- 4) The derating curve is derived from the basic curve multiplied by the derating factor of 0.8.
- 5) The value of rated current varies with the ambient temperature. It is recommended to use the product within the derating curve zone. When using a UL or TÜV approved product, please use the product within the specified range as well as the derating curve area.
- 6) The measurement method of the derating curve is shown below.
  - Test specimen: This product, unused prior to testing.
  - Test cable conductor cross sectional area: AWG #2 (38mm²)
  - Test condition: Power supplied while the specimen is in a stationary state and then measured.
