Check

Single PLC with two roles

Enter an era in which you can see the "current state" of the remote site.

Automation Controls

Move
Control machinery and facilities
Along with operation speed and capacity, delivers ease of use for design, production, and maintenance.
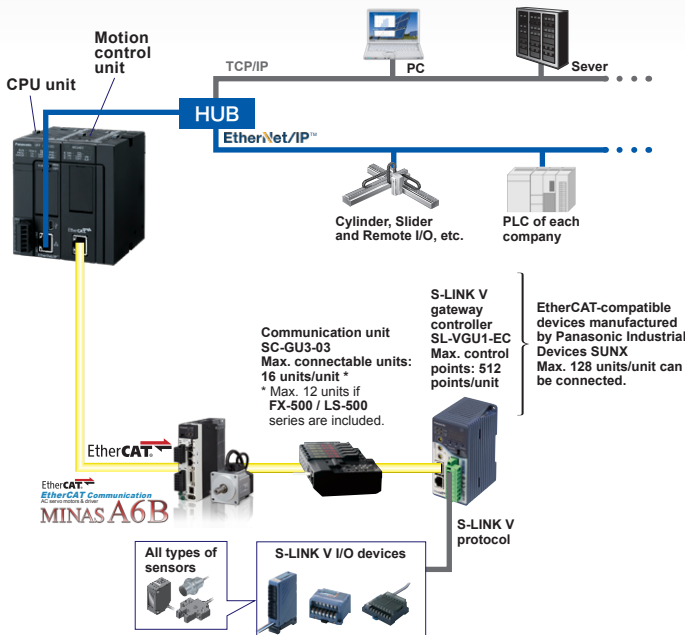

Compatible with industrial network Ethernet protocol

The **FP7** supports EtherNet/IP and EtherCAT and provides an integrated system through the control of sensors and servo motors, etc., and data transmission with high-order servers.
* EtherNet/IP is a trademark of ODVA, Inc.
* EtherCAT is registered trademark and patented technology, licensed by Beckhoff Automation Gmbh, Germany.

PLC of each company

EtherCAT

EtherCAT Communication
AC servo motors & driver
MINAS A6B

Communication unit SC-GU3-03
Max. connectable units: 16 units/unit *
* Max. 12 units if FX-500 / LS-500 series are included.

S-LINK V gateway controller SL-VGU1-EC
Max. control points: 512 points/unit

EtherCAT-compatible devices manufactured by Panasonic Industrial Devices SUNX
Max. 128 units/unit can be connected.

All types of sensors

S-LINK V I/O devices

S-LINK V protocol

Cassette system reduces unit cost and footprint

With ease and at low cost, extend the serial communication and analog functionality of CPU units.
Serial communication cassettes
- RS-232C
- RS-422 / RS-485
- 2 channels

Function cassettes
- Analog input
- Analog input and output
- Thermocouple input

Ethernet communication cassette
* Ethernet is a registered trademark of Fuji Xerox Co., Ltd. and Xerox Corporation.

No communication unit

Moreover, when used as a serial communication unit, expansion to as many as 35 channels is possible. Reduces cost and footprint.

4 channels

CPU unit

Supports max. 8 units and 32 ports!!

End unit

Ideal for Simple Standalone Systems

Achieve high-performance extensibility, lower cost and slimmer form factor.
34 mm
1.339 in

Best value model FP7 CPU unit AFP7CPS21

Saves space and reduces cost
Another **FP7** advantage: add-on cassette system reduces unit cost and footprint.

Function cassettes
- Analog input
- Analog input and output
- Thermocouple input

Communication cassettes
- Serial
- Ethernet

16 intelligent units can be mounted
Low in cost, 16 intelligent units can be mounted.

Up to 16 units can be mounted!

Analog sampling that doesn't depend on CPU

Sampling and data collection in the analog unit! Ideal for high-accuracy measurement applications because with the fixed cycle, analog signal can be held in the buffer

Dependent on scan of CPU

The scan gets delayed when the CPU slows down due to other processes and sampling becomes sporadic

Occurrence of failure

### Sampling in the analog unit

Accurate sampling possible with fixed cycle.

- Doesn't depend on CPU scanning
- Analog buffering
- High-speed conversion: 25 μs/ch
- Overall accuracy: ± 0.05 % F.S. (at +25 °C **+77 °F**)

Select the functions you need and control various devices

Multifunctional control achieved in one unit ! Supports high-speed counter input, interrupt input, pulse output, positioning output* and comparison output.
* The positioning type **AFP7MXY32DWDH** only.

5 V input
Encoder / microcomputer / two-wire system sensor, etc.

DC input

Interrupt input

High-speed counter input

Transistor output NPN, PNP, Differential output and 5 V

Comparison output

Pulse output

PWM output

Positioning output*
*Supports only positioning type

+ Information

Collect

Collect work site information
The FP7 can collect voltage, electric power, temperature, production output, alarm notifications, and other information.
Equipped to deal with any protocol, it can be installed in existing facilities to enable collection of information.

Communication method
- EtherNet/IP
- MC protocol
- Modbus (RTU and TCP)

FP7

Existing PLC

Existing facilities

Collect

To enable information collection, because the **FP7** can deal with any protocol for Ethernet / serial communications, the **FP7** can be installed in existing facilities.

Communicating with up to 220 equipment units

Communicate easily with many units, including automation control equipment such as PLCs and information equipment such as PCs.
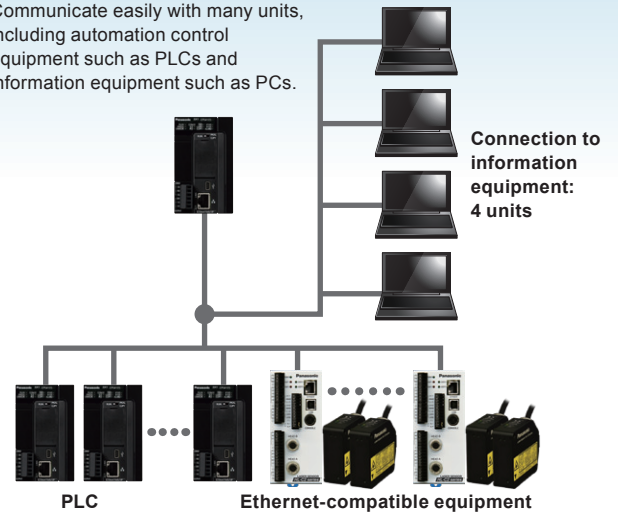

Connection to information equipment: 4 units

PLC   **Ethernet-compatible equipment**

Connection to automation control equipment: 216 units (Simultaneous communication: 16 units)
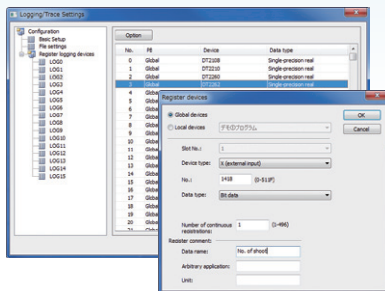

Store

Logs collected information
The FP7 securely stores and carries out log management of collected information assets.

### Easy multiple concurrent logging

Logging set up is done via the configuration screen.
Moreover, it is possible to keep up to 16 files concurrently active.

- Various triggers: periodic, cycle, bit, startup, etc.

Protection of log data

Diagnosis of rewrite life of SD memory card helps protect valuable information assets.

*Diagnosis possible when Panasonic industrial-spec SD memory cards are used.

Use program and data register sharing to resolve data space shortage.
No need repurchase expensive upgrade models.

Example: 196 k steps type CPU unit **AFP7CPS41E(S)**

Initial state   Data-driven setting   Program-driven setting

Program: 196 k steps

Data register: 256 k words

Program: 145 k steps

Data register: 512 k words

Program: 221 k steps

Data register: 128 k words

E.g. for large amount of log data

E.g. for large amount of operation programs

Reference value: for 196 k steps type CPU unit (Note)

Program	234 k steps	221 k steps	196 k steps	145 k steps	52 k steps
Data register	64 k words	128 k words	256 k words	512 k words	976 k words

Note: For data register (DT), data up to 256 k words can be backed up.
+ Information

Transfer

Information can be transferred to different types of media
FP7 transmits information to PC, server or the cloud, etc.

Cloud

Information can be transferred to different types of media

Allows the PC to read the logging data in the **FP7**'s SD memory card and to write setting values and other parameters.

Read from FP7

Data file

Write to FP7

Manage your records by summarizing measurement data from your sensors together with result information from the inspection machines.

+ Information

Check

Check information at your fingertips

Data collected by the FP7 can be displayed in a web browser. Via smartphone or PC, it's easy to check the current state of the work site.

Web server function

Monitor and control the **FP7** without the use of custom software. Users can check the accumulated data in the **FP7** with a browser.

Data

Operation can be monitored with a browser and control instructions can be sent from a browser.

1. Check out status of greenhouse / food processing

With data always at hand, there's no need to go to the work site to check indoor temperature and humidity or the operation of pumps, heaters, and other equipment.

Greenhouse 1
Temp. 24.5 °C Humidity 54.8 %

2. Operational status and production log management for production line

Operational status of the production line can be checked and traceability production control can be carried out. Current production line information can be collected and displayed on Web interface.

PLC of other company **FP7**

Production control system

MC protocol*
Modbus (TCP)
EtherNet/IP

*QnA compatibility: 3E frame binary
Batch read / write
Master / slave communication

3. Building lighting / entry and exit management

Through a web interface, it is possible to check the status of lighting in buildings and apartments, and to building entries and exits.

3F
2F
1F

Lighting and Entry/Exit management system

Information updates viewable in e-mail.

The managers can receive and view e-mailed malfunction notifications and daily reports of equipment operations.

E-mail sending function (SSL-compatible)

Use instructions and timings controlled by the **FP7** to send e-mails on a pre-set schedule or when a pre-set condition changes in the PLC. The e-mails can have data files attached and communication is SSL-capable to protect the e-mails.

E-mail

Receive monitoring e-mails.
Receive emergency e-mails.

Send the results and a notice of completion when a long-term test is completed.

E-mail

The long-term test (30-day) has been completed.
Average temperature: ○○ °C
Duration time: ○○ hours
Number of test cycles: ○○ times

Receive a daily e-mail on your smartphone with the amount of electric power generated.

E-mail

Receive at 6 PM every day

Amount of today's electric power generation: 430 kWh
For more information on web server function, please see this catalog.

Maintenance

Historical archiving of program changes
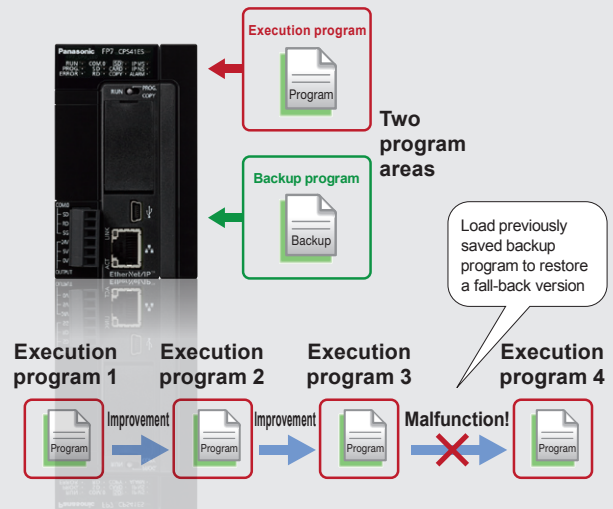

Operational events to CPU and program editing events are logged. Useful for debugging and tracing the cause of malfunctions

Date of occurrence	Time	Trigger
2018/11/21	14:05:35	Power: ON
2018/11/21	14:07:13	Open cover
2018/11/21	14:20:25	Insert SD memory card.
2018/11/21	14:30:19	Close cover
2018/11/21	14:31:00	Download program
2018/11/21	14:33:10	Switch operation mode to RUN
2018/11/21	14:35:12	Program edition during RUN
2018/11/21	14:35:32	Upload program
2018/11/21	14:40:07	Power: OFF

*Data logs are virtual.

The built-in program backup allows users to immediately recover factory default conditions.

The CPU unit can store two programs. In the event of fault, no SD memory card is needed to return to a previously saved backup program.

Two program areas

Execution program

Program

Backup program

Backup

Load previously saved backup program to restore a fall-back version

Execution program 1 → Improvement → Execution program 2 → Improvement → Execution program 3 → Malfunction! → Execution program 4

Set a maintenance schedule that is based on an automatic measurement of contact switching cycles or overall ON time.

Service intervals can be timed according to logged contact switching cycles, and power-on duration, thus enabling preventive maintenance of equipment and peripheral equipment.

Input contacts (X): Automatically measures and logs total ON times and number of ON operations of connected sensors.

Output contacts (Y): Automatically measures and logs total ON times and number of ON operations of connected actuators. The maintenance schedules for relays, motors, etc. can be optimized.

$$T = T1 + T2 + T3$$

Contact ON time

Number of ON operations of contact

1 time   2 times   3 times
Records the PLC's ON time

Equipment operating time can be estimated. You can decide which equipment to give priority to reactivate if more than one item of equipment is idle.

No need to replace a battery by data back up function without battery.

Equipment maintenance tasks are reduced because battery is not required. And, to save power, equipment can be switched off without hesitation.
Battery

Item	Without battery	With battery
Program holding	Yes	Yes
Data register holding (Note 1)	Yes	Yes
Clock / calendar operation	No (Note 2)	Yes

Notes: 1) Data register (DT) of up to 256 k words can be backed up.
2) Clock / calendar operation can be held for about a week if the equipment is switched off. (Allow at least 30 minutes of equipment ON time.)

The built-in clock / calendar function can be adjusted via Ethernet. Adjustment at power start up allows the battery-free system to be configured.
Security and Compact design

Program level encryption ensures protection against copying program code.

Security enhanced type

Encrypted program ⟫

- Programs cannot be decrypted.
- Even if the program is copied, it will not operate.

Program

Program

Program

Decryption key

[Decryption key]
Activation is possible only if the decryption key on the **FP7** matches that of the program. (Copied programs will not be activated on other **FP7**.)

Copy → Program **Insertion** → 🚫

Original **FP7**   Copied program   Other **FP7**
Any attempt to copy the installed equipment's program into a newly purchased **FP7** will fail due to an unmatched decryption key, resulting in the equipment becoming inoperable.

*When exporting to China, please use a CPU unit that does not have an encryption function.

A high performance PLC with a small footprint.

90 mm
3.543 in
Space saving 83 mm 3.268 in

Without the requirement of a power supply unit or backplane, you can reduce the cost and footprint of your PLC configuration.

No power supply unit

No backplane

A 24 V DC power can be directly connected from the control panel.

*Add a power supply unit if AC power is required.

(Power supply unit cannot be used with **AFP7CPS21** CPU unit.)

CPU units

Basic performance [For AFP7CPS41E(S)]	
• Operation speed:	Min. 11 ns/step
• Program capacity:	196 k steps
• Data registers:	256 k words
• Number of unit connection:	Max. 16 units

AFP7CPS41E(S) **EtherNet/IP™**
AFP7CPS31E(S) **EtherNet/IP™**
AFP7CPS31(S)
AFP7CPS21
End unit (attached to the each CPU unit)

Compact design and class-leading high performance

1. The function is expanded easily with cassette interface.
The function extension is possible without increasing the width of the unit. The cassettes support RS-232C, RS-422 and RS-485 for series communication, Ethernet communication and various analog input and output.

2. High-capacity SD (SDHC) memory cards of up to 32 GB are supported.
Enables large storage for log data   *except for **AFP7CPS21**

3. High performance
Scan times of 20 µs or less and minimum execution times of 1 ms at 60 k steps. System is designed so that frequent Ethernet communication has almost no effect on processing speed.

4. All communications ports are safely isolated.
Confidently use any port - RS-422 / RS-485 and LAN ports, as well as USB and RS-232C ports - each is isolated.

5. High function types, increased security (encryption), are available.
*When exporting to China, please use a CPU that does not have an encryption function.

■ Control specifications

Item		AFP7CPS41E(S) (Note 6)				
Memory capacity	Memory selection pattern (Note 1)	1	2	3 (Factory default)	4	5
	Program (steps) (Note 2)	234,000	221,500	196,000	144,500	51,500
	Data register (words) (Note 2)	65,536	131,072	262,144	524,288	999,424
	Number of max. program block (PB)	468	443	392	289	103

Item		AFP7CPS31E(S) / AFP7CPS31(S) (Note 6)			
Memory capacity	Memory selection pattern (Note 1)	1 (Factory default)	2	3	4
	Program (steps) (Note 2)	121,500	96,000	64,000	32,000
	Data register (words) (Note 2)	131,072	262,144	425,984	589,824
	Number of max. program block (PB)	243	192	128	64

Item		AFP7CPS21	
Memory capacity	Memory selection pattern (Note 1)	1 (Factory default)	2
	Program (steps) (Note 2)	64,000	32,000
	Data register (words) (Note 2)	131,072	262,144
	Number of max. program block (PB)	128	64

Item	AFP7CPS41E(S) / AFP7CPS31E(S) / AFP7CPS31(S) / AFP7CPS21
Programming method	Relay symbol method
Control method	Cyclic operation method
Program memory	Built-in flash ROM (no backup battery required)
Operation speed	Basic instruction: Min. 11 ns/step (**AFP7CPS21**: 14 ns/step)
External input (X) / output (Y)	8,192 points (Note 4) / 8,192 points (Note 4)
Internal relays (R)	32,768 points
System relays (SR)	Indicate operation status of various relays is shown.
Link relays (L)	16,384 points
Timers (T)	4,096 points: Timer capable of counting (units: 10 µs, 1 ms, 10 ms, 100 ms or 1 sec.) × 4,294,967,295
Counters (C)	1,024 points, Counter capable of counting 1 to 4,294,967,295
Link data registers (LD)	16,384 words
System data registers (SD)	Internal operation status of various registers is shown.
Index registers (I0 to IE)	15 long words / With switching function
Master control relay (MCR)	Unlimited
Number of labels (LOOP)	Max. 65,535 points for each program block (PB)
Differential points	Unlimited
Number of step ladders	Unlimited
Number of subroutines	Max. 65,535 points for each program block (PB)
Number of interrupt programs	1 periodical interrupt program
SD memory card function	SDHC memory cards of up to 32 GB are usable. *except for **AFP7CPS21**
Constant scan	Available (0 to 125 ms)
Clock / calendar (Note 3)	Year (last two digits), month, day, hours (24-hour display) minutes, seconds, day of week
Battery life	3.3 years or more (at +25 °C +77 °F) (when no power is supplied) *except for **AFP7CPS21**
Security function (Note 5)	Password / Restricted distribution / Read disable setting / Encryption
PLC link function (Serial communication / MEWNET-W0)	Max. 16 units, link relays: 1,024 points, link registers: 128 words. (Data transfer and remote programming are not supported) (Link area allocation is switchable between the first and the second half)

Notes: 1) The factory default setting is pattern 3 for **AFP7CPS41E(S)** and pattern 1 for **AFP7CPS31E(S)**, **AFP7CPS31(S)** and **AFP7CPS21**.
2) For data register (DT), data up to 262,144 words can be backed up.
3) Precision of calendar; At 0 °C +32 °F, 95 sec. or less error per month, at +25 °C +77 °F, 15 sec. or less error per month, at +55 °C +131 °F, 130 sec. or less error per month
4) Hardware configuration governs the actually usable number of I/O points. When I/O points are not actually used, usable as internal relays.
5) Encryption can be used for **AFP7CPS41ES**, **AFP7CPS31ES** and **AFP7CPS31S**.
6) Products with an **"S"** at the end of a part number have the encryption function.

■ COM port communication specifications

Item	Specifications
Interface	RS-232C, three-wire system, 1 channel (Note)
Transmission distance	15 m 49.213 ft
Transmission speed	300, 600, 1200, 2400, 4800, 9600, 19200, 38400, 57600, 115200, 230400 bits/sec.
Communication method / Synchronous method	Half-duplex system / Start-stop synchronization system
Transmission format	Stop bit: 1 bit / 2 bits
	Parity: none / odd / even
	Data length: 7 bits / 8 bits
	Start code: with STX / without STX
	End code: CR / CR + LF / none / ETX
Data transmission order	Transmit from bit 0 in character units.
Communication mode	General-purpose communication, Computer link and MODBUS-RTU

Note: SD, RD and SG terminals are isolated from internal circuits.

■ Dedicated power supply output port specifications for GT series programmable display

Output terminal (Note 1)	Connecting programmable display model
5 V	For 5 V DC type **GT** series Programmable Display
24 V (Note 2)	For 24 V DC type **GT** series Programmable Display

Notes: 1) 5 V and 24 V DC types are not usable at the same time.
2) Use 21.6 to 26.4 V DC to power the CPU unit.
Please check the "GT Series Manual" for grounding of the **GT** series programmable display.
The **AFP7CPS21** is not provided with this port.

■ LAN port communication specifications [except for AFP7CPS31(S) / AFP7CPS21]

Item	Specifications
Communication interface	Ethernet 100BASE-TX / 10BASE-T
Baud rate	100 Mbps, 10 Mbps auto negotiation function
Total cable length	100 m 328 ft (500 m 1,640 ft when a repeater is used)
Number of nodes	254 units
Number of simultaneous connections	Max. 220 connections (user connection: 216, system connection: 4)
Communication protocol (Communication layer)	TCP/IP, UDP
DNS	Supports name servers
DHCP / DHCPV6	Automatic IP address acquisition
FTP server / Client (SSL compatible)	Server function: file transfer, number of user: 3 Client function: data and file transfer
HTTP server / Client (SSL compatible)	Server function: system web, Customer web (8 MB), number of concurrent session: 16 Client function: data transfer
SMTP client (SSL compatible)	Client function: mail transfer
SNTP	Time adjustment function
General-purpose communication	16 kB / 1 connection (user connection: 1 to 16)
Dedicated communication	Slave communication (MEWTOCOL-COM, MEWTOCOL7-COM, MEWTOCOL-DAT, MODBUS-TCP, MC protocol (Note)) Master communication (MEWTOCOL-COM, MEWTOCOL-DAT, MODBUS-TCP, MC protocol (Note))

Note: MC protocol is a short form denoting MELSEC communication protocol; MELSEC is a registered trademark of Mitsubishi Electric Corporation.
QnA compatible 3E frame, only binary (bulk writing and bulk reading) use is available.
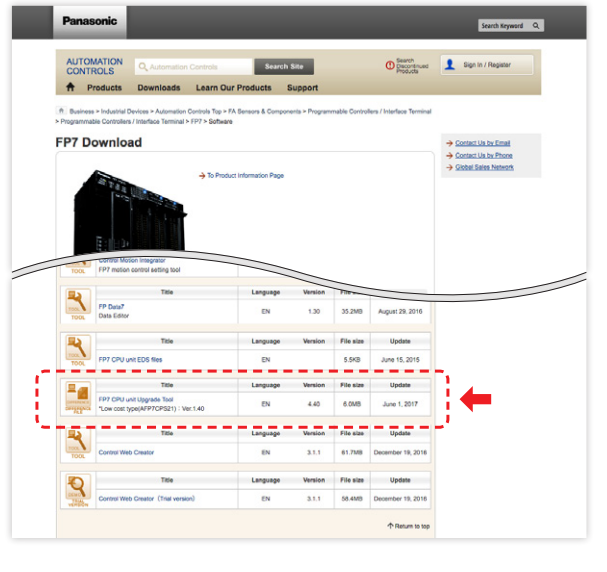

CPU units

■ Web server specifications

Item	Specifications
Compatible CPU unit	Ver. 3.30 or later CPU unit with built-in Ethernet function
Web server	Number of simultaneous accesses: 16 sessions System Web: system monitor function Custom Web: 13.83 MB max. content capacity
Control Web Creator compatible OS	Windows® 7 or higher
Web server accessible browsers	Windows® 　Google Chrome 　Mozilla Firefox 　Opera 　Internet Explorer OS X 　Safari 　Google Chrome 　Mozilla Firefox iOS 　Safari 　Google Chrome Android 　Google Chrome

Notes: 1) Windows and Internet Explorer are registered trademarks or trademarks of Microsoft Corporation in the United States and other countries.
　　　Google Chrome and Android are registered trademarks of Google Inc.
　　　Safari and OS X are trademarks or registered trademarks of Apple Inc. in the United States.
　　　iOS is a trademark or registered trademark of Cisco Systems, Inc. in the United States and other countries.
　　　Firefox is a registered trademark of Mozilla Foundation in the United States and other countries.
　　　Opera is a trademark or registered trademark of Opera Software ASA.
　　2) Please use the latest OS and browser versions.
　　　Latest browser versions may not work with older models.

Firmware can be updated to latest version!

Update tool for latest firmware version is available on our website. Web server function can be added to CPU units listed above with built-in Ethernet function.

Expansion units

AFP7EXPM
AFP7EXPS
End unit (attached to the AFP7EXPS)

Connect a maximum of 3 blocks and a total of 64 units

Three blocks can be expanded on one CPU unit.

Total **64** units

Max. **3** blocks

Expansion master unit
CPU unit
Previous — Maximum of 16 units for each unit
Expansion cable
Expansion slave units
Max. 16 units
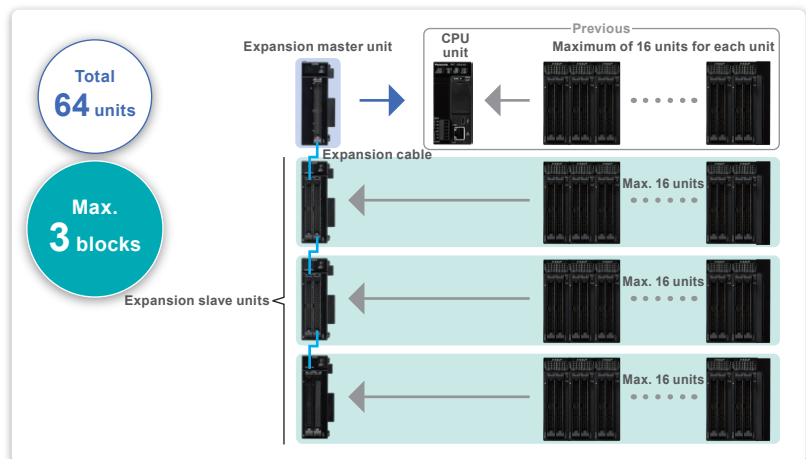

■ Specifications

Item	Product name	Expansion master unit	Expansion slave unit
	Part No.	**AFP7EXPM**	**AFP7EXPS**
Number of expansion	Block	Max. 3 blocks (total 4 blocks)	
	Unit	Max. 48 units (total 64 units)	
Transmission distance	Distance between blocks	Length of expansion cable (0.5 m 1.640 ft, 1 m 3.281 ft, 3 m 9.843 ft and 10 m 32.808 ft)	
	Total extension	Max. 30 m 98.425 ft (Expansion cable × 3 expansions) (Note 1)	
Current consumption (Note 2)		120 mA or less	100 mA or less
Max. allowable current		–	3.0 A (at 24 V DC power supply terminal)
Expansion bus connector		MIL 40 pins	MIL 40 pins × 2
Accessories		–	Power supply cable (Part No.: **AFPG805**) End unit (Part No.: **AFP7END**)

Notes: 1) Can support a maximum of 100 m 328 ft length between blocks. Please inquire with us for details.
　　2) Differs depending on power supply voltage and number of expansion units.
　　3) You cannot use the expansion units with the **AFP7CPS21** CPU unit.

Add-on cassettes (communication cassettes)

AFP7CCM2 AFP7CCS1M1 AFP7CCET1

AFP7CCS1 AFP7CCS2 AFP7CCM1

For communication with programmable displays or PCs and for data exchange between PLCs

1. Serial communication and Ethernet communication can be added to the CPU unit.

6 types are available including cassettes that support any combination of RS-232C, RS-422, RS-485 and Ethernet.

[Configuration example]

RS-232C
RS-422
RS-485
Ethernet

Ethernet

* Ethernet function (including FTP server / client function, HTTP client function, Web server function and E-mail sending function) cannot be used in the **AFP7CCET1**.
2. Protocol supports MODBUS-RTU.

Communication can easily be accomplished using comfortable communication instructions.
* The **AFP7CCET1** supports MODBUS-RTU as well, and does not support MODBUS-TCP.

■Specifications

Item	AFP7CCS1	AFP7CCS2 (Note 7)	AFP7CCM1 (Note 6)	AFP7CCM2 (Note 6)	AFP7CCS1M1	
Interface	RS-232C 1 channel	RS-232C 2 channels	RS-422 or RS-485 1 channel	RS-422 or RS-485 2 channels	RS-232C 1 channel and RS-485 1 channel	
Transmission distance	Max. 15 m 49.213 ft (Note 2)		Max. 1,200 m 3,937 ft at RS485 mode (Note 3 and 4) Max. 400 m 1,312 ft at RS422 mode (Note 3 and 4)		Max. 15 m 49.213 ft (RS232C) (Note 2)	Max. 1,200 m 3,937 ft (RS485) (Note 3 and 4)
Transmission speed	300, 600, 1200, 2400, 4800, 9600, 19200, 38400, 57600, 115200, 230400 bits/sec.					
Communication method	Half-duplex					
Synchronous method	Start-stop synchronization					
Transmission format	Stop bit: 1 bit / 2 bits					
	Parity: none / odd / even					
	Data length: 7 bits / 8 bits					
	Start code: with STX / without STX					
	End code: CR / CR + LF / none / ETX					
Data transmission order	Transmit from bit 0 in character units.					
Max. number of stations (Note 2, 3 and 4)	–	–	For program controlled communication: max. 99 (Note 8)		–	For program controlled communication: max. 99
			For computer link: max. 99 (Note 8)			For computer link: max. 99
			For PLC link: max. 16 (Note 8)			For PLC link: max. 16
			For MODBUS-RTU: max. 99 (Note 8)			For MODBUS-RTU: max. 99

Notes: 1) When connecting a commercially available device that has an RS-485 / RS-422 interface, please confirm operation using the actual device.
In some cases, the number of station units, transmission distance and communication speed vary depending on the connected device.
2) Cable length should be no longer than 3 m 9.843 ft if communicating at a rate of 38.4 kbits/sec. or higher.
If you are using RS-232C wiring, shielded cable should be used to improve noise immunity.
3) For RS-485 setting, the values for transmission distance, transmission speed and number of connected units should be within the values noted in the graph below.

Maximum number of stations in RS-485 communications

Baud rate: 230.4 kbps   Baud rate: 115.2 kbps

Baud rate: 57.6 kbps

Number of stations: 99, 70, 40, 20

Transmission distance: 0   200 (656)   700 (2,297)   1,000 (3,281)   1,200 (3,937) (m ft)

When using a transmission speed of 38.4 kbits/sec. or less, you can set up a maximum of 1,200 m 3,937 ft and 99 units.
For RS-422 setting, you can set up a maximum transmission distance of 400 m 1,312 ft.

4) If mixed C-NET adapters are used, up to 32 units can be connected, but transmission speed will be limited to a maximum of 19.2 kbits/sec..
5) The converter SI-35 manufactured by LINE EYE Co., Ltd. is recommendable for the RS-485 at the computer side.
When you use the SI-35, please adjust time after **FP7** series PLC receives a command until it returns a response by a program.
6) RS-422 or RS-485 can be selected using the DIP switch built into the communication cassette.
7) Using the DIP switch built into the communication cassette allows the interface to be used as RS-232C 5-wire system × 1 channel.
8) 1:1 for RS-422 interface

Item	AFP7CCET1
Interface	Ethernet 100BASE-TX / 10BASE-TX
Communication speed	100 Mbps, 10 Mbps Auto negotiation function
Total cable length	100 m 328 ft (500 m 1,640 ft when a repeater is used)
Number of nodes	254 units
Number of simultaneous connections	Max. 4 connections (User connection: 3, System connection: 1)
Communication protocol (Communication layer)	TCP / IP, UDP
DHCP	Automatic IP address acquisition
General-purpose communication	4 kB / 1 connection
Dedicated communication	Slave communication (MEWTOCOL-COM, MEWTOCOL7-COM, MEWTOCOL-DAT)
	Master communication (MEWTOCOL-COM, MEWTOCOL7-COM, MEWTOCOL-DAT)

Notes: 1) Please connect the Ethernet cable with the power turned off.
2) You cannot use this cassette "**AFP7CCET1**" with the serial communication unit.
3) Ethernet function (including FTP server / client function, HTTP client function, Web server function and E-mail sending function) cannot be used.

Add-on cassettes (function cassettes)

AFP7FCAD2
AFP7FCA21
AFP7FCTC2

Add Analog I/O, temperature input function

1. Analog I/O and temperature input functions can be added to the CPU unit.

Low cost expansion of the CPU unit with an analog function is easy and installation space can be reduced.

Analog cassette
- Analog input (2 channels)
- Analog input and output (input: 2 channels, output: 1 channel)
- Thermocouple (2 channels)

2. Low cost addition of functions

Reduced cost and space are realized compared to the analog input and output unit.

Analog input cassette / Analog input and output cassette
■Input specifications (AFP7FCAD2 / AFP7FCA21)

	Item		AFP7FCAD2 / AFP7FCA21
Input specifications	Number of input points		2 channels (non-insulated between channels)
	Input range	Voltage	0 to 10 V / 0 to 5 V *Switch setting (individual settings possible)
		Current	0 to 20 mA
	Digital conversion value		K0 to K4000
	Resolution		1/4000 (12 bits)
	Conversion speed		1 ms/channel
	Overall precision		±1 % F.S. or less (0 to +55 ºC +32 to +131 ºF)
	Input impedance	Voltage	1 MΩ
		Current	250 Ω
	Absolute maximum input	Voltage	−0.5 V, +15 V
		Current	30 mA
	Insulation method		• Between analog input terminal and internal digital circuit: transformer insulation, isolation IC insulation • Between analog input terminal and analog output terminal: transformer insulation, isolation IC insulation
	Connection method		Connector type terminal block

Note: Input specifications of the analog I/O cassette and analog input cassette are the same.

Thermocouple cassette
■Specifications (AFP7FCTC2)

	Item	AFP7FCTC2
Number of input points		2 channels (insulated between channels)
Input range (Note)	K type thermocouple	−50.0 to 500.0 ºC −58.0 to 932.0 ºF
	J type thermocouple	−50.0 to 500.0 ºC −58.0 to 932.0 ºF
Digital conversion value	Normal time	K−500 to K5000
	When range over	K−501, K5001 or K8000
	When the thermocouple broken	K8000
	When data preparation	K8001
Resolution		0.2 ºC (Display is 0.1 ºC with the software averaging process.)
Sampling cycle		100 ms / 2 channels
Overall precision		±0.5 % F.S. or less and cold contact accuracy: 1.5 ºC (0 to +55 ºC +32 to +131 ºF)
Input impedance		344 kΩ
Insulation method		• Between thermocouple input terminal and internal digital circuit: transformer insulation, isolation IC insulation • Between thermocouples: transformer insulation, isolation IC insulation
Connection method		Connector type terminal block

Note: Thermocouple setting can be switched with the switch on the front of the cassette.

Analog input and output cassette
■Output specifications (AFP7FCA21)

	Item		AFP7FCA21
Output specifications	Number of output points		1 channel
	Output range	Voltage	0 to 10 V / 0 to 5 V *Switch setting
		Current	0 to 20 mA
	Digital conversion value		K0 to K4000
	Resolution		1/4000 (12 bits)
	Conversion speed		1 ms/channel
	Overall precision		±1 % F.S. or less (0 to +55 ºC +32 to +131 ºF)
	Output impedance		0.5 Ω (voltage output)
	Max. output current		10 mA (voltage output)
	Absolute output load resistance		600 Ω or less (current output)
	Insulation method		• Between analog input terminal and internal digital circuit: transformer insulation, isolation IC insulation • Between analog input terminal and analog output terminal: transformer insulation, isolation IC insulation
	Connection method		Connector type terminal block

Note: There is no analog output functionality in the analog input cassette.

# Digital input and output units

AFP7X16DW AFP7X32D2 AFP7Y64P AFP7XY64D2P

* Photograph shows typical models for each shape.

I/O points can be added as necessary.

1. Input/output mixed units are available.

The necessary I/O points can be efficiently obtained, resulting in a compact PLC at reduced cost.

2. The 64 points transistor output unit is designed for 300 mA current capacity.

The 64 points transistor output unit is equipped with 8 contact points with 300 mA current capacity. Large indicator lamps, magnetic contacts, etc. can be driven directly.

Relay Indicating lamp   Direct drive   **Reduced space and cost**

3. The noise countermeasure is possible by an adjustment of the input time constants.

Response time can be selected from 0.1 ms, 0.5 ms, 1 ms, 5 ms, 10 ms, 20 ms or 70 ms, depending on the output equipment to be used.

ON   OFF   **Malfunction!** Adjust the time constant   **Reduced malfunction**

■Input specifications

Item	DC input units			I/O mixed unit (input side)	
	16 points type	32 points type	64 points type	DC input / sink type	DC input / source type
Insulation method	Photocoupler				
Rated input voltage	12 to 24 V DC	24 V DC		24 V DC	
Rated input current	6 mA approx. (at 24 V)	2.7 mA		2.7 mA	3.4 mA
Impedance	3.6 kΩ	8.2 kΩ		8.2 kΩ	7.5 kΩ
Min. ON voltage / min. ON current	9.6 V / 2 mA	19.2 V / 2.5 mA		19.2 V / 2.5 mA	
Max. OFF voltage / max. OFF current	2.5 V / 1 mA	5 V / 1.5 mA		5 V / 1.5 mA	
Response time OFF→ON	0.1 ms or less (Note)	0.2 ms or less (Note)		0.2 ms or less (Note)	
Response time ON→OFF	0.2 ms or less (Note)	0.2 ms or less (Note)		0.2 ms or less (Note)

# Analog input and output units

AFP7DA4H
AFP7AD4H
AFP7AD8

Channel insulation is switchable to support various devices

1. 20 times faster conversion than in previous model: 25 µs/channel

2. High-speed sampling that doesn't depend on CPU unit scanning

Sampling and data collection in the analog unit!
Use the measurement applications because with the fixed cycle, analog signal can be held in the buffer.
Dependent on scan of CPU unit

The scan gets delayed when the CPU unit slows down due to other processes and sampling becomes sporadic.
Occurrence of failure

Sampling in the analog unit

Accurate sampling possible with fixed cycle.

3. High-accuracy of ±0.05 % F.S. (at +25 °C +77 °F) can be achieved.

4. Noise-resistant with isolated channels

■Analog input specifications (AFP7AD4H / AFP7AD8)

Item	Part No.	AFP7AD4H	AFP7AD8
	Number of channels	4 channels	8 channels
Input range / Resolution, Max. 16 bits	Voltage (Note 1)	-10 to +10 V (resolution: 1/62,500) 0 to 10 V (resolution: 1/31,250) 0 to 5 V (resolution: 1/31,250) 1 to 5 V (resolution: 1/25,000) (Note 2)	
	Current	0 to 20 mA (resolution: 1/31,250) 4 to 20 mA (resolution: 1/25,000) (Note 2)	
Conversion speed	Voltage / current	25 µs/channel (at non-insulated channels) 5 ms/channel (at insulated channels)	25 µs/channel (at non-insulated channels)
Overall accuracy		±0.05 % F.S. or less (at +25 °C +77 °F) ±0.1 % F.S. or less (at 0 to +55 °C +32 to +131 °F)	±0.1 % F.S. or less (at +25 °C +77 °F) ±0.3 % F.S. or less (at 0 to +55 °C +32 to +131 °F)
Input impedance	Voltage input / Current input	1 MΩ approx. / 250 Ω	
Max. input range		-15 to +15 V voltage input -2 to +30 mA current input	
Insulation method	Between input terminals and internal circuit	Photocoupler and isolated DC / DC converter	
	Between channels	PhotoMOS relay	
Digital processing	Averaging / Number of times	Setting range: 2 to 60,000 times	
	Averaging / Time duration	Time setting range: 1 to 1,500 ms (at non-insulated channels), 200 to 60,000 ms (at insulated channels)	Time setting range: 1 to 1,500 ms (at non-insulated channels)
	Averaging / Moving	Range setting: 2 to 2,000 times	
	Scale conversion setting	Any value within ±30,000	
	Offset setting	Any value within ±3,000	
	Gain setting	Any value within 9,000 to 11,000	
Input range change method		Selectable per channel	
Conversion execution / non-execution channel setting		Selectable per channel unit	
Max. and min. value holding		Possible to make settings on a channel-by-channel basis	
Comparison of upper and lower limit values		Possible to make settings on a channel-by-channel basis (hysteresis)	
Broken wire detection		When less than 0.7 V / 2.8 mA (only when voltage input range 1 to 5 V or current input range 4 to 20 mA is set.)	When less than 2.8 mA (only when current input range 4 to 20 mA is set.)
Buffer function		3 trigger types: Soft trigger, External trigger and Input level	

Notes: 1) Please note that the digital converted value corresponding to about 2 V of analog input is stored in the input relay area (WX) for channels which are not connected to input when setting the voltage range with **AFP7AD8**.
2) The full scale (F.S.) on the accuracy of an analog voltage input range from 1 to 5 V and that of an analog current input range from 4 to 20 mA are 0 to 5 V and 0 to 20 mA, respectively.

Item	Part No.	AFP7AD4H	AFP7AD8
	Number of channels	4 channels	8 channels
Trigger input section	Insulation method	Photocoupler	
	Rated input voltage / Rated input current	24 V DC / 4.5 mA approx. (at 24 V DC)	24 V DC / 12 mA approx. (at 24 V DC)
	Input impedance	5.1 kΩ approx.	2 kΩ approx.
	Operating voltage range	21.6 to 26.4 V DC	
	Min. ON voltage / Min. ON current	19.2 V / 3.5 mA	
	Max. OFF voltage / Max. OFF current	5 V / 1.5 mA	
	Response time OFF→ON	0.2 ms or less	0.1 ms or less
	Response time ON→OFF	0.2 ms or less	0.1 ms or less
	Input points per common	2 points/common	1 point/common
Connection method		Terminal block (M3 terminal screw)

	Current	0 to 20 mA (resolution: 1/31,250) 4 to 20 mA (resolution: 1/25,000)
Conversion speed	Voltage / current	25 µs/channel
Overall accuracy		± 0.1 % F.S. or less (at +25 °C +77 °F) ± 0.3 % F.S. or less (at 0 to +55 °C +32 to +131 °F)
Output impedance (voltage output)		0.5 Ω or less
Max. output current (voltage output)		10 mA
Permissible output load resistance (Current output)		500 Ω or less
Insulation method	Between the input terminals and internal circuit	Photocoupler and isolated DC / DC converter
	Between channels	Not insulated
Scale conversion setting		Any value within ±30,000
Offset and gain function	Offset setting	Any value within ±3,000
	Gain setting	Any value within 9,000 to 11,000
Output range change method		Selectable per channel
Conversion execution / non-execution channel setting		Selectable per channel unit
Upper and lower output limit clip function		Possible to make settings on a channel-by-channel basis
Analog output holding (in PROG mode)		Present value/any value/not holding
Connection method		Terminal block (M3 terminal screws)

Temperature input units

High-speed, high-accuracy and multi-channel input

AFP7TC8

AFP7RTD8

1. Easy to perform high-accuracy measurement

Equipped with a variety of functions required for temperature measurement
Easy to obtain measurement results

Averaging processing	Number of times, time, moving
Insulation	Channels are insulated from one another and from the internal circuit.
Simple setting	Initial settings can be completed on the configuration screen.

2. Capable of high-speed and high-accuracy temperature input

	High-speed conversion	High-accuracy
Thermocouple multiple analog input unit	5 ms/channel (high-speed mode) 25 ms/channel (normal mode)	±0.1 % F.S. (at +25 °C +77 °F) ±0.3 % F.S. (at 0 to +55 °C +32 to +131 °F)
Resistance temperature detector input unit	25 ms/channel (normal mode)	

3. Multi-channel input

One unit can control the input of up to 8 channels.
With so many channels, the unit eliminates the need to purchase additional units, reducing required space and costs.
The thermocouple multiple analog input unit can also control voltage and current inputs.

← Thermocouple
← Voltage   **Max. 8 channels**
← Current

Thermocouple multiple analog input unit

← Resistance temperature detector   **Max. 8 channels**

Resistance temperature detector input unit

■Specifications

Item \ Product name	Part No.	Thermocouple multiple analog input unit AFP7TC8
Number of channels		8 channels
Input range (resolution)	Thermocouple (resolution: 0.1 °C)	K1: -100.0 to 600.0 ºC / K2: -200.0 to 1000.0 ºC
		J1: -100.0 to 400.0 ºC / J2: -200.0 to 750.0 ºC
		T: -270.0 to 400.0 ºC / N: -270.0 to 1300.0 ºC
		R: 0.0 to 1760.0 ºC / S: 0.0 to 1760.0 ºC
		B: 0.0 to 1820.0 ºC / E: -270.0 to 1000.0 ºC
		PLⅡ: 0.0 to 1390.0 ºC / WRe5-26: 0.0 to 2315.0 ºC
	Voltage	-10 to 10 V DC (resolution: 1/62,500) 0 to 5 V DC (resolution: 1/31,250) 1 to 5 V DC (resolution: 1/25,000) (Note 1) -100 to 100 mV DC (resolution: 1/62,500) Resolution: max. 16 bits
	Current	0 to 20 mA (resolution: 1/31,250) 4 to 20 mA (resolution: 1/25,000) (Note 1) Resolution: max. 16 bits
Conversion speed		5 ms/channel + 5 ms (Note 2) 25 ms/channel + 25 ms Add the drift compensation measuring time to the number of measuring channels.
Overall accuracy		±0.1 % F.S. or less (at +25 °C +77 ºF) ±0.3 % F.S. or less (at 0 to +55 °C +32 to +131 ºF)
Reference contact compensation accuracy		±1.0 °C (with thermocouple input)
Input impedance	Voltage / current	1 MΩ / 250 Ω
Insulation method	Between input terminals and internal circuit	Photocoupler and isolated DC / DC converter
	Between channels	PhotoMOS relay
Conversion execution / non-execution channel setting		Selectable per channel unit
Input range change method		Selectable per channel
Digital processing	Averaging	Number of times, time, moving
	Scale conversion setting	Any value within ±30,000 (Voltage and current range only)
	Offset setting	Any value within ±3,000
	Gain setting	±10 %
Comparison of upper and lower limit values		Possible to make settings on a channel-by-channel basis.
Max. and min. value holding		Possible to make settings on a channel-by-channel basis.
Broken wire detection		Available
Connection method		Connector type terminal block

Item \ Product name	Part No.	Resistance temperature detector input unit AFP7RTD8
Number of channels		8 channels
Input range (resolution)	Resistance temperature detector (resolution: 0.1 °C)	Pt100 (1): -100.0 to 200.0 ºC Pt100 (2): -200.0 to 650.0 ºC JPt100(1): -100.0 to 200.0 ºC JPt100(2): -200.0 to 650.0 ºC Pt1000: -100.0 to 100.0 ºC
Conversion speed		25 ms/channel + 25 ms Add the drift compensation measuring time to the number of measuring channels.
Overall accuracy		±0.1 % F.S. or less (at +25 °C +77 ºF) ±0.3 % F.S. or less (at 0 to +55 °C +32 to +131 ºF)
Allowable signal source resistance		R.T.D. input: 30 Ω (three wires balanced)
Insulation method	Between input terminals and internal circuit	Photocoupler and isolated DC / DC converter
	Between channels	PhotoMOS relay
Conversion execution / non-execution channel setting		Selectable per channel unit
Input range change method		Selectable per channel
Digital processing	Averaging	Number of times, time, moving
	Offset setting	Any value within ±3,000
	Gain setting	±10 %
Comparison of upper and lower limit values		Possible to make settings on a channel-by-channel basis.
Max. and min. value holding		Possible to make settings on a channel-by-channel basis.
Broken wire detection		Available
Connection method		Connector type terminal block

Notes: 1) The full scale (F.S.) ranges of accuracy are 1 to 5 V DC for voltage and 0 to 20 mA for current input, respectively.
2) The AC noise removal is disabled.

High-speed counter units

One of the fastest in industry added in lineup

1. Industry-leading class speed of 16 Mpps (for differential input and 2-phase, 4-multiple)

Accurate, real-time surveillance of inverter and motor rotation speed variation.

2. Supports 5 / 12 / 24 V DC and differential input.

Supports wide range of interface from 12 to 24 V DC, 5 V DC and differential input with one unit.

3. Powerful application support

Input pulse string frequency (period) can be measured inside the unit with built in periodical pulse counter function. Built-in ring counter function can easily detect index table position. Line speed adjustment and work length measurement are available with built-in clock that allows accurate time measurement.

4. Various functions can be used without a ladder program

Capture function of count value	Finite difference calculation of capture value	Interrupt using comparison match
Comparison match and band comparison	Measurement of frequency and number of revolution	Reset of Z number and preset
Reset and preset of external signal	Built-in clock selection	

AFP7HSC2T   **AFP7HSC4T**

■Specifications

Item		Type	2 channels type	4 channels type
		Part No.	**AFP7HSC2T**	**AFP7HSC4T**
Input	Insulation method		Photocoupler	
	Rated input voltage		12 to 24 V DC / 3.5 to 5 V DC	
	Input impedance	24 V DC / 5 V DC	3.0 kΩ approx. / 390 Ω approx.	
	Usage voltage range	24 V DC / 5 V DC	10.8 to 26.4 V DC / 3.5 to 5.25 V DC	
	Min. ON voltage / Min. ON current	24 V DC	10 V DC / 4 mA	
		5 V DC	3.0 V DC / 4 mA	
	Min. OFF voltage / Min. OFF current	24 V DC	2.0 V DC / 2 mA	
		5 V DC	1.0 V DC / 0.5 mA	
	Input time constant setting		None, 0.1 µs, 0.2 µs, 0.5 µs, 1.0 µs, 2.0 µs and 10.0 µs	
Count function	Number of counters		2 channels	4 channels
	Counter type		Linear counter / Ring counter	
	Counting range		Signed 32-bit (-2,147,483,648 to +2,147,483,647)	
	Max. input frequency		4 MHz / 8 MHz for individual input (phases A and B) (Duty ratio 50 ±10 %) 4 MHz / 8 MHz for direction discrimination input (Duty ratio 50 ±10 %) 4 MHz / 8 MHz /16 MHz for 2-phase input (Duty ratio 50 ±10 %, Phase shifting below 5 %)	
	Input signal		Phases A, B and Z	
	External I/O		Control signal input: 4 points (2 points/ch) External output: 4 points (2 points/ch)	Control signal input: 8 points (2 points/ch) External output: 8 points (2 points/ch)
	Counter input type		Individual input: 1 multiple, 2-multiple Direction discrimination input: 1 multiple, 2-multiple 2-phase input: 1 multiple, 2-multiple, 4-multiple	
Measurement function	Frequency measurement function		Measures the intervals between the variations of count values, and calculates the frequency.	
Comparison function	Target value match function		Depending on the count direction, sets or resets the output when the counter value reaches the target value.	
External output	Comparison result output function		Outputs the result of comparison function.	
Other functions	Capture function		Acquires the current count value from the edges of input signals, and stores it in the capture 0 register or capture 1 register. The value of the specified capture register will be overwritten by a new value and the old value will be discarded every time a counter value is captured.	
	Interrupt input function		Available (2 points/ch, Max. 8 points/unit) (Note 1, 2)	

Notes: 1) The interrupt input function can be used for 8 points per unit and for a maximum of 8 units (max. 64 points) in the whole system. However, the entire scan time slows down as more interrupt programs are used. Minimize the use of interrupt programs.
2) The priority order for interrupt inputs is as follows; In a unit, from the smallest interrupt bit. In the whole system, from the smallest unit number.
Positioning units

Combined multi-axle control can be achieved at reduced cost.

AFP7PP02T **AFP7PP04T** **AFP7PP02L** **AFP7PP04L**

1. Equipped with electronic cam and electronic gear functions
Ladder program is capable of controlling electronic cams and gears. Virtual axes are supported and operable without connecting to external encoders.

2. Organized wiring to servo amplifier
A servo ON output terminal is provided that allows simple and neat wiring to the servo amplifier. Also, wiring from the I/O unit is unnecessary, and a test run is possible by only a positioning soft tool.

Reduced space and cost
Reduced debugging time

CPU unit, I/O units and positioning unit

CPU unit and positioning unit

Servo ON

Servo ON

3. Dedicated configuration tool
Start positioning dedicated configuration tool using **Control FPWIN GR7**. Parameter and positioning operation settings can be made easily.
Test operation is also supported. Positioning operations can be checked even-while the CPU unit is in program mode.

■Performance specifications

Item			Specifications	
		2 axes type		4 axes type
Part No.		AFP7PP02T	AFP7PP02L	AFP7PP04T	AFP7PP04L

Item		Specifications			
		2 axes type		4 axes type	
Part No.		AFP7PP02T	AFP7PP02L	AFP7PP04T	AFP7PP04L
Output type		Transistor	Line driver	Transistor	Line driver
Max. operation speed		500 kpps	4 Mpps	500 kpps	4 Mpps
Number of axes controlled		2 axes		4 axes	
Interpolation control		2 axes linear interpolation, 2 axes circular interpolation		2 axes linear interpolation, 3 axes linear interpolation, 2 axes circular interpolation, 3 axes spiral interpolation	
Position command units		pulse µm (The minimum command unit can be selected from 0.1 µm or 1 µm.) inch (The minimum command unit can be selected from 0.00001 inch or 0.0001 inch.) degree (The minimum command unit can be selected from 0.1 degree or 1 degree.)			
Position command range		pulse: −1,073,741,823 to +1,073,741,823 pulse µm (0.1 µm): −107,374,182.3 to +107,374,182.3 µm µm (1 µm): −1,073,741,823 to +1,073,741,823 µm inch (0.00001 inch): −10,737.41823 to +10,737.41823 inch inch (0.0001 inch): −107,374.1823 to +107,374.1823 inch degree (0.1 degree): −107,374,182.3 to +107,374,182.3 degree degree (1 degree): −1,073,741,823 to +1,073,741,823 degree			
Speed command range		pulse: 1 to 32,767,000 pps µm: 1 to 32,767,000 µm/sec. inch: 0.001 to 32,767.000 inch/sec. degree: 0.001 to 32,767.000 rev/sec. *Specify an output speed that is below the maximum operating speed.			

Automatic operation / Position control

Position command method		Absolute (Absolute position designation), Increment (Relative position designation)	
Acceleration / deceleration method		Linear acceleration / deceleration, S-curve acceleration / deceleration	
Acceleration time		0 to 10,000 ms (in increments of 1 ms)	
Deceleration time		0 to 10,000 ms (in increments of 1 ms)	
Number of positioning tables per axis		Standard area: 600 points, expansion area: 25 points	
Control method	Independent	PTP control (E point control, C point control), CP control (P point control), Speed control (J point control)	
	2-axis interpolation	Linear	E point, P point and C point controls: Specify synthesis speed or major axis speed
		Circular	E point, P point and C point controls: center point or passing point
	3-axis interpolation	Linear	E point, P point and C point controls: Specify synthesis speed or major axis speed
		Spiral	E point, P point and C point controls: center point or passing point
Startup time		Standard area: 3 ms or less, expansion area: 5 ms or less	
Other function	Dwell time	0 to 32,767 ms (in increments of 1 ms)	

Manual operation

JOG operation	Acceleration / deceleration method	Linear acceleration / deceleration, S-curve acceleration / deceleration	
	Acceleration / deceleration time	0 to 10,000 ms (in increments of 1 ms)	
Home return	Acceleration / deceleration method	Linear acceleration / deceleration	
	Acceleration / deceleration time	0 to 10,000 ms (in increments of 1 ms)	
	Return methods	7 methods: DOG method (3 types), Limit method (2 types), Data set method, Z-phase method	
Pulser operation	Speed command range	Operates in synchronization with pulser input	

Stop function

Deceleration stop	Deceleration time	Deceleration time of running operation
Emergency stop	Deceleration time	0 to 10,000 ms (in increments of 1 ms)
Limit stop	Deceleration time	0 to 10,000 ms (in increments of 1 ms)
Error stop	Deceleration time	0 to 10,000 ms (in increments of 1 ms)
System stop	Deceleration time	Immediate stop (0 ms), all axes stop

Synchronous operation function

Synchronous basic setting	Master axis	Existing axes, virtual axes or pulse input (1 to 4)	
	Slave axis	Max. 2 axes	Max. 4 axes
Electronic gear function	Operation setting	Gear ratio setting	
	Operation method	Direct method, Acceleration / deceleration method	
Electronic clutch function	Clutch ON trigger	Contact input	
	Clutch method	Direct method, Linear slip method	
Electronic cam function	Cam curve	Select from 20 types Multiple curves can be specified within a phase (0 to 100%).	
	Resolution	1024, 2048, 4096, 8192, 16384, 32768	
	Number of cam patterns	4 to 16 (Depends on resolution)	

Other specifications

Output mode		1 pulse output (pulse + direction), 2 pulse outputs (CW / CCW)
High-speed counter function (Note)	Countable range	−1,073,741,823 to +1,073,741,823 pulse
	Input mode	Phase difference input, Direction distinction input, Individual input (transfer multiple available for each)
Built-in servo ON output		

Note: Pulser input and high-speed counter functions cannot be used simultaneously, as the same pulse input terminal is used.

Pulse output units

AFP7PG02T   AFP7PG04T   AFP7PG02L   AFP7PG04L

Super high-speed positioning control achieved
1. High-speed startup

The pulse output request is received from the CPU unit and the startup speed up to output of the pulse is supper high-speed of 1 μs. Tact time is reduced with repeat of short-distance positioning operations, etc.

Start time: 1 μs

Pulse output unit   **Index table**
2. Neater wiring to servo and amplifier

Equipped with a servo ON output terminal, wiring to the servo amplifier is neater.

3. Replacement from FP2 series is easy

Usage is same as the previous **FP2** positioning unit (multi-function type). Program transfer is easy.

■Performance specifications

Item		AFP7PG02T	AFP7PG04T	AFP7PG02L	AFP7PG04L
Output type		Transistor		Line driver	
Occupied points		Each 32 points of I/O	Each 64 points of I/O	Each 32 points of I/O	Each 64 points of I/O
Number of axes controlled		2 axes, independent	4 axes, independent	2 axes, independent	4 axes, independent
Position command	Command units	Pulse (The program specifies whether increment or absolute is used.)			
	Max. pulse count	Signed 32 bits (+2,147,483,647 to -2,147,483,648 pulses)			
Speed command	Command range	1 pps to 500 kpps (can set in 1 pps)		1 pps to 4 Mpps (can set in 1 pps)	
Acceleration/ deceleration command	Acceleration/deceleration	Linear acceleration / deceleration, S acceleration / deceleration			
	"S" Acceleration/deceleration	Can select from sin curve, secondary curve, cycloid curve and third curve.			
	Acceleration/deceleration time	0 to 32,767 ms (can set in 1 ms)			
Home return	Home return speed	Speed setting possible (changes return speed and search speed)			
	Input signal	Home input, near home input, limit input (+), limit input (−)			
	Output signal	Deviation counter clear signal			
Operation mode		E point control (linear and S acceleration/decelerations) P point control (linear and S acceleration/decelerations) Home return operation (home search) JOG operation [Note 1] JOG positioning operation Pulser input function [Note 2] transfer multiplication ratio (× 1, × 2, × 5, × 10, × 50, × 100, × 500, × 1000) Real-time frequency change Infinity output			
Startup time		0.02 ms, 0.005 ms or 0.001 ms selecting possible [Note 3]			
Output interface	Output mode	1 pulse output (pulse and sign), 2 pulse output (CW and CCW)			
High-speed counter function [Note 2]	Countable range	Signed 32 bits (+2,147,483,647 to -2,147,483,648 pulse)			
	Input mode	Two-phase input, direction distinction input, individual input (with multiplier function mode)			
Other functions		Startup using I/O contact Built-in limit (+) and limit (−) With servo ON output			
External power supply	Voltage	21.6 to 26.4 V DC			
	Current	50 mA (at 24 V)	90 mA (at 24 V)	50 mA (at 24 V)	90 mA (at 24 V)

Notes: 1) When linear acceleration/deceleration operation is selected, it is possible to change the target speed during operation.
2) Since the pulsar input function and the high-speed counter function use the same pulse input terminal, both functions cannot be used at the same time.
3) Startup time can be changed using the common memory control code setting. The factory (default) setting is 0.02 ms. Startup time is defined as the time between startup and output of the first pulse.

Motion control units EtherCAT® type*

*EtherCAT is registered trademark and patented technology, licensed by Beckhoff Automation Gmbh, Germany.

AFP7MC16EC
AFP7MC32EC
AFP7MC64EC

Motion control of up to axes in one unit

A single FP7 motion control unit can control 64 axes of MINAS A6B / A5B and 32 virtual axes. It is now easier to perform multiple axial control.

Virtual axis **32 axes**
Real axis **64 axes**
Total 96 axes

EtherCAT
EtherCAT Communication
AC servo motors & driver
MINAS A6B

• Industry's fastest class with 0.5 ms* transmission cycle
• Control system: Cyclic position control
• Positioning table: 1,000 tables/axis

*4 axes (2-axis interpolation × 2 groups). Our company created send/receive allocation.

Item	Transmission cycle		
	16 axes	32 axes	64 axes
Independent axis control Interpolation control Synchronous control	1ms	2ms	4ms

*The transmission cycle has changed from firmware Ver. 1.2.

■Specifications

Item	16 axes type	32 axes type	64 axes type
Connected slave (Note 1, 2, 3)	Panasonic AC servo motor MINAS A6B / A5B series EtherCAT-compatible communication unit for digital sensor SC-GU3-03 EtherCAT-compatible S-LINK V gateway controller SL-VGU1-EC		
Number of control axes	Real axis: 16 axes Virtual axis: 8 axes	Real axis: 32 axes Virtual axis: 16 axes	Real axis: 64 axes Virtual axis: 32 axes
Communication cycle	0.5 ms / 1 ms / 2 ms / 4 ms		
Interpolation control	2-axis linear interpolation, 2-axis circular interpolation, 3-axis linear interpolation and 3-axis spiral interpolation		
Number of occupied I/O points	Input: 16 points, Output: 16 points		

Automatic operation — Positioning control (CSP)

Position specification method	Absolute (specified absolute position), Increment (specified relative position)	
Position specified unit	pulse μm (select a minimum instruction unit of 0.1 μm or 1 μm) inch (select a minimum instruction unit of 0.00001 inch or 0.0001 inch) degree (select a minimum instruction unit of 0.1 degree or 1 degree)	
Position reference range	pulse: −2,147,483,648 to 2,147,483,647 pulse μm (0.1 μm): −214,748,364.8 to 214,748,364.7 μm μm (1 μm): −2,147,483,648 to 2,147,483,647 μm inch (0.00001 inch): −21,474.83648 to 21,474.83647 inch inch (0.0001 inch): −214,748.3648 to 214,748.3647 inch degree (0.1 degree): −214,748,364.8 to 214,748,364.7 degree degree (1 degree): −2,147,483,648 to 2,147,483,647 degree	
Speed reference range	pulse: 1 to 2,147,483,647 pps μm: 1 to 2,147,483,647 μm/sec. inch: 0.001 to 2,147,483.647 inch/sec. degree: 0.001 to 2,147,483.647 rev/sec.	
Acceleration / deceleration type	Linear acceleration / deceleration, S-shaped acceleration / deceleration	
Acceleration / deceleration time	0 to 10,000 ms (adjustable in 1 ms increments)	
Number of positioning tables	Each axis standard area: 1,000 points expansion area 100 points (24 axes in case of using simultaneous startup)	

Control method

Independent		PTP control (E point control, C point control), CP control (P point control), Speed control (J point control)
2-axis interpolation	Linear interpolation	E point, P point and C point controls: Specify synthesis speed or major axis speed
	Circular interpolation	E point, P point and C point controls: Center point or passing point
3-axis interpolation	Linear interpolation	E point, P point and C point controls: Specify synthesis speed or major axis speed
	Spiral interpolation	E point, P point and C point controls: Center point or passing point
Other function	Dwell time	0 to 32,767 ms (adjustable in 1 ms increments)

Item	16 axes type	32 axes type	64 axes type

Manual operation

JOG / inching operation

Speed reference range	pulse: 1 to 2,147,483,647 pps μm: 1 to 2,147,483,647 μm/sec. inch: 0.001 to 2,147,483.647 inch/sec. degree: 0.001 to 2,147,483.647 rev/sec.
Acceleration / deceleration type	Linear acceleration / deceleration, S-shaped acceleration / deceleration
Acceleration / deceleration time	0 to 10,000 ms (adjustable in 1 ms increments)

Home return

Speed reference range	pulse: 1 to 2,147,483,647 pps μm: 1 to 2,147,483,647 μm/sec. inch: 0.001 to 2,147,483.647 inch/sec. degree: 0.001 to 2,147,483.647 rev/sec.
Acceleration / deceleration type	Linear acceleration / deceleration, S-shaped acceleration / deceleration
Acceleration / deceleration time	0 to 10,000 ms (adjustable in 1 ms increments)
Return methods	DOG method (4 types), Limit method (2 types), Data set method, Z phase method, Stop-on-contact method (2 types)

Stop function

Deceleration stop	Deceleration time	Axis operation mode startup time of activated axis
Emergency stop	Deceleration time	0 to 10,000 ms (adjustable in 1 ms increments)
Limit stop	Deceleration time	0 to 10,000 ms (adjustable in 1 ms increments)
Error stop	Deceleration time	0 to 10,000 ms (adjustable in 1 ms increments)
System stop	Deceleration time	Immediate stop (1 ms), all axes stop

Synchronous operation function

		16 axes type	32 axes type	64 axes type
Synchronous basic setting	Master axis	Selection possible of real axis and virtual axis		
	Slave axis	Virtual axis: Max. 8 axes/master	Virtual axis: Max. 16 axes/master	Virtual axis: Max. 32 axes/master
Electronic gear function	Operation setting	Gear ratio setting		
	Operation method	Direct method, Acceleration / deceleration method		
Electronic clutch function	Clutch ON trigger	Contact input		
	Clutch method	Direct method, Linear slide method		
Electronic cam function	Cam curve	Select from 20 types Multiple curves can be specified within a phase (0 to 100 %).		
	Resolution	1,024, 2,048, 4,096, 8,192, 16,384, 32,768		
	Number of cam patterns	16 to 64 (Depends on resolution)	32 to 128 (Depends on resolution)	64 to 256 (Depends on resolution)

Other specifications

Software limit function	Set range	pulse: −2,147,483,648 to 2,147,483,647 pulse μm (0.1 μm): −214,748,364.8 to 214,748,364.7 μm μm (1 μm): −2,147,483,648 to 2,147,483,647 μm inch (0.00001 inch): −21,474.83648 to 21,474.83647 inch inch (0.0001 inch): −214,748.3648 to 214,748.3647 inch degree (0.1 degree): −214,748,364.8 to 214,748,364.7 degree degree (1 degree): −2,147,483,648 to 2,147,483,647 degree
Monitor judgment	Torque judgment	Torque judgment Selection possible of active / non-active and error / warning 0.0 to ±500.0 %
	Actual speed judgment	Actual speed judgment Selection possible of active / non-active and error / warning 0.0 to ±5,000 rpm
Backup		Parameters and positioning data are saved to flash memory (battery free)

· Limit input CWL, CCWL monitor and proximity (DOG) monitor
· General-purpose input: 5 points, General-purpose output: 1 point (I/O from AMP)
· Auxiliary output contact and auxiliary output cord

Notes: 1) A6B and **SL-VGU1-EC** are compatible with the **FP7** motion control unit Ver.1.2 or later.
2) One unit or more A6B or A5B must exist on the network. Also, A6B and A5B can both be used on the network.
3) The hub for EtherCAT / Ethernet cannot be used.
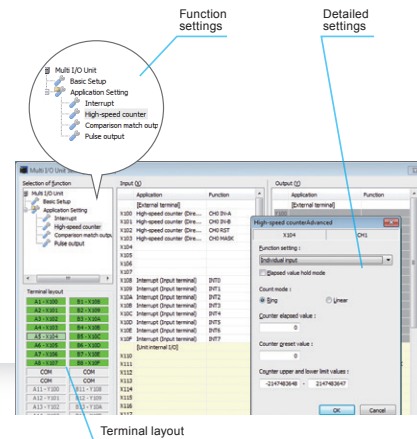

Multi input/output units

Multifunctional control achieved in one unit !

Accomplish highly functional control at the best price.

Highly functional control is possible using with best value model CPU unit **AFP7CPS21**.

Settings executed with FPWIN GR7

Unit settings easily performed using configuration screen.

■Function specifications (AFP7MXY32DWD / AFP7MXY32DWDH)

|	Item	AFP7MXY32DWD	AFP7MXY32DWDH
Basic input and output	Number of occupied I/O points	Input / Output: 64 points each (4 words)	Input / Output: 96 points each (6 words)
	Number of external I/O points	Input: 16 points, Output: 16 points	
	Input time constant setting	None, 0.5 μs, 1 μs, 2 μs, 4 μs, 8 μs, 16 μs, 32 μs, 64 μs, 96 μs, 128 μs, 256 μs, 2 ms, 4 ms or 8 ms Setting possible in 2-point units	
	Output polarity setting	No output, N channel, P channel, both channels (push pull output), and differential output Setting possible in 4-point units	
Interrupt	Number of points	8 points/unit (Max. of 8 units can be used with **FP7** system when setting interrupt mode.)	
	Mode	Non-interrupt unit, interrupt unit (Set using DIP switches)	
	Interrupt condition setting	Terminal input, Comparison match	
Counter	Counter type	Ring counter, Linear counter	
	Input mode	Direction discrimination, individual input, phase input	
	Number of channels	4 channels [Note 1]	
	Counting range	Signed 32-bit (-2,147,483,648 to +2,174,483,647) Setting possible of upper and lower limits	
	Max. countable speed	5 V input voltage: 500 kHz [Note 2] 12 V input voltage: 500 kHz (350 kHz with phase input) [Note 2] 24 V input voltage: 250 kHz (180 kHz with phase input) [Note 2]	
	Min. input pulse width	0.5 μs	
	Comparison output setting	Max. 8 points Terminal input counter: 4 channels	
	Others	Transfer multiplication function (× 1, × 2, × 4) Elapsed value offset / preset function Elapsed value hold function, setting of upper / lower count limits Input pulse frequency measurement Overflow / underflow detection	
Pulse output	Number of channels	4 channels	
	Output mode	Direction discrimination, individual input, phase input, comparison match stop	
	Output terminals — Pulse output function	2 terminals/channel (B11 to B18 terminals)	
	Output terminals — PWM output function	1 terminal/channel (B11, B13, B15 and B17 terminals)	
	Output frequency — Pulse output function	1 to 500 kHz [Note 3] (1 Hz increments)	
	Output frequency — PWM output function	1 to 100 kHz [Note 3] (1 Hz increments)	
	Duty — Pulse output function	50 % approx. (fixed)	
	Duty — PWM output function	0 to 100 % (Set in 0.1% increments)	
	Other functions	Pulse number measurement function (dedicated pulse counter 4 channels)	

Notes: 1) When using elapsed value hold function, number of channels will be limited.
2) With 50 % duty input pulse.
3) When push pull setting or output current is 0.1 A. Varies according to load.

■Positioning function specifications (AFP7MXY32DWDH)

	Item	AFP7MXY32DWDH
	Number of axes controlled	Max. 4 axes
Common specifications	Position setting mode	Increment, Absolute
	Output interface	Transistor open collector output, Push-pull, Line driver [Note 1]
	Pulse output method	Pulse + Sign, CW + CCW
	Max. output frequency	500 kHz
	Output pulse duty ratio	When using table setting mode: 50 % (fixed)
	Control unit	Pulse
Position control	Position setting range	-1,073,741,824 to +1,073,741,823 pulses
	Speed command range	Pulse : 1 to 500,000 Hz
	Max. operation speed	500 kHz
	Acceleration / deceleration method	Linear acceleration / deceleration
	Acceleration time	1 to 10,000 ms (Settable by 1 ms)
	Deceleration time	1 to 10,000 ms (Settable by 1 ms)
	Number of positioning tables	20 tables for each axis (Up to 2 tables can be executed consecutively.)
	Control method (Single axis)	PTP control (E point control, C point control), CP control (P point control), Speed control (J point control) [Note 2] [Note 3]
	Control method (2-axis linear interpolation)	E point, P point, C point controls, Composite speed or Long axis speed setting
	Dwell time	0 to 32,767 ms (Settable by 1 ms)
JOG operation	Speed command range	Pulse: 1 to 500,000Hz (Note 3)
	Acceleration / deceleration method	Linear acceleration / deceleration
	Acceleration time	1 to 10,000 ms (Settable by 1 ms)
	Deceleration time	1 to 10,000 ms (Settable by 1 ms)
Home return	Speed command range	Pulse: 1 to 500,000 Hz
	Acceleration / deceleration method	Linear acceleration / deceleration
	Acceleration time	1 to 10,000 ms (Settable by 1 ms)
	Deceleration time	1 to 10,000 ms (Settable by 1 ms)
	Return method	DOG methods (3 types), Home position method, Data set method
Stop function	Deceleration stop	Performs deceleration stop in the deceleration time of a running operation for each axis.
	Emergency stop	Stops in a deceleration time specified for the emergency stop for each axis.
	Limit stop	Stops in a deceleration time specified for the limit input for each axis.
	System stop	Stops all axes immediately.

Notes: 1) The number of axes is reduced when setting Line driver.
2) The J point control is executable only for the two axes of CH0 and CH1.
3) When performing the J point control or JOG operation, the speed can be changed after the startup.

Speedy, resistant to noise Remote I/O Line up

1. High speed communication
A 12 Mbps maximum transmission speed can be selected. Fast response at update cycle of 1,000 points/2 ms can be achieved.

2. High resistance to noise
Data can be transferred accurately, even in inadequate wiring environments.

3. Various types of compact slave units
Compact slave units (60 × 70 × 40 mm 2.36 × 2.76 × 1.57 in) are smaller than common screw terminal types and are lined up to contribute to space savings. A wide variety of slave units are available.

■Communication specifications (common)

Item	Specifications
Communication method	Two-wire system half duplex
Insulation method	Pulse transformer insulation
Communication speed	6 Mbps / 12 Mbps
Synchronous method	Bit synchronization
Error check	CRC-12
Communication distance	Total length 200 m 656 ft (at 6 Mbps) / 100 m 328 ft (at 12 Mbps) (Note)
Connection method	Multi-drop method
Impedance	100 Ω
Terminator	Mounted on unit
External interface	Master unit: terminal block (2 channels) Slave unit (standard type): screw-type terminal block Slave unit (compact type): connector-type terminal block

Note: Performance when the recommended cable is used Use of the recommended cable is necessary to achieve the maximum transmission distance and number of slave units.

■Input side specifications

Item		Specifications	
		Standard type	Compact type
Insulation method		Photocoupler insulation	Non-isolated
Rated input voltage		24 V DC	
Rated input current		3 mA approx.	4.3 mA approx.
Input impedance		7.5 kΩ approx.	5.6 kΩ approx.
Min. ON voltage / Min. ON current		15 V / 2 mA	17 V / 2 mA
Max. OFF voltage / Max. OFF current		5 V / 0.5 mA	
Response time	OFF→ON	1 ms or less	
	ON→OFF	1 ms or less	

■Output side specifications (except relay)

Item	Specifications	
	Standard type	Compact type (except relay)
Insulation method	Photocoupler insulation	Non-isolated
Output type	Sink type (Open collector output)	
Rated load voltage	20.4 to 28.8 V DC	
Max. control capacity	0.1 A/point	
Max. surge current	0.5 A	
OFF state leakage current	0.1 mA or less	
ON state maximum voltage drop	0.5 V or less	
Repose time	OFF→ON	0.05 ms or less
	ON→OFF	0.5 ms or less
Surge absorber	Zener diode	
Short circuit protection	None	

■Output side specifications (relay)

| Item	Specifications
	Compact type (relay)
Insulation method	Relay insulation
Rated control capacity	1 A 250 V AC (2 A/common) 1 A 30 V DC (2 A/common)
Min. load	0.1 mA 100 mV (resistive load)
Repose time — OFF→ON	10 ms or less
Repose time — ON→OFF	5 ms or less
Life time — Mechanical life	2 × 10^7 operations or more
Life time — Electrical life	1 × 10^5 operations or more (switching frequency: 20 times/minute)
Surge absorber	None
Short circuit protection	None

Introduction of remote analog units

Our PHLS (remote I/O) unit complies with HLS (Hi-speed Link System) specification. This product is used when you want to connect analog units from other manufacturers that comply with the HLS specification.

PHLS master unit **AFP7PHLSM**

Our product PHLS slave unit

Other companies' analog units compliant with HLS (Hi-speed Link System)
M-System Co., Ltd. R7HL series
DC voltage / current input, 4 points
R7HL-SV4-R/H
DC voltage output, 2 points
R7HL-YV2-R/H

Notes: 1) When using another company's HLS-compliant product, be sure to verify that the units operate correctly with the installed target equipment. Please contact the respective manufacturers for product details.
2) Units other than the analog units shown above can also be connected. The following shows the communication specifications of our PHLS (remote I/O) master unit. Please select a unit that meets the specifications.

Communication method	Transmission speed	Connection method
Half-duplex communication (incompatible with full-duplex communication)	6 Mbps / 12 Mbps	Terminal block (connection via screw terminal)

■ I/O circuit diagrams
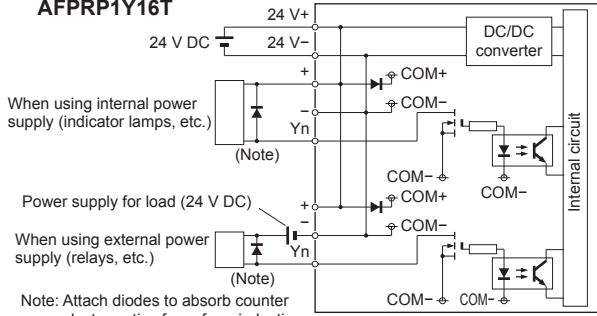

● Standard type (screw-type terminal block)
[Input type]
AFPRP1X08D2 / AFPRP1X16D2
[Output type]
AFPRP1Y16T

Note: Attach diodes to absorb counter electromotive force from inductive load.

[I/O mixed type]
AFPRP1XY16D2T

Note: Attach diodes to absorb counter electromotive force from inductive load.

● Compact type (relay output)
AFPRP2Y04R   [When connecting to separated common terminal]

Note: Attach surge absorber (AC load) at both ends of an AC inductive load.
Attach diodes (DC load) at both ends of a DC inductive load.

● Compact type (e-CON)
AFPRP2X08D2E

● Compact type (connector-type terminal block)
[Input type]
AFPRP2X16D2

[Output type]
AFPRP2Y16T

Note: Attach diodes to absorb counter electromotive force from inductive load.
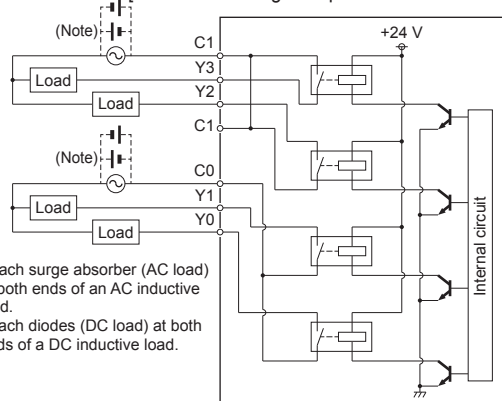

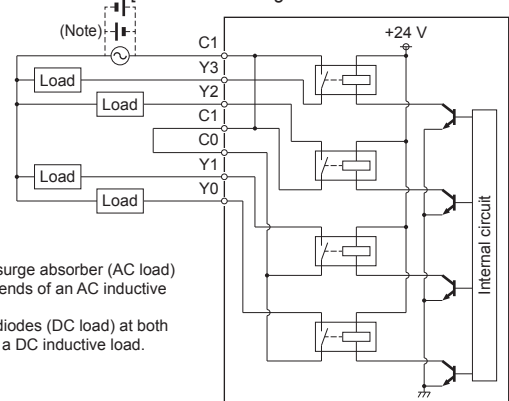

[I/O mixed type]
AFPRP2XY16D2T

Note: Attach diodes to absorb counter electromotive force from inductive load.
[When connecting to shared common terminal]

Note: Attach surge absorber (AC load) at both ends of an AC inductive load.
Attach diodes (DC load) at both ends of a DC inductive load.

Power supply units
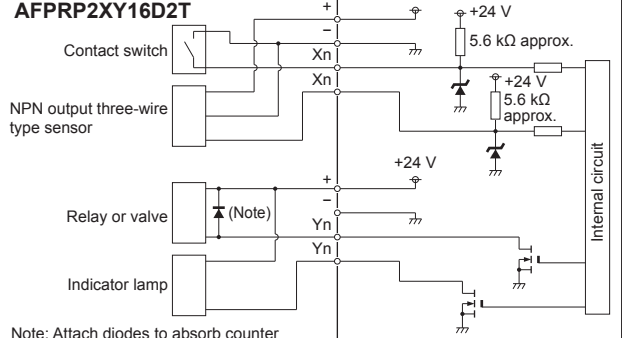

AFP7PSA1

AFP7PSA2

Announce system errors using the built-in external alarm.

1. Equipped with system error alarm contact

Output contact for system error external alarm is provided. If a power supply unit is used concurrently, no additional units are required.

■Specifications

Item	AFP7PSA1	AFP7PSA2
Rated input voltage	100-240 V AC	
Allowable input voltage range	85-264 V AC	
Input power supply frequency	47 to 63 Hz	
Inrush current	40 A or less (Note 2)	
Input current	0.75 A or less	1.25 A or less
Rated output current (at 24 V)	1.0 A	1.8 A
Alarm contact capacity	1 A (30 V DC)	
Remaining lifespan counting function	Not available	Available (Note 1)

Notes: 1) Alarm by CPU unit
2) On cold starting
3) Power supply unit cannot be used with **AFP7CPS21** CPU unit.

Serial communication unit

AFP7NSC

Lineup of serial communication unit that can be expanded with a serial communication cassette.

1. Two serial communication add-on cassettes can be installed

A total of five types of cassettes can be freely combined in a combination of RS-232C, RS-422 or RS-485. Up to 4 channels can be supported in one unit.

2. High expandability

The number of serial communication channels can be increased by connecting a CPU unit. A CPU unit can be connected to maximum of 8 serial communications units.

Note: To connect serial communication unit, the CPU unit has to have firmware Ver. 1.2 or later, and to be running **FPWIN GR7** Ver. 1.3 or later.

■Specifications

Item	AFP7NSC
Number of communication cassette installations	Max. 2 cassettes
Number of installations to CPU unit	Max. 8 units

Note: Communication cassette **AFP7CCET1** is not supported.

Multi-wire link unit

■Specifications

Item	AFP7MW		
Mode	W mode	W2 mode	F mode
Communication method	Token bus method		Polling method
Transmission method	Baseband transmission method		
Transmission speed	500 kbits/sec.	500 kbits/sec., 250 kbits/sec.	500 kbits/sec.
Transmission distance	Extendable to 800 m 2,624.672 ft	Extendable to 800 m 2,624.672 ft (500 kbits/sec.) Extendable to 1,200 m 3,937.008 ft (250 kbits/sec.)	Extendable to 700 m 2,296.588 ft
Number of connectable stations	Max. 32 stations		1 master station + Max. 32 slave stations
Transmission error check	CRC (Cyclic Redundancy Check) system		
Synchronous method	Start-stop synchronization		
Interface	RS485 compatible		
Transmission cable	Twisted-pair cable		Twisted-pair cable, VCTF cable
RAS function	Hardware self-diagnosis function		

Note: Some functions of the **FP7** are not compatible with conventional products.

General specifications on each units

■Common general specifications

Item	Specifications
Ambient temperature	0 to +55 °C +32 to +131 °F, Storage -40 to +70 °C -40 to +158 °F
Ambient humidity	10 to 95 % RH (at +25 °C +77 °F, no condensation), Storage 10 to 95 % RH (at +25 °C +77 °F, no condensation)
Breakdown voltage	500 V AC for 1 minute (Note 2) (Note 3)
Insulation resistance	100 MΩ or more (at 500 V DC)
Vibration resistance	5 to 8.4 Hz, single amplitude of 3.5 mm 0.138 in, 1 sweep/min. (IEC 61131-2); 8.4 to 150 Hz, constant acceleration of 9.8 m/s², 1 sweep/min. (IEC 61131-2), 10 times each in X, Y, and Z directions
Shock resistance	147 m/s² or more , 3 times each in X, Y, and Z directions (IEC 61131-2)
Noise immunity	1,000 V [p-p] with pulse width 50 ns and 1 μs (using a noise simulator)
Operating condition	Free from corrosive gasses and excessive dust

Notes: 1) Please refer to the unit's specification sheet for details of breakdown voltage and insulation resistance.
2) Relay output of input and output unit: 2,300 V AC for 1 minute
3) Between analog input channels of analog input unit: 200 V AC for 1 minute Between channels of output unit: non insulation

Configuration, editing programming, searching, monitoring, debugging, security, etc.

PLC programming demands a lot of time and effort.

Many programmers get hung up on trying out different configurations, consulting the manual, and re-writing repetitive code blocks.

The **Control FPWIN GR7** programming software is designed to eliminate these inefficiencies and minimize programming complexity.

Software helps reduce time and effort in various work situations.

Configuration > Instructions editing > Search > Monitor > Debug > Security

## Designed to boost global expansion

For Programmable Controller
Programming software

## Control FPWIN GR7

Save Time on Initial Setting

Configuration settings, including those for installed units, can be made directly from the same screen.
This eliminates the need to use other software to accomplish this task.

Analog dedicated setting screen

Positioning dedicated setting screen
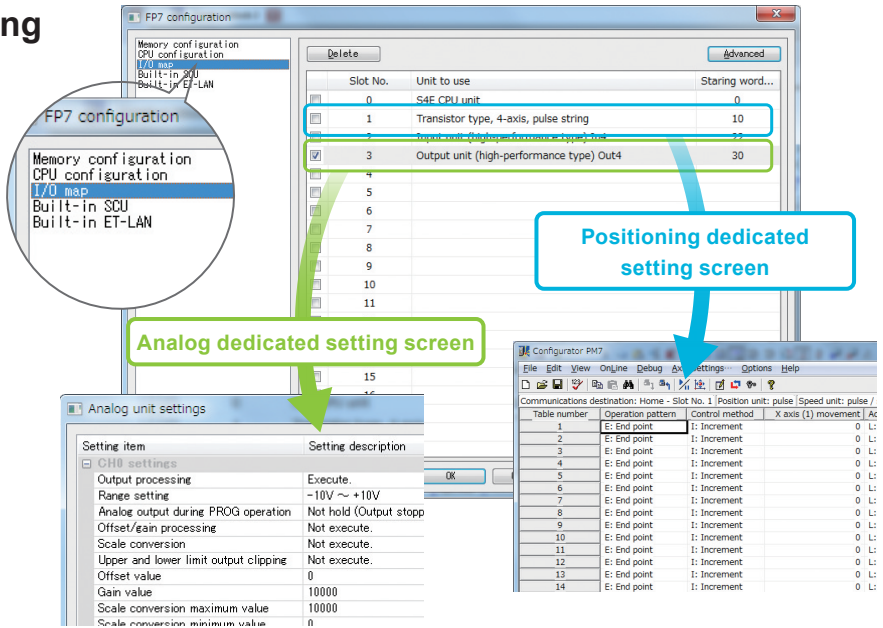

Save Time and Effort by using the "Instruction NAVI".

Enter high level instructions by simply selecting the correct order as dictated by the "Instruction NAVI". The help dialog also supports the selection of high level instructions.

Auto-complete function displays possible instructions when the first few letters are entered.

Following the "Instruction NAVI" makes the system easy to operate

Comments on instructions

Save Time When Cross-Checking Instructions

Comments are directly switchable on the main screen. Various tasks, such as comment rewriting by end users, can be streamlined.
Bulk imported and exported in CSV format comments enables editing of text only in comments. All languages supported by Windows® are available.

*Windows is a trademark or registered trademark of Microsoft Corporation in the United States and other countries.
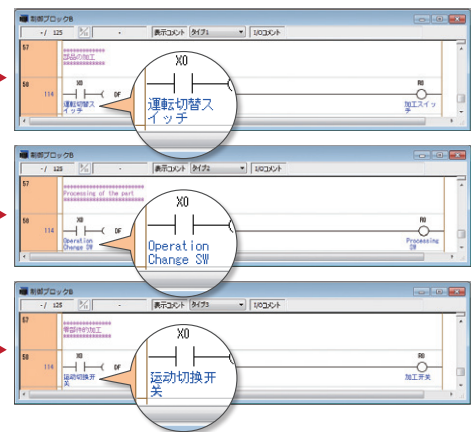

Displayed comments on ladder diagram can be switched.

Three comment types can be registered.
	Example 1	Example 2
Type 1	For design	Japanese
Type 2	For production	English
Type 3	For maintenance	Chinese

Program blocks, block comments, I/O comments and annotation comments can be entered in three types.
For Programmable Controller
Programming software

Control FPWIN GR7

## Save Time When Setting up Program Security

Access rights to the CPU unit can be made more stringent for settings, to prevent easy access to editing, or program outflow.

16 separate rights may be set.

Select administrator or user.

Details can be set.

Save Time When Matching Programs

Programs stored in the CPU unit and on the PC can be cross-checked to identify any non-matching portions. This feature is useful for program search and for finding where modifications are needed.
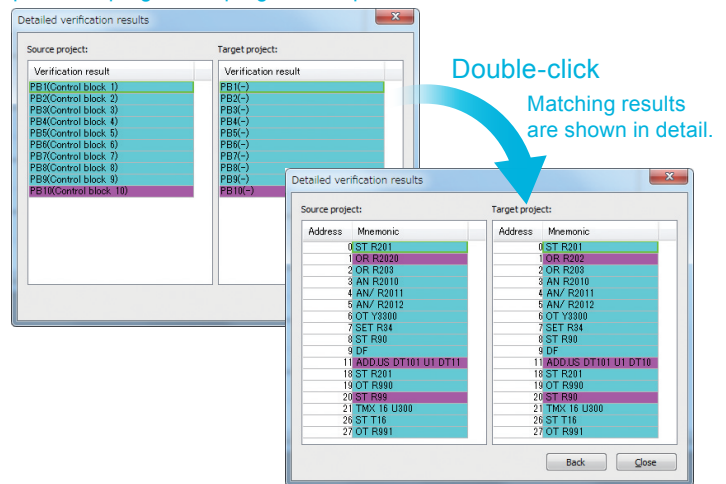

Application example 1
If you want to confirm that programs on the CPU unit and the PC are identical, you can make an instant check.

Application example 2
Content edited by other designers can be checked.

Mismatching program blocks are indicated in pink after program-to-program comparison.

Double-click

Matching results are shown in detail.

Save Time When Monitoring Operations

Multipoint monitoring devices can be registered easily. It allows you to speed up the monitoring process.

Drag and drop for a single point.
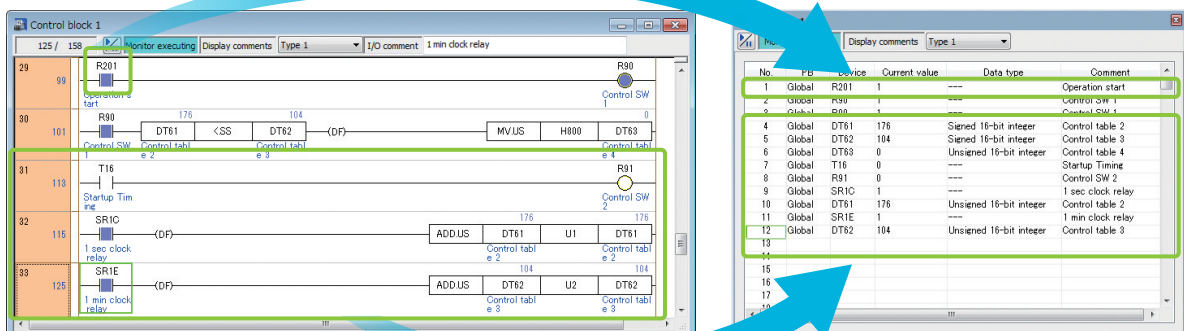

Copy and paste for a specified range.

- **Five programming languages can be used.**
  Programming can be done using the language most familiar to the developer or using the language most suited to the process to be performed.
  High-level (structured text) languages that allow structuring, such as C, are supported.
  5 programming languages: IL (Instruction List), LD (Ladder Diagram), FBD (Function Block Diagram), SFC (Sequential Function Chart), ST (Structured Text)

- **Easy to reuse well-proven programs**
  Efficiency when writing programs has been greatly increased by being able to split programming up for each function and process using structured programming.

- **Keep know-how from getting out**
  By "black boxing" a part of a program, you can prevent know-how from leaking out and improve the program's maintainability.

- **Source program from PLC can be uploaded.**
  Serviceability is improved by being able to read programs and comments from a PLC.

- **Programming for all models in the FP series possible**

For Programmable Controller
Programming software

Control FPWIN Pro7

- 4 languages are fully supported: English, Japanese, Korean, Chinese
- Well-structured through program organization units, task and project management
- Remote programming, service and diagnostics via modem or Ethernet
- Extensive comments and online documentation created hand in hand with the program
- Min. program size through optimized compiler
- Powerful debugging and monitoring tools provide information on the current status of the PLC.
- Comprehensive printed documentation and support for function blocks and libraries help to get your hardware running in record time while maintaining rigorous quality standards.
- Reuse of functions and function blocks saves time.

Control FPWIN Pro and its comprehensive, powerful libraries

The PLC programming software **Control FPWIN Pro** has been evolving for a long time.

As expected, the latest version of the software includes even more function blocks to help you efficiently program your PLC.

The innovations of this version include simplified handling of analog units, serial communication, the integrated clock and **GT** series programmable displays.

The online help was also improved in several key areas:

- Tables for slot number and corresponding address ranges are provided for analog expansion units.
- Explanations for DIP switch settings
- A/D value assignment tables
- Wiring instructions

Additional function blocks for simplifying work with analog values, e.g.:
- Scaling
- Averaging
- Assigning addresses for expansion units

The new function blocks for serial communication cover 90 % of all practical applications, except for telecontrol.

Moreover, diverse tasks for **GT** series programmable displays are now easy to manage,

e.g. changing screens, adjusting brightness, or controlling control bits and words.

Working with times and dates as well as calculations involving times and dates are now extensively supported.

The editors, such as the global variable list editor, offer quick info about PLC addresses, which makes adjusting addresses in the variable declarations as easy as pie.

You can drag & drop variables, function blocks, etc. from the navigation and selection panes into the program editors.

You can copy & paste example programs in the online help into your editor and modify them as necessary.

Product types

■CPU units

Product name		Standard program capacity	Max. program capacity	Operation speed	Ethernet function (Note 2)	SD memory card function	Encryption function (Note 3, 4)	Part No.
FP7 CPU units		196 k steps	234 k steps	From 11 ns	Built-in	Built-in	–	**AFP7CPS41E**
		120 k steps	120 k steps	From 11 ns	Built-in	Built-in	–	**AFP7CPS31E**
		120 k steps	120 k steps	From 11 ns	–	Built-in	–	**AFP7CPS31**
	Security enhanced type	196 k steps	234 k steps	From 11 ns	Built-in	Built-in	Built-in	**AFP7CPS41ES**
		120 k steps	120 k steps	From 11 ns	Built-in	Built-in	Built-in	**AFP7CPS31ES**
		120 k steps	120 k steps	From 11 ns	–	Built-in	Built-in	**AFP7CPS31S**
	Best value model	64 k steps	64 k steps	From 14 ns	–	–	–	**AFP7CPS21**

Notes: 1) One end unit is attached to the CPU unit.
2) Ethernet function includes FTP server / client function, Web server function, HTTP client function, E-mail sending function and EtherNet/IP compatibility. Ethernet is a registered trademark of Fuji Xerox Co., Ltd. and Xerox Corporation. Ethernet/IP is a trademark of ODVA.
3) When exporting to China, please use a CPU that does not have an encryption function.
4) For CPU units with encryption function, please use the security enhanced type programming tools.

■Expansion units

Product name	Specifications	Part No.
FP7 expansion master unit	Expansion of up to 3 slave units possible	**AFP7EXPM**
FP7 expansion slave unit (Note 1)	Up to 16 units can be connected to 1 slave unit.	**AFP7EXPS**
Expansion cables	Length: 0.5 m 1.640 ft	**AFP7EXPCR5**
	Length: 1 m 3.281 ft	**AFP7EXPC01**
	Length: 3 m 9.843 ft	**AFP7EXPC03**
	Length: 10 m 32.808 ft	**AFP7EXPC10**

Notes: 1) One end unit is attached to the expansion slave unit.
2) Expansion unit cannot be used with the **AFP7CPS21** CPU unit.

■Add-on cassettes

Product name	Specifications	Part No.
FP7 communication cassettes	RS-232C, 1 channel (insulated)	**AFP7CCS1**
	RS-232C, 2 channels (insulated)	**AFP7CCS2**
	RS-422 or RS-485, 1 channel (insulated)	**AFP7CCM1**
	RS-422 or RS-485, 2 channels (insulated)	**AFP7CCM2**
	RS-232C, 1 channel (insulated) and RS-485, 1 channel (insulated)	**AFP7CCS1M1**
	Ethernet 100Base-TX / 10Base-T	**AFP7CCET1**
FP7 function cassettes	Analog input, 2 channels, voltage / current	**AFP7FCAD2**
	Analog input and output, input: 2 channels, output: 1 channel	**AFP7FCA21**
	Thermocouple input, 2 channels K / J	**AFP7FCTC2**

■Power supply units

Product name	Input specifications	Output specifications	Other functions	Part No.
FP7 power supply units	100-240 V AC	24 V DC, 1.0 A	System error alarm output contact	**AFP7PSA1**
	100-240 V AC	24 V DC, 1.8 A	System error alarm output contact and remaining lifespan counting function	**AFP7PSA2**

Note: Power supply unit cannot be used with the **AFP7CPS21** CPU unit.

■Input and output units

Product name	Type	Number of points	Connection method	Specifications	Part No.
FP7 input units	DC input	16 points	Terminal block	12 to 24 V DC, common polarity: +/- common, input time constant setting	**AFP7X16DW**
		32 points	MIL connector	24 V DC, common polarity: +/- common, input time constant setting	**AFP7X32D2**
		64 points	MIL connector	24 V DC, common polarity: +/- common, input time constant setting	**AFP7X64D2**
FP7 output units	Relay output	16 points	Terminal block	2 A/point, 5 A/common, 16 points/common (without relay socket)	**AFP7Y16R**
	Transistor output, sink (NPN)	16 points	Terminal block	Load current: 1.0 A, 5 A/common, 16 points/common	**AFP7Y16T**
		32 points	MIL connector	Load current: 0.3 A, 3.2 A/common, 32 points/common	**AFP7Y32T**
		64 points	MIL connector	Load current: 0.3 A / 0.1 A, mixed 3.2 A /common, 32 points/common	**AFP7Y64T**
	Transistor output, source (PNP)	16 points	Terminal block	Load current: 1.0 A, 5 A/common, 16 points/common	**AFP7Y16P**
		32 points	MIL connector	Load current: 0.3 A, 3.2 A/common, 32 points/common	**AFP7Y32P**
		64 points	MIL connector	Load current: 0.3 A / 0.1 A, mixed 3.2 A /common, 32 points/common	**AFP7Y64P**
FP7 input and output mixed units	DC input transistor output, sink (NPN)	Input: 32 points Output: 32 points	MIL connector	Input: 24 V DC, 32 points/common Output: load current: 0.3 A / 0.1 A, mixed 3.2 A/common, 32 points/common	**AFP7XY64D2T**
	DC input transistor output, source (PNP)	Input: 32 points Output: 32 points	MIL connector	Input: 24 V DC, 32 points/common Output: load current: 0.3 A / 0.1 A, mixed 3.2 A/common, 32 points/common	**AFP7XY64D2P**

■Analog input and output units

Product name	Specifications	Number of channels	Part No.
FP7 analog input unit (High-speed and multi-channel type)	Voltage / current, conversion rate: 25 μs/channel, resolution: max. 16 bits, accuracy: ±0.1 % F.S. or less (at +25 °C +77 °F)	8 channels	**AFP7AD8**
FP7 analog input unit (High-speed and high-accuracy type)	Voltage / current, conversion rate: 25 μs/channel, resolution: max. 16 bits, accuracy: ±0.05 % F.S. or less (at +25 °C +77 °F), insulation between channels	4 channels	**AFP7AD4H**
FP7 analog output unit (High-speed and high-accuracy type)	Voltage / current, conversion rate: 25 μs/channel, resolution: max. 16 bits, accuracy: ±0.05 % F.S. or less (at +25 °C +77 °F), insulation between channels	4 channels	**AFP7DA4H**

Note: Please note that the digital converted value corresponding to about 2 V of analog input is stored in the input relay area (WX) for channels which are not connected to input when setting the voltage range with **AFP7AD8**.

Product types

■ Temperature input units

Product name	Specifications	Number of channels	Part No.
FP7 thermocouple multiple analog input unit	Thermocouple (K, J, T, N, R, S, B, E, PLII and WRe5-26), voltage / current, conversion rate: 5 ms/channel, resolution: max. 16 bits, accuracy: ±0.1 % F.S. (at +25 °C +77 °F), insulation between channels	8 channels	**AFP7TC8**
FP7 resistance temperature detector input unit	Resistance temperature detector (Pt100, JPt100 and Pt1000), conversion rate: 25 ms/channel, accuracy: ±0.1 % F.S. (at +25 °C +77 °F), insulation between channels	8 channels	**AFP7RTD8**

Note: The temperature input units are compatible with the FP7 CPU units with firmware of Ver. 2.0 or later on page 34. The compatible version of **Control FPWIN GR7** is 2.2 or later.

■ High-speed counter units

Product name	Input time constant	Number of counters	Counter type	Input type	Part No.
FP7 high-speed counter units	Selection type	2 channels	Liner counter / ring counter	Individual input: 1 multiple, 2-multiple Direction discrimination input: 1 multiple, 2-multiple 2-phase input: 1 multiple, 2-multiple, 4-multiple	**AFP7HSC2T**
	Selection type	4 channels	Liner counter / ring counter	Individual input: 1 multiple, 2-multiple Direction discrimination input: 1 multiple, 2-multiple 2-phase input: 1 multiple, 2-multiple, 4-multiple	**AFP7HSC4T**

■ Positioning units

Product name	Output type	Number of axes controlled	Operation speed	Functions	Part No.
FP7 positioning units	Transistor	2 axes	1 pps to 500 kpps	Electronic cam and electronic gear functions, linear interpolation, circular interpolation	**AFP7PP02T**
	Transistor	4 axes	1 pps to 500 kpps		**AFP7PP04T**
	Line driver	2 axes	1 pps to 4 Mpps		**AFP7PP02L**
	Line driver	4 axes	1 pps to 4 Mpps		**AFP7PP04L**

■ Pulse output units

Product name	Output type	Number of axes controlled	Operation speed	Part No.
FP7 pulse output units	Transistor	2 axes	1 pps to 500 kpps	**AFP7PG02T**
	Transistor	4 axes	1 pps to 500 kpps	**AFP7PG04T**
	Line driver	2 axes	1 pps to 4 Mpps	**AFP7PG02L**
	Line driver	4 axes	1 pps to 4 Mpps	**AFP7PG04L**

■ Motion control units

Product name	Real axis	Virtual axis	Part No.
FP7 motion control unit EtherCAT® type	16	8	**AFP7MC16EC**
	32	16	**AFP7MC32EC**
	64	32	**AFP7MC64EC**

* EtherCAT is registered trademark and patented technology, licensed by Beckhoff Automation GmbH, Germany.

■ Multi input/output units

Product name	Number of points	Connection method	Functions	Part No.
FP7 multi input/output unit	Input: 16 points Output: 16 points	MIL connector	Input: total 16 points, ・DC input: max. 16 points, ・High-speed counter: max. 4 channels (1 channel: 4 points), ・Interrupt input: max. 8 points, Output: total 16 points, ・Transistor output: max. 16 points, ・Pulse output: max. 4 channels (Note) (1 channel: 2 points), ・PWM output: max. 4 channels (1 channel: 1 points), ・Comparison output: max. 8 points, ・Positioning: max. 4 channels (**AFP7MXY32DWDH** only)	**AFP7MXY32DWD**
Positioning type				**AFP7MXY32DWDH**

Note: Trapezoidal control with acceleration / deceleration not yet supported.

■ Serial communication unit

Product name	Number of communication cassette	Number of installations of CPU unit	Part No.
FP7 serial communication unit	Max. 2 cassettes	Max. 8 units	**AFP7NSC**

Product types

■PHLS (remote I/O) master unit

Product name	Max. points	Communication speed	Total distance	Max. number of connections	Part No.
FP7 PHLS master unit	1,008 points	6 Mbps / 12 Mbps	200 m 656 ft (at 6 Mbps) / 100 m 328 ft (at 12 Mbps)	63 slaves	**AFP7PHLSM**

■PHLS (remote I/O) slave units

Product name	Shape	Connection method	Type	Number of points	Specifications	Part No.
FP7 PHLS slave units	Standard type	Screw-type terminal block	DC input	8 points	24 V DC, common polarity: +, 8 points/common	**AFPRP1X08D2**
			DC input	16 points	24 V DC, common polarity: +, 16 points/common	**AFPRP1X16D2**
			Transistor output (sink)	16 points	Load current: 0.1 A, common polarity: -, 0.4 A/common, 16 points/common	**AFPRP1Y16T**
			DC input transistor output (sink)	Input: 8 points Output: 8 points	Input: 24 V DC, common polarity: +, 8 points/common Output: load current: 0.1 A, common polarity: -, 0.4 A/common, 8 points/common * Input / output common is shared.	**AFPRP1XY16D2T**
	Compact type	e-CON	DC input	8 points	24 V DC, common polarity: +, 8 points/common	**AFPRP2X08D2E**
		Connector-type terminal block	DC input	16 points	24 V DC, common polarity: +, 16 points/common	**AFPRP2X16D2**
			Transistor output (sink)	16 points	Load current: 0.1 A, common polarity: -, 0.8 A/common, 16 points/common	**AFPRP2Y16T**
			Transistor output (sink)	Input: 8 points Output: 8 points	Input: 24 V DC, common polarity: +, 8 points/common Output: load current: 0.1 A, common polarity: -, 0.8 A/common, 8 points/common * Input / output common is shared.	**AFPRP2XY16D2T**
			Relay output	4 points	1 A/point, 2 A/common, 2 points/common	**AFPRP2Y04R**

■Multi-wire link unit

Product name	Specifications	Part No.
FP7 multi-wire link unit	Supports MEWNET-W / MEWNET-W2 / MEWNET-F (PLC link)	**AFP7MW**

■Option

Product name	Specifications	Part No.
FP-X backup battery	Battery for back up of clock / calendar operation	**AFPX-BATT**

■Programming tools

Product name		Type	Specifications	Part No.
Programming software for Windows® **Control FPWIN GR7**	Japanese version	Supports only CPU unit without encryption function	Windows®10 (32-bit / 64-bit) / Windows®8.1 (32-bit / 64-bit) / Windows®8 (32-bit / 64-bit) / Windows®7 SP1 or more (32-bit / 64-bit) / Windows® Vista SP2 / XP SP3	**AFPSGR7JP**
	Security enhanced type	Supports both CPU unit with/without encryption function		**AFPSGR7JPS**
	English version	Supports only CPU unit without encryption function		**AFPSGR7EN**
	Security enhanced type	Supports both CPU unit with/without encryption function		**AFPSGR7ENS**
Programming software for Windows® **Control FPWIN Pro7**	English, Japanese, Korean and Chinese	Supports all **FP** series PLCs (FP7 series: Supports only CPU unit without encryption function)	Windows®10 (32-bit / 64-bit) / Windows®8.1 (32-bit / 64-bit) / Windows®8 (32-bit / 64-bit) / Windows®7 SP1 or more (32-bit / 64-bit)	**AFPSPR7A**
	Security enhanced type	Supports all **FP** series PLCs (FP7 series: Supports both CPU unit with/without encryption function) * The encryption function will be offered in the future.		**AFPSPR7AS**

Notes: 1) Windows is a registered trademark or trademark of registered trademarks of Microsoft Corporation in the United States and other countries.
2) When exporting to China, CPU unit without encryption function is required.
3) Please use a commercially available USB2.0 cable (A type mini B) for connecting a control unit with a PC.

■Web screen creation tools

Product name	Descriptions	Part No.
Control Web Creator	Windows version. Downloadable free of charge from our website. Please purchase Key unit separately.	**AFPSWC**
Key unit	License key for **Control Web Creator**. 1 license. For USB port.	**AFPSWCKEY**

●Key unit **AFPSWCKEY**

*Key unit is required to create Web content.
 You do not need Key unit to view Web content on a browser.

■Motion control setting tools

Product name	Descriptions	Part No.
Motion control setting tool **Control Motion Integrator**	Windows version. Downloadable free of charge from our website. Please purchase Key unit separately.	**AFPSMTEN**
Control Motion Integrator Key unit	License key for **Control Motion Integrator**. 1 license. For USB port. Please purchase **Control Motion Integrator** if you use it after 60 days since installing it.	**AFPSMTKEY**

●Key unit **AFPSMTKEY**

Product types

■Options

Others

Product name	Appearance	Descriptions	Part No.
End unit		Supplied with **FP7** CPU unit and expansion slave unit.	**AFP7END**
FP7 terminal block		Supplied with I/O unit and analog I/O unit with terminal block. (5 pieces)	**AFP7TER**
Discrete-wire connector set (40 leads)		Supplied with **FP7** input and output unit (MIL connector), high-speed counter unit, positioning unit and pulse output unit. (2 pieces)	**AFP2801**
Flat cable connector set (40 leads)		Supplied with **FP7** input and output unit (MIL connector), high-speed counter unit, positioning unit and pulse output unit. For simple connection using a flat cable. (2 pieces)	**AFP2802**
Multi-wire connector pressure contact tool		Necessary when wiring transistor output type connectors.	**AXY52000FP**
Motor driver I/F terminal II 1 shaft (Note)		Connectable MINAS series with **FP7** positionning unit, pulse output unit, **FPΣ** positionning unit, **FP2** positionning unit (multi-function type) (Connectable line driver output unit only)	**AFP8503**
Motor driver I/F terminal II 2 shafts (Note)			**AFP8504**
MINAS A4 series / A5 series / A6 series exclusive cable 1 m 3.281 ft		Connectable MINAS A4 series, A6 series with motor driver I/F terminal II	**AFP85151**
MINAS A4 series / A5 series / A6 series exclusive cable 2 m 6.562 ft			**AFP85152**
Positioning connection cable 0.5 m 1.640 ft		Connectable **FP7** positionning unit, pulse output unit, **FPΣ** positionning unit, **FP2** positionning unit (multi-function type) with motor driver I/F terminal II	**AFP85100**
Positioning connection cable 1 m 3.281 ft			**AFP85101**

Note: Motor driver I/F terminal II (1 shaft and 2 shafts)
 • Servo signal of **FP7** positioning unit and **FP7** pulse output unit can not be used.
   Please use the servo ON terminal of motor driver I/F terminal II.
 • Timing input of **FP7** pulse output unit can not be used.

Pressure contact for multi-wire

Product name	Adapted cable size	Electric wire		Part No.
		Coated diameter	Remarks	
Pressure contact for multi-wire	AWG#22	ø1.5 to ø1.1 mm ø0.059 in to ø0.043 in	AWG#22: 12 wires / 0 .18 stranded wire	**AXW7221FP**
	AWG#24		Stranded wire	
	AWG#26	ø1.3 to ø1.1 mm ø0.051 in to ø0.043 in	Stranded wire	**AXW7231FP**
	AWG#28		Stranded wire

				RS-422 / RS-485	Pure black	Available	AIG703WMNMB2
					Silver		AIG703WMNMS2
GT703G	TFT monochrome LCD (green/orange/red backlight)	3.8 inch	5 V DC	RS-232C	Pure black	Available	AIG703WGN1B5
					Silver		AIG703WGN1S5
				RS-422 / RS-485	Pure black	Available	AIG703WGNMB5
					Silver		AIG703WGNMS5
			24 V DC	RS-232C	Pure black	Available	AIG703WGN1B2
					Silver		AIG703WGN1S2
				RS-422 / RS-485	Pure black	Available	AIG703WGNMB2
					Silver		AIG703WGNMS2
GT12M	TFT monochrome LCD (white/pink/red backlight)	4.6 inch	24 V DC	RS-232C	Pure black	Not available	AIG12MQ02D
					Hairline silver		AIG12MQ03D
				RS-422 / RS-485	Pure black	Not available	AIG12MQ04D
					Hairline silver		AIG12MQ05D
				RS-232C	Pure black	Available	AIG12MQ12D
					Hairline silver		AIG12MQ13D
				RS-422 / RS-485	Pure black	Available	AIG12MQ14D
					Hairline silver		AIG12MQ15D
GT12G	TFT monochrome LCD (green/orange/red backlight)	4.6 inch	24 V DC	RS-232C	Pure black	Not available	AIG12GQ02D
					Hairline silver		AIG12GQ03D
				RS-422 / RS-485	Pure black	Not available	AIG12GQ04D
					Hairline silver		AIG12GQ05D
				RS-232C	Pure black	Available	AIG12GQ12D
					Hairline silver		AIG12GQ13D
				RS-422 / RS-485	Pure black	Available	AIG12GQ14D
					Hairline silver		AIG12GQ15D

Note: The model of the "Available" have a built-in clock.
