State State State State State READ_MULTIPLE_BLOCK State State State
CMD18READ_MULTIPLE_ BLOCKContinuously transfers data blocks from card to host un interrupted by a STOP_TRANSMISSION command. Block length is fixed 512 Bytes regardless of the
CMD18READ_MULTIPLE_BLOCKinterrupted by a STOP_TRANSMISSION command. Block length is fixed 512 Bytes regardless of the
CMD18 READ_MULTIPLE_ BLOCK Block length is fixed 512 Bytes regardless of the
Block length is fixed 512 Bytes regardless of the
SET_BLOCKLEN command.
CMD19 SEND_TUNING_BLOCK 64 bytes tuning pattern is sent for SDR50 and SDR104
CMD20 SPEED_CLASS_CONTROL Speed Class control command.
CMD21-22 Reserved
CMD23 SET_BLOCK_COUNT Specify block count for CMD18 and CMD25.
In case of SDSC Card, block length is set by the
SET BLOCKLEN command.
CMD24 WRITE BLOCK SET_BLOCKLEN command.
CMD24 WRITE_BLOCK SET_BLOCKLEN command. In case of SDHC and SDXC Cards, block length is fixed
CMD24 WRITE_BLOCK SET_BLOCKLEN command. In case of SDHC and SDXC Cards, block length is fixe 512 Bytes regardless of the SET_BLOCKLEN command.

		command.		
CMD26	Reserved For Manufacturer			
CMD27	PROGRAM_CSD	Programming of the programmable bits of the CSD.		
CMD28	SET_WRITE_PROT	If the card has write protection features, this command sets the write protection bit of the addressed group. The properties of write protection are coded in the card specific data (WP_GRP_SIZE).SDHC and SDXC Cards do not support this command.		
CMD29	CLR_WRITE_PROT	If the card provides write protection features, this command clears the write protection bit of the addressed group. SDHC and SDXC Cards do not support this command.		
CMD30	SEND_WRITE_ PROT	If the card provides write protection features, this command asks the card to send the status of the write protection bits. SDHC and SDXC Cards do not support this command.		
CMD31	Reserved			
CMD32	ERASE_WR_BLK_START	Sets the address of the first sector to be erased.		
CMD33	ERASE_WR_BLK_END	Sets the address of the last sector of the continuous range to be erased.		
CMD34-37	Reserved			
CMD38	ERASE	Erases all previously selected write blocks.		
CMD39	Reserved			
CMD40	Reserved for Secutiry Specification			
CMD41	Reserved			
CMD42	LOCK_UNLOCK	Used to set/reset the password or lock/unlock the card. The size of the data block is set by the SET_BLOCK_LEN command. Reserved bits in the argument and in Lock Card Data Structure shall be set to 0.		
CMD43-51	Reserved			
CMD52-54	Commands for SDIO			
CMD55	APP_CMD	Indicates to the card that the next command is an application specific command rather than a standard command.		

CMD56 CMD57-59 CMD60-63	GEN_CMD Reserved Reserved For Manufacturer	Used either to transfer a data block to the card or to get a data block from the card for general purpose / application specific commands. In case of a SDSC Card, block length is set by the SET_BLOCK_LEN command. In case of SDHC and SDXC Cards, block length is fixed to 512 Bytes. The host sets RD/WR=1 for reading data from the card and sets to 0 for writing data to the card.								
ACMD Index	Application-specific Commands C Abbreviation Description									
ACMD1-5	Reserved									
ACMD6	SET_BUS_WIDTH	Defines the data bus width ('00'-1bit or '10'=4 bits bus_ to be used for data transfer. The allowed data bus widths are given in SCR register.								
ACMD7-12	Reserved									
ACMD13	SD_STATUS Send the SD Status.									
ACMD14-16	Reserved for Security Specification									
ACMD17	Reserved									
ACMD18	Reserved for SD security applicati	ons								
ACMD19-21	Reserved									
ACMD22	SEND_NUM_WR_BLOCKS	Send the number of the written (without error) write blocks. Responds with 32bit+CRC data block. If WRITE_BL_PARTIAL='0', the unit of ACMD22 is always 512 byte. If WRITE_BL_PARTIAL='1', the unit of ACMD22 is a block length which was used when the write command was executed.								
ACMD23	SET_WR_BLK_ERASE_COUNT	Set the number of write blocks to be pre-erased before writing (to be used for faster Multiple Block WR command). "1"=default (one wr block).								
ACMD24	Reserved									
ACMD25-28	Reserved for SD security applications									
ACMD29	Reserved									
ACMD30-35	Reserved for Security Specification									
ACMD36-37	Reserved									
ACMD38	Reserved for SD security applications									
ACMD39-40	Reserved									

ACMD41 SD_SEN	SD_SEND_OP_COND	Sends host capacity support information (HCS) and asks the accessed card to send its operating confition register (OCR) content in the response on the CMD line. HCS is effective when card receives SEND_IF_COND command. Sends request to switch to 1.8V signaling (S18R). Reserved bit shall be set to '0'. CCS bit is assigned to OCR[30]. XPC controls the maximum current in the default speed							
		mode of SDXC card. XPC=0 means 100mA (max.) but speed class is not supported. XPC=1 means 150mA							
		(max.) and speed class is supported.							
ACMD42	SET_CLR_CARD_DETECT	Connect[1]/Disconnect[0] the 50 Kohm pull-up resisto							
//OMD42		CD/DAT3 (pin 1) of the card.							
ACMD43-49	Reserved for SD security applications								
ACMD50	Reserved								
ACMD51	SEND_SCR	Reads the SD Configuration Register (SCR).							
ACMD52-54	Reserved for Security Specification								
ACMD55	Not exist	Equivalent to CMD55.							
ACMD56-59	Reserved for Security Specification
