

ULTRA-MINIATURE SWITCHES WITH HIGH PRECISION

AH1 (FJ) SWITCH

D 1R

FEATURES

• Integrally molded terminal block prevents soldering flux from entering into housing

- Compact size —minimizes size of equipment
- Flat terminal shape-makes
- soldering easy
- Low-level circuit type available
- Self-standing PC board terminal type available

TYPICAL APPLICATIONS

- Computer mouse
- Charger unit for mobile phone
- Detection of key position for
- automobiles

Compliance with RoHS Directive

NOTES

1. Fixing

1) Use 2mm mounting screws to attach switches with Max. 0.098 N·m torque. Use of screw washers or adhesive lock is recommended.

2) When the operation object is in the free position, force should not be applied directly to the actuator or to the pin plunger. Also force should be applied to the pin plunger from vertical direction to the switch.

3) In setting the movement after operation, the over-travel should be set from 70% to 100%. Setting the movement less than 70% may cause degrading of the electrical mechanical performance.

2. When specifying AH1 switches, allow $\pm 20\%$ to the listed operating and release forces.

3. Soldering operation

1) For manual soldering: 18 W soldering iron, soldering completed within 3 seconds; do not apply force to the terminals.

2) For automatic soldering tank: 260°C immersion, completed within 5 seconds, 350°C immersion, completed within 3 seconds.

4. When switching low-level circuits, AH1 low-level circuit type is recommended.
