1 SCOPE

This document describes key hardware aspects of the Laird Connectivity Sona™ IF573 series wireless modules providing either PCIe v3.0 Gen2 or SDIO 3.0 interface for WLAN connection and high-speed 4-wire UART interface for Bluetooth® connection. This document is intended to assist device manufacturers and related parties with the integration of this radio into their host devices. Data in this document is drawn from several sources and includes information found in the Infineon CYW55573MIWBGT data sheet issued on March 23, 2023, along with other documents provided by Infineon.

Note: The information in this document is subject to change. Please contact Laird Connectivity to obtain the most recent version of this document.

2 INTRODUCTION

2.1 General Description

The Sona IF573 series wireless module is an integrated, small form factor Wi-Fi/Bluetooth module that is optimized for low-power mobile devices, featuring:

- Wi-Fi 6E: Tri-band 2x2 MIMO IEEE 802.11a/b/g/n/ac/ax WLAN
- Bluetooth® 5.4: Dual Mode

The integration of all WLAN and Bluetooth functionality in a single package supports low cost and simple implementation along with flexibility for platform-specific customization. It is available in both M.2 2230 E-Key and M.2 1318 solder-down form factor.

This device is pre-calibrated and integrates the complete transmit/receive RF paths including bandpass filter, diplexer, switches, reference crystal oscillator, and power management units (PMU). Both variants support three integrated MHF4 connectors, with two ports for WLAN and one dedicated for Bluetooth. The M.2 1318 solder down module also supports an RF trace pin option for use with external antenna solutions. For a list of certified antennas see [Certified Antennas](#) in the datasheet.

The Sona IF573 series device supports IEEE 802.11ax tri-band (2.4/5/6 GHz) 2x2 MIMO with data rates up to MCS11 (287 Mbps PHY data rate for 2.4 GHz band and 1.2 Gbps PHY data rate for 5/6 GHz). The device has a dedicated Bluetooth port for best Wi-Fi + Bluetooth coexistence performance. The device's low power consumption, radio architecture and power management unit (PMU) proprietary power save technologies allow for extended battery life.

In addition, its tri-band IEEE 802.11ax and Bluetooth radio includes full digital MAC and baseband engines that handle all 802.11 CCK/OFDM/OFDMA® 2.4/5/6 GHz and Bluetooth 5.4 (Basic Rate, Enhanced Data Rate, and Bluetooth Low Energy) baseband and protocol processing.

The Sona IF573 series wireless modules include two product SKUs which have different RF paths. Please contact Laird Connectivity Sales/FAE for further information. Ordering information is listed in [Table 1](#).

Table 1: Product ordering information

Part Number	Description
453-00117R	Sona IF573 1318 Module, MHF4, Tape and Reel
453-00117C	Sona IF573 1318 Module, MHF4, Cut Tape
453-00118R	Sona IF573 1318 Module, RF Trace Pin, Tape and Reel
453-00118C	Sona IF573 1318 Module, RF Trace Pin, Cut Tape
453-00119	Sona IF573 M.2 2230 Module, Key E, SDIO/UART
453-00120	Sona IF573 M.2 2230 Module, Key E, PCIe/UART
453-00119-K1	Sona IF573 M.2 2230 Module Development Kit, SDIO/UART
453-00120-K1	Sona IF573 M.2 2230 Module Development Kit, PCIe/UART

3 SONA IF573 SERIES FEATURES SUMMARY

The Laird Connectivity Sona IF573 series device features are described in [Table 2](#).

Table 2: Sona IF573 series wireless module features

Feature	Description
Radio Front End	<ul style="list-style-type: none"> Integrates the complete transmit/receive RF paths including bandpass filter, diplexer, switches, reference crystal oscillator, and power management unit (PMU) Supports tri-band (2.4/5/6 GHz) Supports 20/40/80 MHz channel bandwidth Supports 2x2 WLAN antenna configuration with dedicated Bluetooth antenna port
<p>The <i>Bluetooth</i>® word mark and logos are registered trademarks owned by Bluetooth SIG, Inc. Any use of such marks by Laird Connectivity is under license. Other trademarks and trade names are those of their respective owners.</p>	
Power Management	Two buck regulator, multiple LDO regulators, and a power management unit (PMU) are integrated into the CYW55573MIWBGT. All regulators are programmable via the PMU. These blocks simplify power supply design for Bluetooth and WLAN functions in embedded designs.
Pre-Calibration	RF system tested and calibrated in production
Sleep Clock	An external sleep clock of 32.768 kHz is required.
Host Interface	<p>The Sona IF573 M.2 card provides two interfaces for customers to choose:</p> <ol style="list-style-type: none"> SDIO/UART, Wi-Fi section provides support for SDIO v3.0 and also is backward compatible with SDIO v2.0. Bluetooth section supports a high-speed 4-wire UART interface. PCIe/UART, Wi-Fi section provides support for PCIe Gen2 (3.0 Compliant). Bluetooth section supports a high-speed 4-wire UART interface.
Advanced WLAN	<ul style="list-style-type: none"> IEEE 802.11a/b/g/n/ac/ax compliant, tri-band capable (2.4/5/6 GHz) 2x2 MIMO providing up to 1.2 Gbps PHY data rate for 5/6 GHz (1024-QAM modulation) 2x2 MIMO providing up to 287 Mbps PHY data rate for 2.4 GHz (1024-QAM modulation) Supports 20, 40, and 80 MHz channels with optional SGI (1024-QAM modulation) Background channel availability check (CAC) scan for immediate switch to candidate DFS channel On-chip power amplifiers and low-noise amplifiers for both bands Support wide variety of WLAN encryption: WPA/WPA2/WPA3/TKIP/AES and IEEE 802.11i compatibility
Advanced Bluetooth	<ul style="list-style-type: none"> Bluetooth 5.4 (BDR + EDR + Bluetooth LE) Dedicated Bluetooth RF path port Bluetooth Class 1 or Class 2 transmitter operation Support data rate: 1 Mbps (GFSK), 2 Mbps ($\pi/4$-DQPSK), 3 Mbps (8-DPSK), LE-1 Mbps, LE-2 Mbps, LE-LR-500K (S=2) and LE-LR-125K (S=8) Supports extended synchronous connections (eSCO) for enhanced voice quality by allowing for retransmission of dropped packets Adaptive frequency hopping (AFH) for reducing radio frequency interference Host controller interface (HCI) using a highspeed UART and PCM/I2S for audio data Low power consumption improves battery life of IoT and embedded devices Supports multiple simultaneous Advanced Audio Distribution Profiles (A2DP) for stereo sound On-chip memory includes 512 KB SRAM and 2 MB ROM

4 SPECIFICATIONS

Table 3: Specifications

Feature	Description								
Physical Interface	M.2 2230 E-Key standard form factor M.2 1318 108-pin LGA package (including 8 thermal ground pads under the package)								
Wi-Fi Interface	PCIe v3.0 Gen2 Secure Digital I/O 2.0/3.0								
Bluetooth/BLE Interface	Host Controller Interface (HCI) using high speed UART								
Main Chipset	Infineon AIROC™ CYW55573MIWBGT								
Input Voltage Requirements	Typical DC 3.3 V, operating range from DC 3.13V to 3.5V								
I/O Signalling Voltage	Compliant with M.2 standard Typical DC 1.8 V ± 5%								
Operating Temperature	-40° to +85°C (-40° to +185°F) Note: Absolute junction temperature 125 °C limit is maintained through active thermal monitoring, throttling, and turning off one of the TX chains or both.								
Operating Humidity	10 to 90% (non-condensing)								
Storage Temperature	-40° to +85°C (-40° to +185°F)								
Storage Humidity	10 to 90% (non-condensing)								
MSL (Moisture Sensitivity Level)	4								
Maximum Electrostatic Discharge	Conductive 8KV; Air coupled 12KV (follows EN61000-4-2)								
Size	<table border="0"> <tr> <td>M.2 1318</td> <td>M.2 E-Key</td> </tr> <tr> <td>▪ Length: 18 mm</td> <td>▪ Length: 30 mm</td> </tr> <tr> <td>▪ Width: 13 mm</td> <td>▪ Width: 22 mm</td> </tr> <tr> <td>▪ Thickness: 0.43 mm</td> <td>Thickness: 3.1 mm</td> </tr> </table>	M.2 1318	M.2 E-Key	▪ Length: 18 mm	▪ Length: 30 mm	▪ Width: 13 mm	▪ Width: 22 mm	▪ Thickness: 0.43 mm	Thickness: 3.1 mm
M.2 1318	M.2 E-Key								
▪ Length: 18 mm	▪ Length: 30 mm								
▪ Width: 13 mm	▪ Width: 22 mm								
▪ Thickness: 0.43 mm	Thickness: 3.1 mm								
Weight – g (oz.)	<table border="0"> <tr> <td>M.2 1318</td> <td>M.2 E-Key</td> </tr> <tr> <td>▪ ~0.7</td> <td>▪ 3</td> </tr> </table>	M.2 1318	M.2 E-Key	▪ ~0.7	▪ 3				
M.2 1318	M.2 E-Key								
▪ ~0.7	▪ 3								
Wi-Fi Media	Direct Sequence-Spread Spectrum (DSSS) Complementary Code Keying (CCK) Orthogonal Frequency Division Multiplexing (OFDM) Orthogonal Frequency Division Multiple Access (OFDMA)								
Bluetooth Media	Frequency Hopping Spread Spectrum (FHSS)								
Wi-Fi Multimedia	WMM Wi-Fi Multimedia - PowerSave (WMM-PS with U-APSD) WMM-Sequential Access (WMM-SA)								
Network Architecture Types	Infrastructure (client operation)								
Wi-Fi Standards	IEEE 802.11ax, 11ac, 11a/b/g/n, 11d/h, 11i, 11r, 11w, 11e, 11k, 11ai, 11v								
Bluetooth Standards	Bluetooth 2.1 + EDR, 3.0, 4.2, 5.0, 5.1, 5.2, 5.3, 5.4								

Feature	Description
Wi-Fi Data Rates Supported	Support 802.11 ax/ac/a/b/g/n 2x2 MU-MIMO. 802.11b (DSSS, CCK) 1, 2, 5.5, 11 Mbps 802.11a/g (OFDM) 6, 9, 12, 18, 24, 36, 48, 54 Mbps 802.11n (OFDM, HT20/HT40, MCS0-15) 802.11ac (OFDM, VHT20, MCS0-8; OFDM, VHT40/HT80, MCS0-9) 802.11ax (2.4 GHz / OFDM / HE20 / MCS0-11; 2.4 GHz / OFDMA / HE20 / MCS0-11) 802.11ax (5 GHz, 6 GHz / OFDM / HE20, HE40, HE80 / MCS0-11; 5 GHz, 6 GHz / OFDMA / HE20, HE40, HE80 / MCS0-11)

5 WLAN FUNCTIONAL DESCRIPTION

5.1 Overview

The Sona IF573 series wireless module is designed based on the Infineon AIROC CYW55573MIWBGT Wi-Fi 6E chipset (dual-core 2x2 MIMO). It is optimized for high speed, reliability, and low-power embedded applications. It is integrated with tri-band WLAN (2.4/5/6 GHz) and Bluetooth 5.4. Its functionality is listed in [Table 4](#).

Table 4: WLAN functions

Feature	Description
WLAN MAC	<ul style="list-style-type: none"> ▪ Enhanced MAC for supporting IEEE 802.11a/b/g/n/ac/ax features ▪ Transmission and reception of HE-SU and HE-ER-SU PPDU ▪ Reception of HE-MU PPD -OFDMA/MU-MIMO frame ▪ Transmission of HE-TB PPDU (Uplink MU OFDMA) ▪ Transmission and reception of A-MPDUs/AMSDUs for very high throughput (VHT) ▪ Support for power management schemes, including WMM power-save, programmable state machine (PSM) operation ▪ Support for all ACK and Block-ACK policies as per standard ▪ Interframe space timing support, including RIFS ▪ Support for RTS/CTS and CTS-to-nowhere frame sequences for protecting frame exchanges ▪ Timing synchronization function (TSF), network allocation vector (NAV) maintenance, and target beacon transmission time (TBTT) generation in hardware and capturing the TSF timer on an external time synchronization pulse ▪ Hardware offload for cipher suites/encryption types WEP, TKIP(WPA), AES(WPA2), support for WPA3-SAE and key management ▪ Support for coexistence with Bluetooth ▪ RTS-CTS based BW signaling mechanism support
WLAN Security	<ul style="list-style-type: none"> ▪ WLAN Encryption features supported include: <ul style="list-style-type: none"> – Temporal Key Integrity Protocol (TKIP)/Wired Equivalent Privacy (WEP) – Advanced Encryption Standard (AES)/Wi-Fi Multi-Media (WMM) – WLAN Authentication and Private Infrastructure (WPAI)

6 BLUETOOTH FUNCTIONAL DESCRIPTION

The Sona IF573 series wireless module includes a fully integrated Bluetooth baseband/radio. Several features and functions are listed in [Table 5](#).

Table 5: Bluetooth functions

Feature	Description
Bluetooth Interface	<ul style="list-style-type: none"> ▪ Voice interface: <ul style="list-style-type: none"> – Supported by PCM transports and bi-directional operations. – Sample rates 8k for NBS and 16k for WBS supported. – Sample width is limited to 16-bits. – Synchronization clock width of 1 or 3 (short or long) – Bit clocks of 128k, 256k, 512k, 1024k and 2024k, the only difference being the number of 16bit slots. – HFP samples can be taken from any available slot. Slot 0 is the default slot. ▪ High-Speed UART interface
Bluetooth Core functionality	<ul style="list-style-type: none"> ▪ Supports all Bluetooth 5.3 and 4.2 features ▪ Dual-mode Bluetooth low energy ▪ Bluetooth LE LE-2Mbps mode, LE-Long Range mode, Advertising Extensions, Slot Availability Masks ▪ Extended inquiry response (EIR): Shortens the time to retrieve the device name, specific profile, and operating mode ▪ Encryption pause resume (EPR): Enables the use of Bluetooth technology in a much more secure environment ▪ Sniff subrating (SSR): Optimizes power consumption for low duty cycle asymmetric data flow, which subsequently extends battery life. ▪ Secure simple pairing (SSP): Reduces the number of steps for connecting two devices, with minimal or no user interaction required. ▪ Link supervision time out (LSTO): Additional commands added to HCI and link management protocol (LMP) for improved link time-out supervision. ▪ QoS enhancements: Changes to data traffic control, which results in better link performance. Audio, human interface device (HID), bulk traffic. SCO, and enhanced SCO (eSCO) are improved with the erroneous data (ED) and packet boundary flag (PBF) enhancements.
Bluetooth Features	<ul style="list-style-type: none"> ▪ Supports features of Bluetooth Core Specification version 5.2: <ul style="list-style-type: none"> – LE Isochronous Channels – LE Power Control ▪ Supports features of Bluetooth Core Specification version 5.1: <ul style="list-style-type: none"> – Direction Finding (AoA/AoD) – Additional Advertising Channels – Periodic Advertising Sync Transfer (PAST) – GATT Caching ▪ Supports features of Bluetooth Core Specification version 5.0: <ul style="list-style-type: none"> – LE 2Mbps – LE Long Range (LE-LR) – Stable Modulation Index for LE – LE Advertising Extension – Slot Availability Masks (SAM) – Channel Selection Algorithm – High Duty Cycle Non-Connectable Advertising ▪ Supports features of Bluetooth Core Specification version 4.0 + EDR <ul style="list-style-type: none"> – Adaptive frequency hopping (AFH) – Quality of service (QoS) – Extended synchronous connections (eSCO) – Voice Connections – Fast connect (interlaced page and inquiry scans) – Secure simple pairing (SSP)

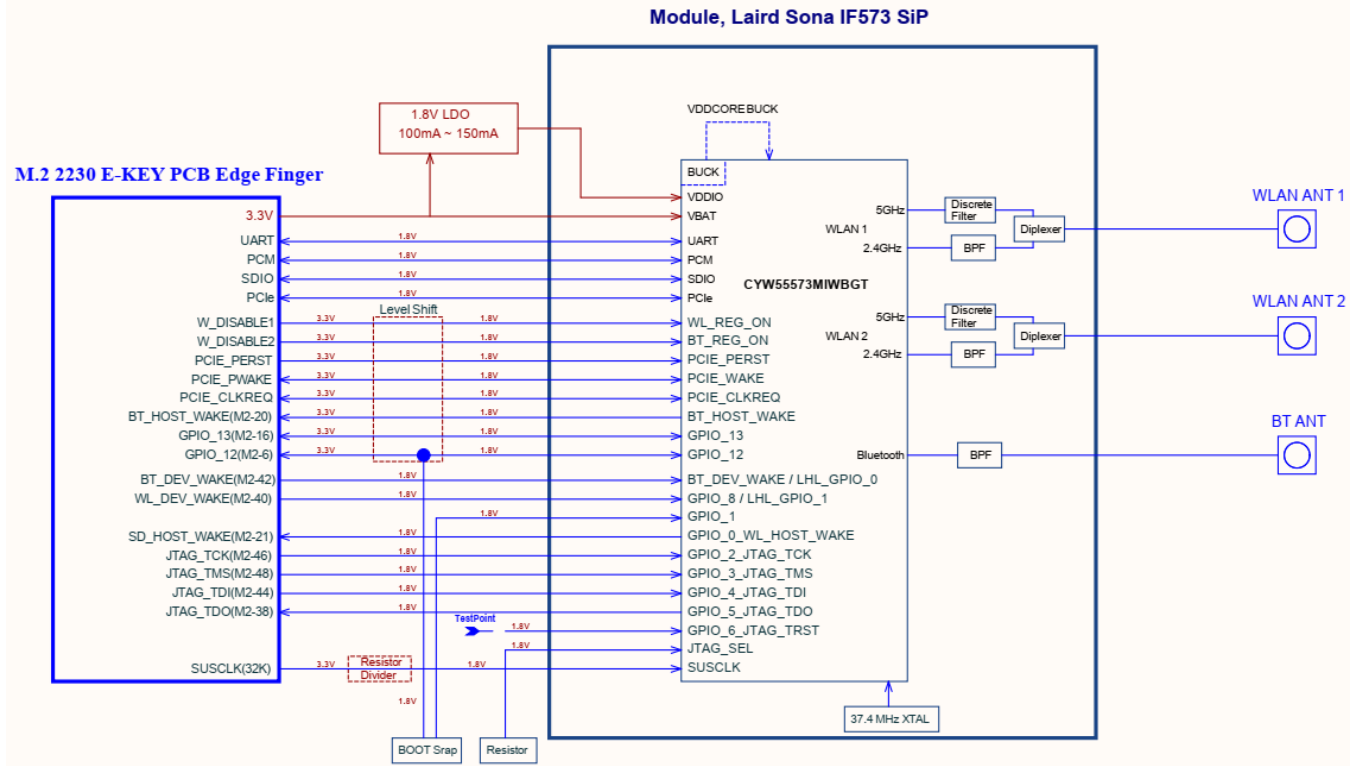

Figure 2: M.2 2230 E-Key

8 ELECTRICAL CHARACTERISTICS

8.1 Absolute Maximum Ratings

Table 6 summarizes the absolute maximum ratings and Table 7 lists the recommended operating conditions for the Sona IF573 series wireless module. Absolute maximum ratings are those values beyond which damage to the device can occur. Functional operation under these conditions, or at any other condition beyond those indicated in the operational sections of this document, is not recommended.

Note: Maximum rating for signals follows the supply domain of the signals.

Table 6: Absolute maximum ratings

Symbol (Domain)	Description	Max Rating	Unit
VBAT	External DC power supply (M.2 1318)	+6.0	V
VDDIO	DC supply voltage for digital I/O (M.2 1318)	2.2	V
3V3	External 3.3V power supply (M.2 2230 E-Key)	4.0	V
Storage	Storage temperature	-40 to +125	°C
Antenna	Maximum RF input (reference to 50-Ω input)	+10	dBm
ESD	Electrostatic discharge tolerance	2000	V

8.2 Recommended Operating Conditions

Table 7: Recommended operating conditions

Symbol (Domain)	Parameter	Min	Typ	Max	Unit
VBAT	External DC power supply	3.13	3.3	3.47	V
VDDIO	DC supply voltage for digital I/O	1.71	1.8	1.89	V
T-ambient	Ambient temperature	-40	25	+85	°C

8.3 DC Electrical Characteristics

Table 8 list the general DC electrical characteristics over recommended operating conditions (unless otherwise specified).

Table 8: General DC electrical characteristics (For 1.8V operation VDDIO)

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
VIH	High Level Input Voltage	—	0.65 x VDDIO	—	—	V
VIL	Low Level Input Voltage	—	—	—	0.35 x VDDIO	V
VOH	Output high Voltage	—	VDDIO – 0.4	—	—	V
VOL	Output low Voltage	—	—	—	0.45	V

8.4 WLAN Radio Receiver Characteristics

Table 9, Table 10, and Table 11 summarize the Sona IF573 series wireless module receiver characteristics.

Table 26: Bluetooth transmitter current consumption (VBAT = 3.3V, VDDIO = 1.8V, WL_REG_ON = OFF)

Operation Mode	Data Rate	VBAT Current Consumption (mA)	VIO Current Consumption (mA)
Basic Data Rate	1DH5	18.9	0.76
	2DH5	18.4	0.77
Enhanced Data Rate	3DH5	18.3	0.77
	1 Mbps	20.3	0.76
Low-Energy	2 Mbps	13.4	0.71
	500 Kbps	17.9	0.75
	125 Kbps	23.6	0.78

Notes:

[1] Dirty Tx is Off.

[2] The Bluetooth LE TX power cannot exceed 10 dBm EIRP specification limit. The front-end losses and antenna gain/loss must be factored in so as not to exceed the limit.

[3] At least 99.9% of all Δf2 maximum frequency values recorded over 10 packets must be greater than 185 KHz.

10 HOST INTERFACE SPECIFICATIONS

10.1 SDIO Specifications

The Sona IF573 series wireless module SDIO host interface pins are powered from the VDDIO voltage supply, which is set internally at 1.8V on the M.2 module. The SDIO electrical specifications are identical for the 1-bit SDIO and 4-bit SDIO modes.

Note: The SDIO host signals must be 1.8V at all times as defined by the M.2 standard.

10.1.1 Default Speed, High-Speed Modes

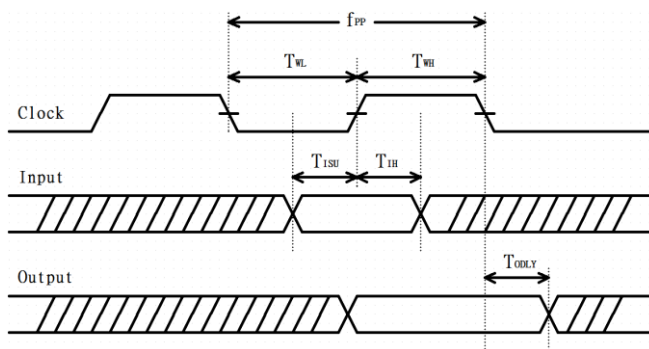

Figure 3: SDIO protocol timing diagram - Default mode (1.8V)

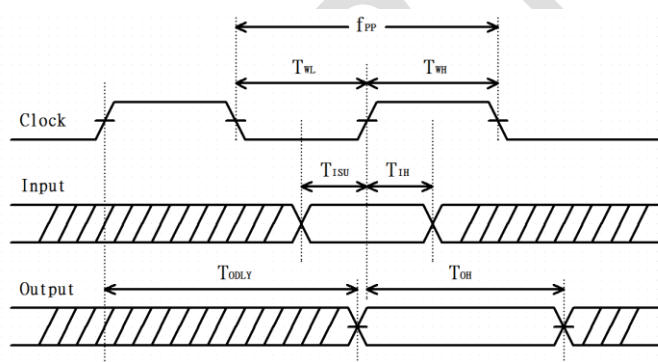

Figure 4: SDIO protocol timing diagram – High-Speed mode (1.8V)

Note: Over full range of values specified in the Recommended Operating Conditions unless otherwise specified.

Table 27: SDIO timing requirements

Symbol	Parameter	Condition	Min.	Typ.	Max.	Unit

T _{ODW}	Output timing pf variable data window	SDR12/25/50	2.88	-	-	ns

10.2 PCI Express Interface

The Sona IF573 series wireless module supports the PCIe interface, which provides high-performance serial I/O interconnects and is also protocol compliant and electrically compatible with the PCI Express Base Specification v3.0 running at Gen2 speeds.

Organization of the PCIe core is in logical layers: Transaction Layer, Data Link Layer, and Physical Layer, as shown in Figure 1. A configuration or link management block is provided for enumerating the PCIe configuration space and supporting generation and reception of System Management Messages by communicating with PCIe layers.

Each layer is partitioned into dedicated transmit and receive units that allow point-to-point communication between the host and Sona IF573 device. The transmit side processes outbound packets whereas the receive side processes inbound packets. Packets are formed and generated in the Transaction and Data Link Layer for transmission onto the high-speed links and onto the receiving device. A header is added at the beginning to indicate the packet type and any other optional fields.

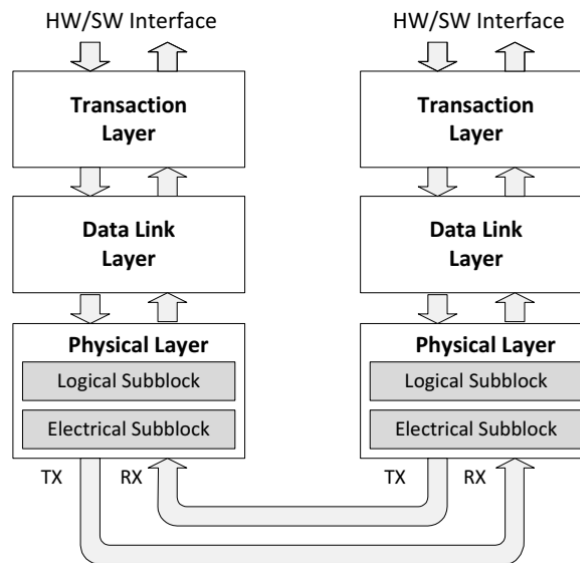

Figure 7: PCI Express Layer Model

10.3 PCM Interface Specifications

10.3.1 PCM Interface

The Sona IF573 series wireless module supports a PCM interface. The PCM interface on the Sona IF573 series wireless module can connect to linear PCM codec devices in Master/Slave mode. In Master mode, the Sona IF573 generates the BT_PCM_CLK and BT_PCM_SYNC signals, and in Slave mode, these signals are provided by another master on the PCM interface and are input to the Sona IF573 module.

The configuration of the PCM interface may be adjusted by the host through the use of vendor-specific HCI commands.

10.4 JTAG Interface

The Sona IF573 supports the JTAG interface for use with proprietary debug and characterization test tools during board bring-up.

Note: The JTAG interface is disabled by default and not exposed on the M.2 2230 E-Key interface.

11 POWER-UP SEQUENCE AND TIMING

Sona IF573 has two signals that allow the host to control power consumption by enabling or disabling the Bluetooth, WLAN, and internal regulator block.

11.1 Description of Control Signals

- **WL_REG_ON:** Used to power up the WLAN. When this pin is high, the internal regulators are enabled and the WLAN section is out of reset. When this pin is low the WLAN section is in reset. This signal is connected to the W_DISABLE1# pin on the M.2 interface.
- **BT_REG_ON:** Used to power up the Bluetooth section. If both the BT_REG_ON and WL_REG_ON pins are low, the regulators are disabled. When this pin is low and WL_REG_ON is high, the Bluetooth section is in reset. This signal is connected to the W_DISABLE2# pin on the M.2 interface.
- **M.2 1318 - VBAT** and VDDIO should not rise 10% - 90% faster than 40 microseconds.
- **M.2 1318 - VBAT** should be up before or at the same time as VDDIO. VDDIO should NOT be present first or be held high before VBAT is high.
- Do not access the digital interface for at least 150 milliseconds after VDDC and VDDIO are available.

70	UIM_POWER_SRC	-	-	NC	NC
71	RESERVED	-	-	NC	NC
72	3.3V	PWR I/P	3.3V	DC supply voltage for module. Operational is 3.13V to 3.6V	--
73	RESERVED	-	-	NC	NC
74	3.3V	PWR I/P	3.3V	DC supply voltage for module. Operational is 3.13V to 3.6V	--
75	GND	-	-	Ground	GND

Note The transmit/receive differential pairs of the PCIe bus include "PERp0", "PERn0", "PETp0" and "PETn0", which have a built-in decoupling capacitor.

13 HOST PLATFORM IMPLEMENTATION DETAILS

13.1 M.2 1318 WLAN Interface Selection

The Sona IF573 M.2 1318 module must be configured for either PCIe or SDIO WLAN interface. Configuration is done with resistor strapping as specified in [Table 38](#).

Table 38: Wi-Fi host interface configuration table

WLAN/Bluetooth Interface	GPIO_1 (Pin24)	LED_1# (Pin 65)
PCIe / UART	H	H
SDIO /UART	L	H

Note: The M.2 2230 E-Key module strapping is implemented on the M.2 carrier board.

13.2 Bluetooth Interface Requirements

The CYW55573 Bluetooth CPU core requires the UART_CTS input to be held low at the point the BT_REG_ON (W_DISABLE2#) signal goes high to enable secure firmware download. In addition, the HCI interface uses the standard H4 protocol which requires four-wire hardware handshaking.

This requires that the host implement GPIO control over BT_REG_ON/W_DISABLE2# and implement full RTS/CTS handshaking.

13.3 Low Power Clock

The Sona IF573 requires a 32KHz clock on the SUSCLK input. This clock drives various internal state machines and must be provided by the host even if low power operation is not needed.

13.4 M.2 1318 WL_DEV_WAKE Mapping

The WL_DEV_WAKE feature is mapped to different pins on the M.2 1318 module depending on the WLAN interface selection. See [Table 39](#) for details.

Table 39: M.2 1318 WL_DEV_WAKE Mapping

WLAN Interface	M.2 1318 Pin	Internal GPIO
PCIe	22	GPIO_8
SDIO	18	LHL_GPIO1

Note: This feature is subject to software support and not currently implemented.

14 MECHANICAL SPECIFICATIONS

14.1 M.2 1318

Module dimensions of Sona IF573 M.2 1318 package is 18 x 13 x 1.9 mm. Detailed drawings are shown in [Figure 20](#)

Figure 20: M.2 1318

Figure 21: M.2 1318 (MHF4 variant) – Top View

Figure 22: M.2 1318 (trace antenna variant) – Top View

14.2 M.2 2230 E-Key

Module dimensions of Sona IF573 M.2 2230 E-Key module is 22 x 30 x 2.7 mm. Detailed drawings are shown in [Figure 23](#).

Figure 23: Sona IF573 M.2 2230

Note: The Wi-Fi MAC address is located on the product label.
The last digit of Wi-Fi MAC address is assigned to either 0, 2, 4, 6, 8, A, C, E.
The BT MAC address is the Wi-Fi MAC address plus 1.

14.3 M.2 2230 E-Key Mounting

The Sona IF573 M.2 2230 E-Key module connects to the host via a standard PCI EXPRESS M2 connector.

Kyocera's 6411 series provides 1.8mm, 2.3mm and 3.2mm connector heights. JAE's SM3 series provides 1.2mm, 2.15mm, 3.1mm and 4.1mm connector heights.

The Sona IF573 M.2 2230 E-Key module is a single-sided component module so we recommend the connectors listed in [Table 40](#).

Table 40: Recommended M.2 2230 E-Key Connectors

M.2 Key-E Connector	Connector Height
KYOCERA 24-6411-067-101-894E	2.3 mm
JAE SM3ZS067U310AERxxxx	3.1 mm

The corresponding standoffs are listed in [Table 41](#).

Table 41: Recommended M.2 E-Key Standoffs

M.2 Key-E Connector	Stand-off
KYOCERA 24-6411-067-101-894E	EMI STOP F50M16-041525P1D4M
JAE SM3ZS067U310AERxxxx	JAE SM3ZS067U310-NUT1-Rxxxx

Detailed layout and stencil opening are show in [Figure 24](#).

Figure 24: M.2 2230 E-Key connector/standoff mounting

15 RF LAYOUT DESIGN GUIDELINES

The following is a list of RF layout design guidelines and recommendation when installing a Laird Connectivity radio into your device.

- Do not run antenna cables directly above or directly below the radio.
- Do not place any parts or run any high-speed digital lines below the radio.
- Ensure that there is the maximum allowable spacing separating the antenna connectors on the Laird Connectivity radio from the antenna. In addition, do not place antennas directly above or directly below the radio.
- Laird Connectivity recommends the use of a double-shielded cable for the connection between the radio and the antenna elements.
- Be sure to put a 10uF/16V/0603 capacitor on EACH 3.3V power pin. Place the capacitor as close as possible to the pin to ensure correct PMU operation.
- Use proper electro-static-discharge (ESD) procedures when installing the Laird Connectivity radio module. To avoid negatively impacting Tx power and receiver sensitivity, do not cover the antennas with metallic objects or components.

16 APPLICATION NOTES

16.1 Introduction

Laird Connectivity's surface mount modules are designed to conform to all major manufacturing guidelines. This application note is intended to provide additional guidance beyond the information that is presented in the user manual. This application note is considered a living document and will be updated as new information is presented.

The modules are designed to meet the needs of several commercial and industrial applications. They are easy to manufacture and conform to current automated manufacturing processes.

16.2 Shipping and Labelling

16.2.1 M.2 1218 Solder-Down

Figure 25: Sona IF573 Reel specifications, 161-00459: Sona IF573 Reel specifications, 161-00459

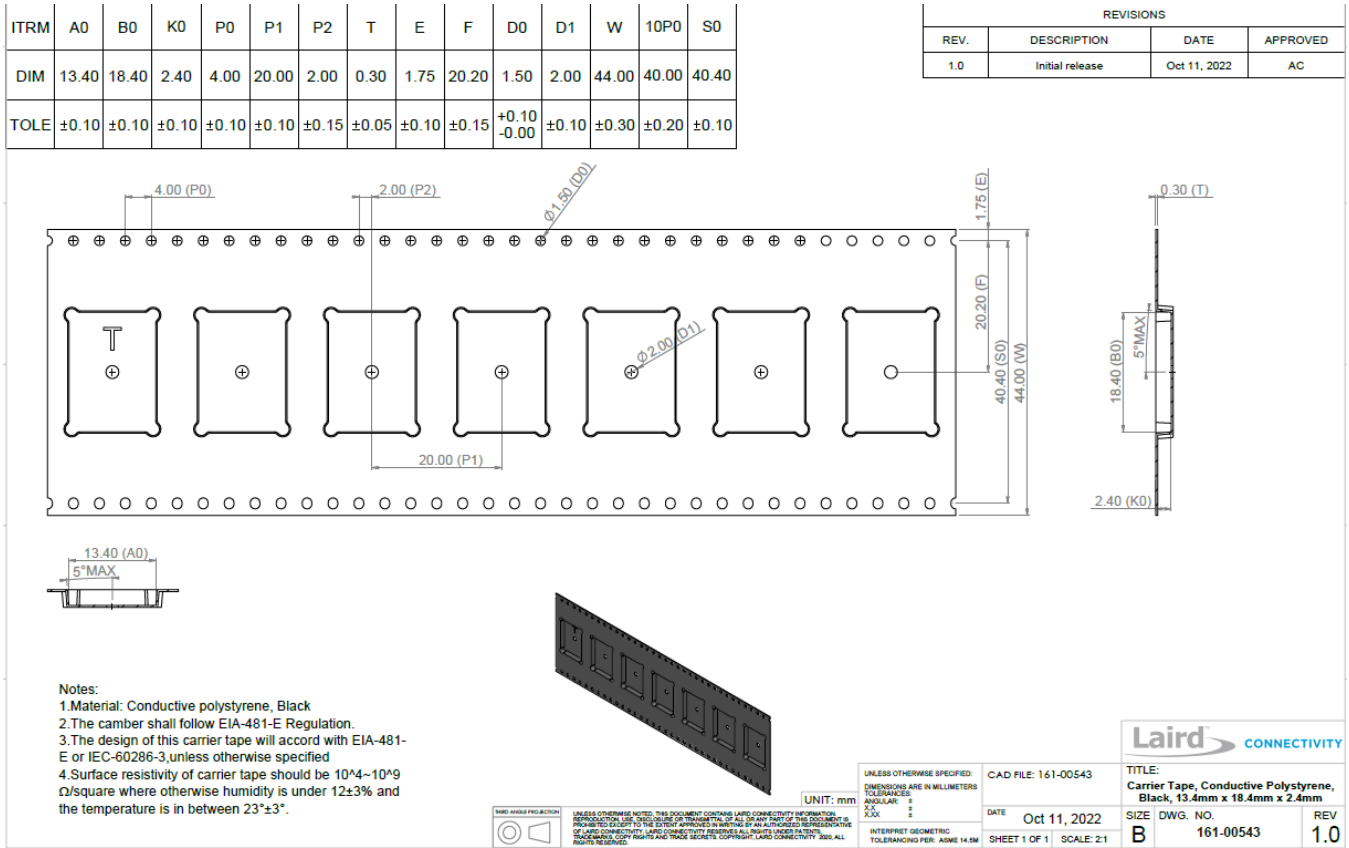

Figure 26: Sona IF573 Tape specifications, 161-00543

There are 1,000 Sona IF573 modules taped in a reel (and packaged in a pizza box) and three boxes per carton (3,000 modules per carton). Reel, boxes, and carton are labeled with the appropriate labels. See Figure 27 for more information.

ITEM NO.	PART NUMBER	REV.	DESCRIPTION	QTY.

16.3 Required Storage Conditions

16.3.1 Prior to Opening the Dry Packing

The following are required storage conditions **prior to opening the dry packing**:

- Normal temperature: 5~40°C
- Normal humidity: 80% (Relative humidity) or less
- Storage period: One year or less

Note: Humidity means relative humidity.

16.3.2 After Opening the Dry Packing

The following are required storage conditions **after opening the dry packing** (to prevent moisture absorption):

- Storage conditions for one-time soldering:
 - Temperature: 5-25°C
 - Humidity: 60% or less
 - Period: 72 hours or less after opening
- Storage conditions for two-time soldering
 - Storage conditions following opening and prior to performing the 1st reflow:
 - Temperature: 5-25°C
 - Humidity: 60% or less
 - Period: A hours or less after opening

- Storage conditions following completion of the 1st reflow and prior to performing the 2nd reflow
 - Temperature: 5-25°C
 - Humidity: 60% or less
 - Period: B hours or less after completion of the 1st reflow

Note: Should keep A+B within 72 hours.

16.3.3 Temporary Storage Requirements after Opening

The following are temporary storage requirements after opening:

- Only re-store the devices once prior to soldering.
- Use a dry box or place desiccant (with a blue humidity indicator) with the devices and perform dry packing again using vacuumed heat-sealing.

The following indicate the required storage period, temperature, and humidity for this temporary storage:

- Storage temperature and humidity:

- Storage period:
 - X1+X2 – Refer to [After Opening the Dry Packing](#) storage requirements. Keep is X1+X2 within 72 hours.
 - Y – Keep within two weeks or less.

16.4 Baking Conditions

Baking conditions and processes for the module follow the J-STD-033 standard which includes the following:

- The calculated shelf life in a sealed bag is 12 months at <40°C and <80% relative humidity.
- Once the packaging is opened, the SiP must be mounted (per MSL4/Moisture Sensitivity Level 4) within 72 hours at <30°C and <60% relative humidity.
- If the SiP is not mounted within 72 hours or if, when the dry pack is opened, the humidity indicator card displays >10% humidity, then the product must be baked for 48 hours at 125 °C (±5 °C).

17 SURFACE MOUNT CONDITIONS

The following soldering conditions are recommended to ensure device quality.

17.1 Recommended Stencil Aperture

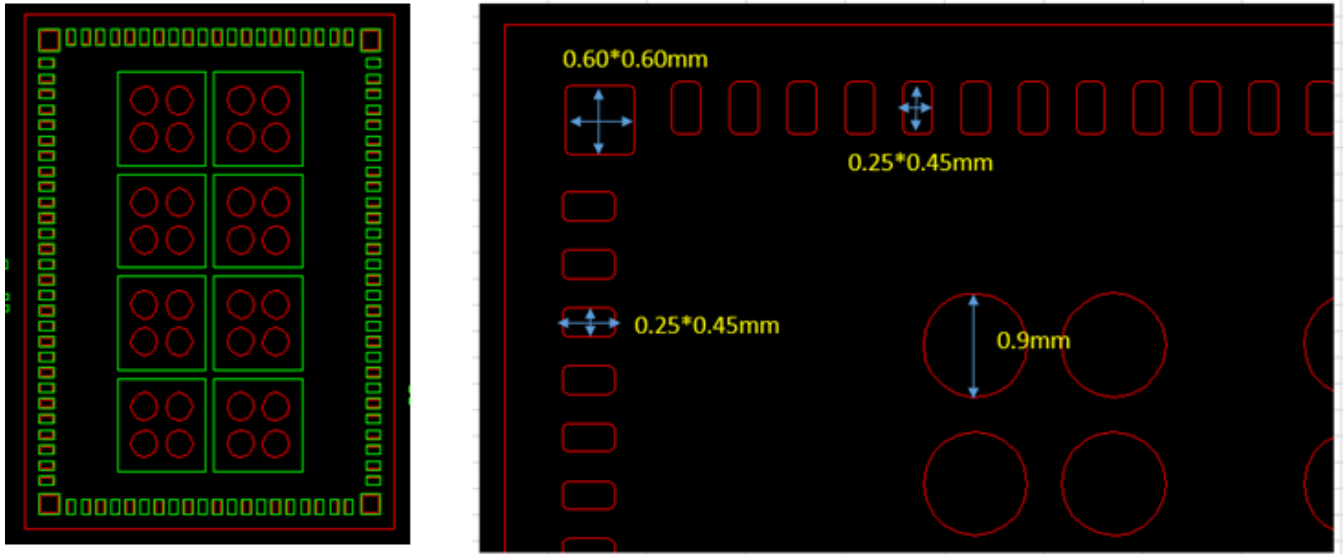

Figure 37: Sona IF573 M.2 1318 stencil aperture

Note: The stencil thickness is 0.12mm

17.2 Soldering

Note: When soldering, the stencil thickness should be 0.12 mm.

Convection reflow or IR/Convection reflow (one-time soldering or two-time soldering in air or nitrogen environment)

Measuring point – IC package surface

Temperature profile:

Figure 38: Temperature profile

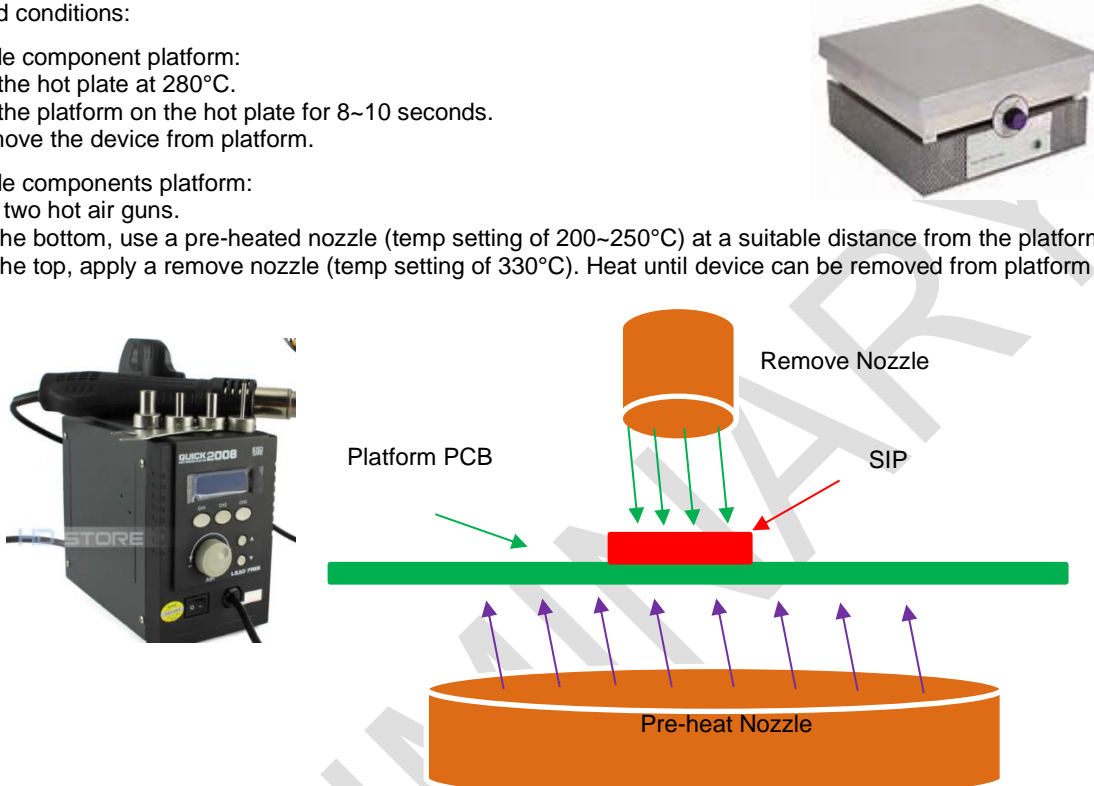

- Solder paste alloy: SAC305(Sn96.5 / Ag3.0 / Cu 0.5)
- Pre-heat temperature: 150°C ~ 200°C; Soak time: 60 second ~ 120 second
- Peak temperature: 235°C ~ 250°C
- Time above 220°C: 40 second ~ 90 second
- Optimal cooling rate < 3°C/second
- The oxygen concentration < 2000 ppm

17.2.1 Cautions When Removing the M.2 1318 from the Platform for RMA

- Bake the platform before removing the Sona IF573 module from the platform. Reference [Baking Conditions](#).
- Remove the Sona IF573 module by using a hot air gun. This process should be carried out by a skilled technician.

Recommended conditions:

- One-side component platform:
 - Set the hot plate at 280°C.
 - Put the platform on the hot plate for 8~10 seconds.
 - Remove the device from platform.
- Two-side components platform:
 - Use two hot air guns.
 - On the bottom, use a pre-heated nozzle (temp setting of 200~250°C) at a suitable distance from the platform PCB.
 - On the top, apply a remove nozzle (temp setting of 330°C). Heat until device can be removed from platform PCB.

- Remove the residue solder under the bottom side of device. (NOTE: Alternate module pictured as an example)

(Not accepted for RMA)

Figure 39: Example M.2 1318 with residue solder on the bottom

(Accepted for RMA analysis)

Figure 40: Sona IF573 module without residue solder

- Remove and clean the residue flux as needed.

17.2.2 Precautions for Use

- Opening/handling/removing must be done on an anti-ESD treated workbench. All workers must also have undergone anti-ESD treatment.
- The devices should be mounted within one year of the date of delivery.
- The Sona IF573 modules are MSL level 4 rated.

18 RELIABILITY TEST

The Sona IF573 modules were tested for reliability. Test items and the corresponding standards are shown in [Table 42](#).

18.1 Environmental and Mechanical

The following are the followed reliability test procedures.

Table 42: Sona IF573 M.2 1318 Solder-down Module Reliability Test Items and Standards

Test Item	Specification	Standard	Test Result
Step 1: Pre-conditioning	Pre-check: <ol style="list-style-type: none"> Function check (Tools and SOP supplied by customers). Mechanical check. 	JESD22-A113	Pass
	Pre-conditioning: <ol style="list-style-type: none"> Bake: 125°C for 24 hours. Moisture Soak: 30°C/60% RH for 192 hours Not shorter than 15 minutes and not longer than 4 hours after removal from the temperature/humidity chamber, subject the sample to 3 cycles of the reflow. 		
Step 2: Temperature Cycling Non-operating	Post-check: <ol style="list-style-type: none"> Function check (Tools and SOP supplied by customers). Mechanical check. Perform inspections of short, open, delamination of DUTs by Optical Microscope (under 40X optical magnification). X-RAY / CSAM (SAT) on any failed samples (Notify customers). Cross-sections analysis based on X-RAY and CSAM results. 	JESD22-A113	Pass
	<ol style="list-style-type: none"> Dwell on -40°C for 15 minutes Shock to 85°C with in ramp rate 15 °C/minute Dwell on 85°C for 15 minutes Shock to -40°C with in ramp rate 15 degree C/minute Repeat step 1-4 and stop to check functions at 500/ 700 cycles

PRELIMINARY

19 REGULATORY

Note: For complete regulatory information, refer to the Sona IF573 Regulatory Information document which is also available from the [Sona IF573 product page](#).

The Sona IF573 holds current certifications in the following countries:

Country/Region	Regulatory ID
USA (FCC)	SQG-SONAIF573
EU	N/A
UKCA	N/A
Canada (ISED)	3147A-SONAIF573
Japan (MIC)	201-220656
Australia	N/A
New Zealand	N/A

19.1 Certified Antennas

The Sona IF573 module was tested with antennas listed in the following table. The OEM can choose a different manufacturer's antenna but must make sure it is of same type and that the gain is lesser than or equal to the antenna that is approved for use.

Manufacturer	Model	Laird Connectivity Part Number	Type	Connector	Peak Gain (dBi)		
					2.4 GHz	5 GHz	6 GHz
Laird Connectivity	FlexMIMO 6E	EFD2471A3S-10MH4L	PIFA	MHF4L	2.2	3.8	3.3
Laird Connectivity	FlexPIFA 6E	EFB2471A3S-10MH4L	PIFA	MHF4L	2.2	3.9	3.8
Laird Connectivity	Mini NanoBlade Flex 6 GHz	EMF2471A3S-10MH4L	PCB Dipole	MHF4L	2.4	4.4	5.2
JOYMAX	Dipole 6E	TWX-100BRSAX-2001	Dipole	RS-SMA	2	4.0	4.0

20 BLUETOOTH SIG QUALIFICATION

20.1 Overview

The Sona IF573 Series module is listed on the Bluetooth SIG website as a qualified Controller Subsystem.

Design Name	Owner	Declaration ID	Link to listing on the SIG website
Sona IF573	Laird Connectivity	D057578	https://launchstudio.bluetooth.com/ListingDetails/158180

It is a mandatory requirement of the Bluetooth Special Interest Group (SIG) that every product implementing Bluetooth technology has a Declaration ID. Every Bluetooth design is required to go through the qualification process, even when referencing a Bluetooth Design that already has its own Declaration ID. The Qualification Process requires each company to register as a member of the Bluetooth SIG – www.bluetooth.org

The following is a link to the Bluetooth Registration page: <https://www.bluetooth.org/login/register/>

For each Bluetooth Design, it is necessary to purchase a Declaration ID. This can be done before starting the new qualification, either through invoicing or credit card payment. The fees for the Declaration ID will depend on your membership status, please refer to the following webpage:

<https://www.bluetooth.org/en-us/test-qualification/qualification-overview/fees>

For a detailed procedure of how to obtain a new Declaration ID for your design, please refer to the following SIG document, (login is required to view this document):

https://www.bluetooth.org/DocMan/handlers/DownloadDoc.ashx?doc_id=283698&vId=317486

20.2 Qualification Steps When Referencing a Laird Connectivity Controller Subsystem Design

To qualify your product when referencing a Laird Connectivity Controller Subsystem design, follow these steps:

1. To start a listing, go to: https://www.bluetooth.org/tpg/QLI_SDoc.cfm

Note: A user name and password are required to access this site.

2. In step 1, select the option, New Listing and Reference a Qualified Design.
3. Enter D057578 in the Controller Subsystem table entry.
4. Enter your complimentary Host Subsystem and optional Profile Subsystem QDID in the table entry.
5. Select your pre-paid Declaration ID from the drop-down menu or go to the Purchase Declaration ID page.

Note: Unless the Declaration ID is pre-paid or purchased with a credit card, you cannot proceed until the SIG invoice is paid.

6. Once all the relevant sections of step 1 are finished, complete steps 2, 3, and 4 as described in the help document accessible from the site.

Your new design will be listed on the SIG website and you can print your Certificate and DoC.

For further information please refer to the following training material:

<https://www.bluetooth.org/en-us/test-qualification/qualification-overview/listing-process-updates>

If you require assistance with the qualification process please contact our recommended Bluetooth Qualification Expert (BQE), Steve Flooks, steve.flooks@eurexuk.com.
